European Commission

Towards a Strategic Transport Research and Innovation Agenda (STRIA)

Meeting the transport stakeholders

Take aways:

- Transport decarbonisation is possible through integration of sectors and technologies and a systemic approach.
- Meeting users and citizens' demand will be key for the uptake of innovations in transport
- Electrification and connected and automated transport are key priorities in the R&I agenda together with related infrastructure and services
- In parallel, overall energy consumption to be reduced through R&I actions addressing efficiency in the transport system and in relevant modes
- Stable and favourable regulatory framework and conditions for low carbon technologies in transport is addressed in EURICS
- STRIA will not be a once-off exercise: we need to set up a mechanism to implement, monitor and follow up the transport agenda in coordination with Member States, regional authorities and cities and in cooperation with research community and the private sector
