Published on *Digital Agenda for Europe* (https://ec.europa.eu/digital-agenda)

Do you have a great idea for a new technology that is not possible yet? Could it become real if Europe's best minds were put on the task? Share your view and the European Commission can make it happen via the Future and Emerging Technologies (FET) programme [1].

The consultation closed on 30 June 2014.

We thank you for your participation and the nearly 500 contributions received. Please read the results and the work in progress for the identification of potential candidate topics [2] for FET Proactive.

The aim of the public consultation launched [3]was to identify promising and potentially game-changing directions for future research in any technological domain.

The consultation was organised as a series of discussions, in which contributors can suggest ideas for a new FET Proactive initiative or discuss the 9 research topics identified in the previous consultation to determine whether they are still relevant today:

- Ideas for new topics (what's new that isn't in the other 9 topics?) [4]
- Bottom-up intelligent construction [5]
- Constructive symbiosis [6]
- Ecological technology [7]
- Global Systems Science [8]
- Knowing, doing and being [9]
- Nano-optomechanical technologies [10]
- New possibilities at the nano-bio-chem interface [11]
- Quantum technologies [12]
- Time for time [13]

Join Consultation for new FET Proactive topics [14]
