

EUROPEAN COMMISSION

Competition DG

## *8<sup>th</sup> Report on the Monitoring of Patent Settlements*

*(period: January-December 2016)*

*Published on 9 March 2018*

### **1. Introduction**

- (1) As announced in the Commission's Communication<sup>1</sup> concluding the pharmaceutical sector inquiry on 8 July 2009, it is considered important to continue monitoring the patent settlements between originator and generic companies. The main objectives of the monitoring exercise are to better understand the use of this type of agreement in the EEA and to identify those settlements that delay generic market entry to the detriment of the European consumer possibly in violation of European competition law.<sup>2</sup> This eighth round of monitoring is a follow-up to the seven monitoring exercises conducted annually from 2010 to 2016.<sup>3</sup>
- (2) Patent settlement agreements, as examined in this context, are commercial agreements to settle patent-related disputes, e.g. questions of patent infringement or patent validity. They are concluded in the context of patent disputes, opposition procedures or litigation where no final adjudication has been handed down. Although the content of individual settlements will vary according to the circumstances of the case, the common aim of a settlement is to end the disagreement.

---

[http://ec.europa.eu/competition/sectors/pharmaceuticals/inquiry/patent\\_settlements\\_report7\\_en.pdf](http://ec.europa.eu/competition/sectors/pharmaceuticals/inquiry/patent_settlements_report7_en.pdf).

- (3) As in any other area of commercial disagreement, the parties concerned have a legitimate interest in finding a mutually acceptable compromise. In particular the parties may prefer to discontinue the dispute or litigation because it is too costly, time-consuming and/or risky as regards its outcome. Settlements are thus a generally accepted, legitimate way of ending private disagreements. They can also save courts and/or competent administrative bodies such as patent offices time and effort. Therefore, they can have some positive impact in the interest of society.
- (4) However, as pointed out in the Final Report of the sector inquiry ("Final Report"), some patent settlements in the pharmaceutical sector may prove to be problematic from a competition law perspective. Of particular interest are settlements that may lead to a delay of generic entry in return for a value transfer (e.g. a payment) by the originator company to the generic company. Other examples of possibly problematic agreements relate to settlements that contain restrictions beyond the exclusionary zone of the patent, meaning that they would reach beyond its geographic scope, its period of protection or its exclusionary scope. Such agreements would not appear to be directly related to the IP rights granted by the patents concerned. Furthermore, problematic agreements include settlement agreements on a patent which the patent holder knows does not meet the patentability criteria. An example of this is a situation where the patent was granted following the provision of incorrect, misleading or incomplete information. Ultimately, it may be the consumer who pays the price for a delay in market entry resulting from such agreements and therefore any benefits to society are more than outweighed by the negative effects of the agreement between potential competitors. In this context, obviously, an assessment of each individual case would be necessary.
- (5) The Competition DG launched the eighth monitoring exercise into patent settlements in May 2017 covering the time period from 1 January 2016 to 31 December 2016. Formal requests for information were sent to originator companies and generic companies, which had cooperated with the Commission in the course of the sector inquiry and/or were reported in the specialised press as having concluded a patent settlement in the period in question.
- (6) This report sets out the results of the eighth monitoring exercise. The first section recalls the main classifications of patent settlements as set out in detail in the Final Report. It then provides the overview of the replies submitted by companies, including an analysis of the main characteristics of the settlements falling within particular categories. The final section contains some brief conclusions.
- (7) As in the previous monitoring reports the classification of settlements is aimed at giving an indication on which kinds of settlements may merit further competition rules scrutiny and their relative importance. But any concrete case will have to be examined under its own individual circumstances and merits.

## **2. Classification of the agreements**

- (8) This report uses the categorisation of patent settlement agreements proposed in the Final Report of the Pharmaceutical Sector Inquiry. It is useful to underline that this report is written from a competition law perspective and does not put into question

the patent system or its procedure or criteria for granting exclusive rights. The classification is based on two main criteria, firstly, whether the agreement foresees a limitation on the generic company's ability to market its own medicine and secondly, whether it foresees a value transfer from the originator to the generic company.<sup>4</sup>

- (9) A generic company's ability to enter the market can be limited in several ways. The most straightforward limitation is a clause explicitly stating that the generic company will refrain from challenging the validity of the originator company's patent(s) ("non-challenge clause") and/or refrains from entering the market until the patent(s) has(ve) expired ("non-compete clause"). For the purpose of this report, a licence granted by the originator company allowing the generic to be on the market is also categorised as limiting generic entry, if the generic company cannot enter the market with its own product or it cannot set the conditions for the commercialisation of its product freely.<sup>5</sup> Accordingly, the generic company's entry is at least partly controlled by the originator company through the terms of the licence agreement. Note though, that an exception applies in case of royalty free licences that allow generic companies to immediately launch their own product without any further constraints, i.e. concerning quantities, composition, pricing or other marketing conditions of their product. Hence, such licence agreements are not viewed as limiting generic entry.
- (10) The same logic as referred to in paragraph (9) applies to patent settlement agreements in which the parties agree that the generic company will be a distributor of the originator product concerned or if the generic company will source its supplies of the active pharmaceutical ingredient (API) from the originator company.
- (11) Furthermore, agreements providing for an early entry of a generic medicine will be seen as limiting generic entry where entry is not immediate. It should be noted that the list of potential limitations is not exhaustive.
- (12) The value transfer from the originator company to the generic company can take different forms. The most clear-cut value transfer is a direct monetary transfer (e.g. payment of a lump sum) from the originator company to the generic company. According to the settlement terms, such a monetary transfer can, for example, have the purpose of purchasing an asset (e.g. the generic company's stock of own products), but it can also have the purpose – explicitly or implicitly – of paying the generic company for agreeing to delay the product launch and/or for discontinuing the patent challenge, even in situations where stock is bought at market price. It is considered that originator companies are able to afford such payments as the settlement allows the company to continue reaping the benefits of its well-selling medicine. Other types of value transfer include distribution agreements or a "side-

---

<sup>4</sup> For the purpose of this report, it was not verified whether any settlement relates to patents where the patent holder (or both parties) know that the patent does not meet the patentability criteria or whether it contains restrictions exceeding the exclusionary zone of the patent invoked.

<sup>5</sup> This categorisation is done for competition law purposes only. It does not prejudice the right of patent owners to assign, or transfer by succession, the patent and to conclude licensing contracts as declared in Article 28(2) TRIPS.

deal" in which the originator company grants a commercial benefit to the generic company, for example by allowing it to enter the market before patent expiry in another geographical area or by allowing market entry with another product marketed by the originator company. A value transfer could furthermore consist in granting a licence to the generic company enabling it to enter the market. Similarly, a non-assert clause, whereby - even without a licence - the originator binds itself not to invoke the patent against the generic company, thereby allowing the generic medicine to come to market, may technically be perceived as constituting a value transfer. In these cases, the generic gained marketable value as a result of the value transfer. However, an agreement which includes no other limitative provision than determining the date of the generic entry with the originator's undertaking not to challenge such entry (a "pure early entry") is not likely to attract the highest degree of antitrust scrutiny. Again the list of possible value transfers is not exhaustive.

- (13) For any of the value transfers observed in this monitoring exercise, the Commission only investigated whether such a transfer was agreed upon, without verifying the (net) amount of the transfer or any possible justifications for it. There is no presumption of violation of competition rules. A case by case analysis would be required. For instance, in some cases, an early entry may be pro-competitive when compared to the parties' anticipated outcome of the litigation. In other instances, the conditions attached to the early entry (through a licence or a distribution agreement) may cancel out any positive effect on competition.
- (14) In line with the above, agreements that do not restrict the generic company's ability to market its own product are categorised as A-type, while those limiting generic entry are categorised as B-type. Agreements limiting generic entry are further categorised in two groups: (i) B.I settlements, which comprise those settlements where no value transfer from the originator to the generic company took place; and (ii) B.II settlements which foresee a value transfer from the originator to the generic company.
- (15) Typically, category A settlements should be unproblematic from a competition law perspective, as they allow immediate market entry by the generic company with its own product (unilateral conduct of the originator company that might have caused generic delay would remain subject to competition law scrutiny).
- (16) The same applies to category B.I settlements. Nonetheless, some settlement agreements in this category may attract competition law scrutiny. This may be the case for settlements concluded outside the exclusionary zone of the patent and/or settlement agreements on a patent for which the patent holder (or both parties) know that the patent does not meet the patentability criteria, e.g. where the patent was granted following the provision of incorrect, misleading or incomplete information.
- (17) By contrast category B.II settlements are likely to attract the highest degree of antitrust scrutiny since they limit access to the market and contain a value transfer from the originator to the generic. Nonetheless, this is not to suggest that agreements falling into this category would necessarily be incompatible with EU competition law. This needs to be assessed on the basis of the circumstances of each individual case.

- (18) Table 1 below provides an overview of the main categories as used by the Commission in the sector inquiry and for the purpose of the monitoring exercise.

*Table 1: Categories*

		Limitation on generic entry	
		No	Yes
Value transfer from the originator company to the generic company	No	Category A	Category B.I.
	Yes		<b>Category B.II.</b>

### 3. The monitoring exercise 2017

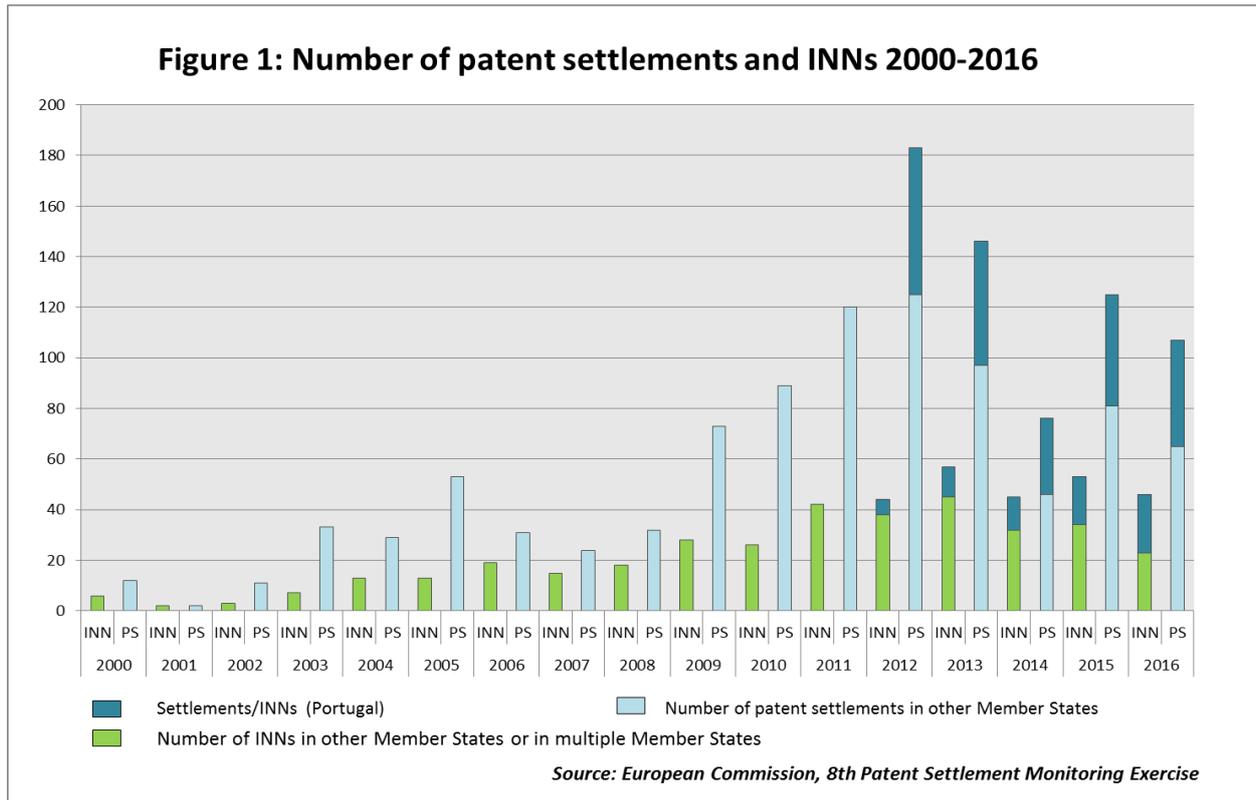

- (19) The monitoring exercise was launched in May 2017 and covered the period from 1 January 2016 to 31 December 2016. In total 57 originator and 50 generic companies replied to the Commission's request to submit copies of all patent settlement agreements relevant for the EU/EEA. These companies were selected from the originator companies and generic companies that had cooperated with the Commission in the course of the sector inquiry<sup>6</sup> including the subsequent monitoring exercises and/or were reported in the specialised press as having concluded a patent settlement in the period in question. Hence it constitutes a representative sample of the industry. In order to minimise the administrative burden on the companies, they were asked to submit a copy of the agreements together with copies of all annexes, related agreements and amendments concluded between originator and generic companies and only limited additional background information.
- (20) The statistics provided below, which are based on the companies' replies, concern only patent settlements in the narrow sense (i.e. settling a patent dispute, opposition procedure or litigation). Where other agreements were submitted within the monitoring exercise, they were also analysed with respect to the question whether they amount to a side deal/related agreement but were otherwise disregarded.

#### 3.1. Some general statistics of the patent settlements submitted to the Commission

- (21) The development of patent settlements from the beginning of 2000 until the end of 2016 can be described by consolidating the data obtained in the course of the sector inquiry and in the course of the previous monitoring exercises with the information newly acquired during this monitoring exercise.
- (22) Figure 1 shows the annual numbers of patent settlements concluded during 2000 – 2016 as well as the numbers of INNs<sup>7</sup> covered by the patent settlements in each year.

<sup>6</sup> During the sector inquiry 43 originator companies and 27 generic companies had been selected for in-depth analysis.

<sup>7</sup> An INN is the international non-proprietary name for a pharmaceutical substance.

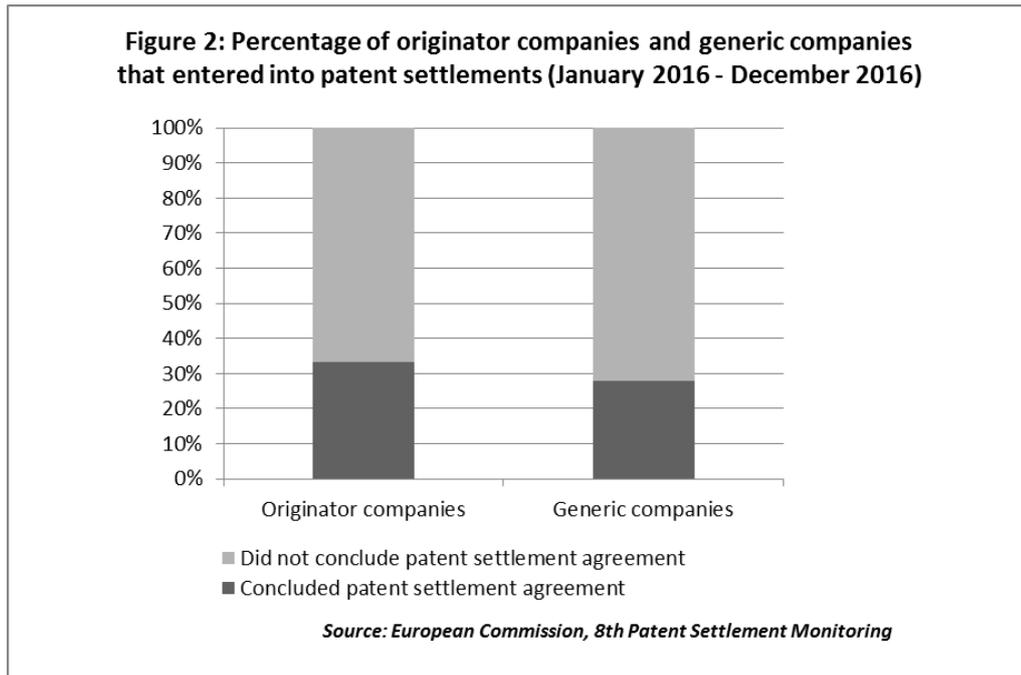

(23) The 8<sup>th</sup> PSM exercise shows a total of 107<sup>8</sup> settlements for the year 2016. At the beginning of the monitoring period the number of patent settlement agreements was comparatively low, whereas after 2008 an increase can be observed, with a peak of 183 in 2012<sup>9</sup>. Thereafter the number of settlements again decreased, remaining however above the average of 24 in the period 2000-2008. The number of patent settlements may vary for a variety of reasons, such as the number of medicines losing patent protection, the greater readiness of both parties to settle, a general increase in litigation and disputes leading to a higher number of settlements or the introduction of new legislation. Figure 1 also shows that the number of INNs (46 in 2016) remained relatively stable over the last years.

(24) Figure 2 shows the percentages of originator and generic companies involved in this monitoring exercise that concluded patent settlements. 19 out of the 57 originator companies (33%) and 14 out of the 50 generic companies (28%) concluded a settlement agreement in 2016. These percentages compare as follows with previous monitoring exercises: 22% of originator companies concluded settlement agreements in 2010, 44% in 2011, 38% in 2012, 37% in 2013, 35% in 2014, and 40% in 2015, whereas 23% of generic companies concluded settlement agreements in 2010, 16% in 2011, 30% in 2012, 35% in 2013, 21% in 2014, and 30% in 2015.<sup>10</sup>

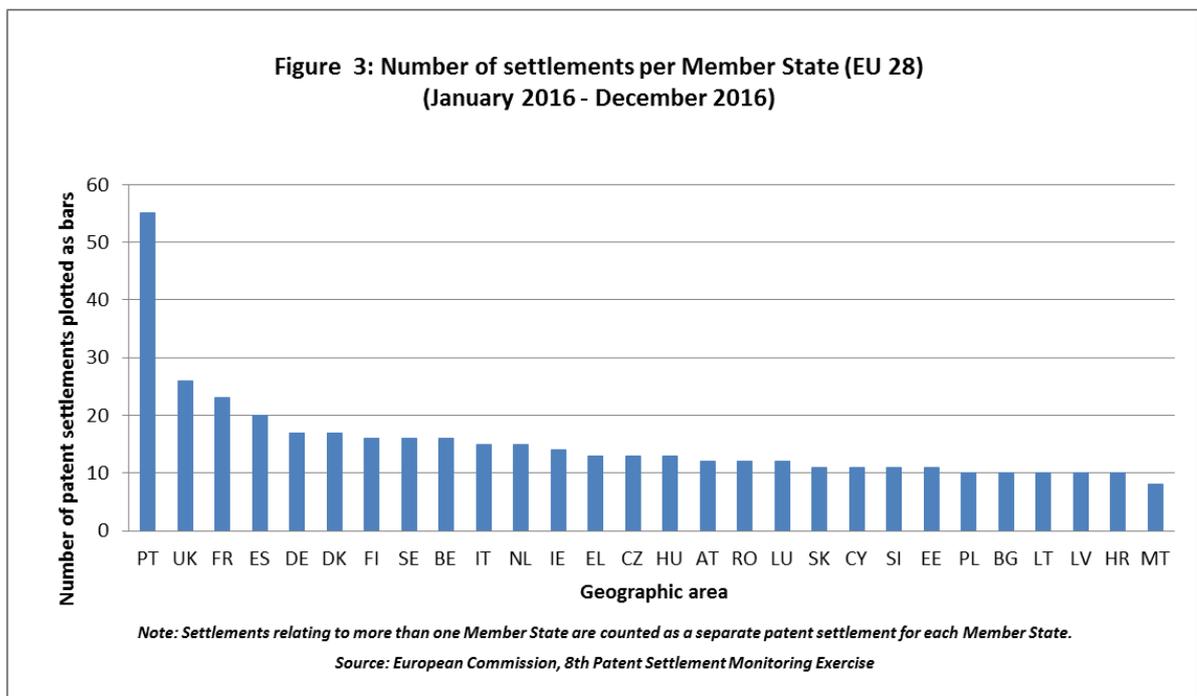

<sup>8</sup> Of which 22 concern one and the same INN.

<sup>9</sup> As in the previous monitoring exercises since 2012, specific legislation in Portugal, as described in paragraph (27), has entailed the conclusion of many settlements during 2016. Ignoring the settlements related to this legislation ("PT-related"), the total number of settlements for 2016 is 65.

<sup>10</sup> Regarding these figures and the comparison with the Sector Inquiry, please see also third monitoring report published in July 2012, p. 7, cited in footnote 3.

(25) Figure 3 breaks down the number of patent settlements by geographic area covered by the agreements. Every agreement accounted for in Figure 3 covered at least one EU Member State. A minority of the settlements covered more than one Member State. For the purpose of this figure, settlements relating to more than one Member State are counted as a separate patent settlement for each Member State (which explains why the sum of the settlements per Member States exceeds the total number of settlements reported).

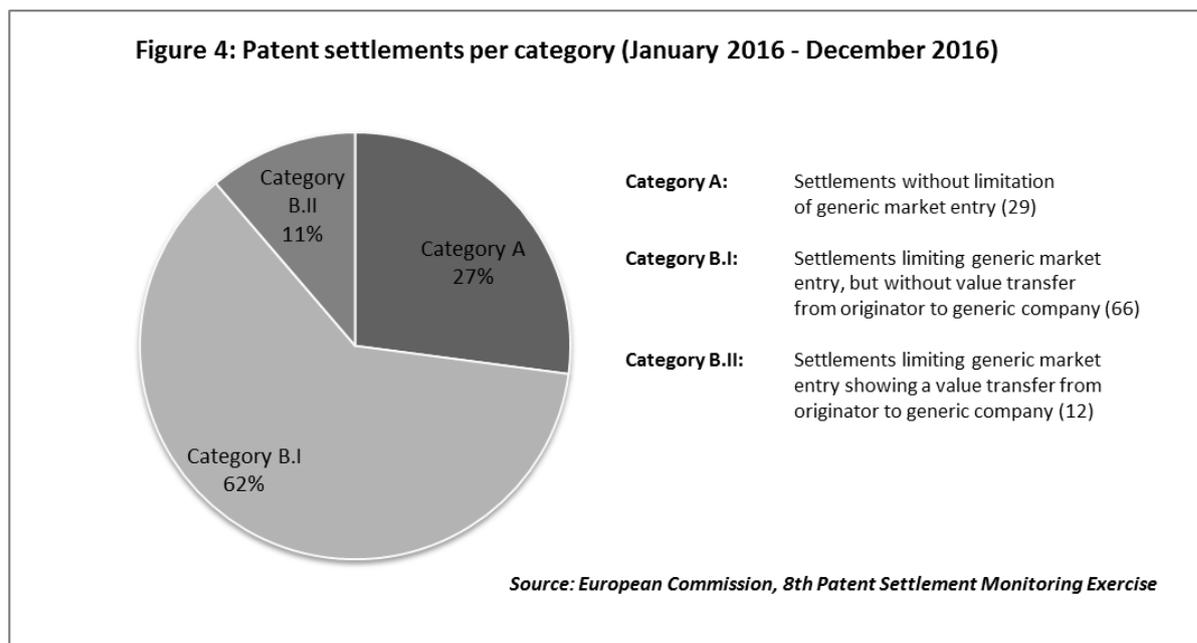

(26) Thirteen out of the 107 settlements concluded in 2016 covered at least half of the EU Member States. All these 13 settlements also covered at least one EFTA country. Moreover, 88 settlements covered a single Member State. Figure 3

shows the wide geographic coverage of settlements in the EU. Smaller and more recent Member States tend to be covered by fewer patent settlements than older and larger Member States, in correlation with the size of the respective pharmaceutical markets.

- (27) The large number of settlements in Portugal is likely explained by the implementation of Portuguese Law 62/2011 published on 12 December 2011.<sup>11</sup> In that regard, of the 55 settlements covering Portugal, 42 were related to this legislation. Nevertheless, it must be noted that it is difficult to estimate how many of these settlements would also have been concluded absent the new law.

### 3.2. Categories of patent settlements

- (28) The subsequent section describes in more detail the different types of patent settlement agreements concluded between generic and originator companies in the period concerned by this monitoring exercise.
- (29) The percentage of settlements according to the categories outlined above in section 2 is shown below in Figure 4.

- (30) Thus 27% (29 out of 107) of settlements did not limit generic market entry at all (category A), whereas 62% (66) limited generic market entry but did not show a value transfer from originator to generic company (category B.I) and only 11% (12) limited generic market entry showing a value transfer from the originator to the generic company. If one puts aside the settlements related to the Portuguese

<sup>11</sup> This law essentially provides that an originator must initiate arbitration proceedings within 30 days of the publication of a marketing authorisation application by a generic company. If they do not comply with this provision, the originators then lose the ability to assert their IP rights. Hence, originators in Portugal are, since 2012, obliged to systematically bring arbitration proceedings against all generics applying for marketing authorisations. Many of these proceedings, where there is no issue on the validity of the underlying rights, are settled very rapidly.

law mentioned above, category A amounts to 45% (29 of 65) of all settlements, category B.I to 40% (26) and category B.II to 15% (10). This compares as follows with figures in previous years:

*Table 2: Categories of patent settlements over the period 2000-2016 (in %)*

(%)		Category A (%)	Category B.I (%)	Category B.II (%)
2000 -2Q 2008		52	26	22
2Q 2008 - 2009		57	33	10
2010		61	36	3
2011		70	19	11
2012	All settlements	43	51	7
	Excluding PT-related	61	30	10
2013	All settlements	45	47	8
	Excluding PT-related	67	22	11
2014	All settlements	49	39	12
	Excluding PT-related	74	7	20
2015	All settlements	26	64	10
	Excluding PT-related	38	48	14
<b>2016</b>	<b>All settlements</b>	<b>27</b>	<b>62</b>	<b>11</b>
	<b>Excluding PT-related</b>	<b>45</b>	<b>40</b>	<b>15</b>

*Note: legislation was adopted in Portugal in 2011, which practically mandates arbitration proceedings between originators and marketing authorisation applicants. When the IPRs are not contested by the generic company, the proceedings are immediately settled. Hence, figures are provided which disregard settlements related to the Portuguese law. It must, however, also be noted that it is not known how many of these settlements would have still taken place absent this law. See footnote 11.*

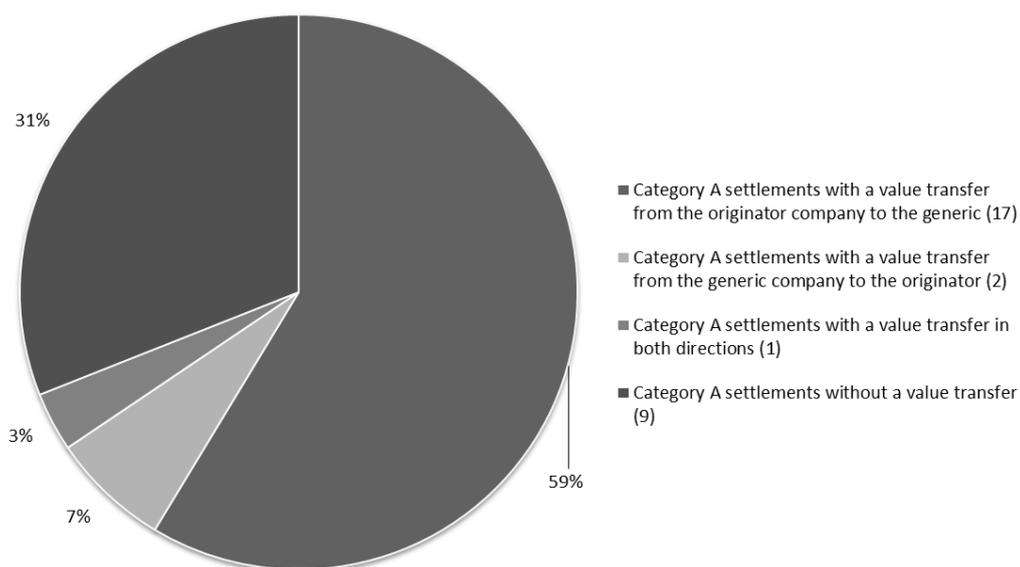

*Note: percentages may not add-up to exactly 100% due to the rounding-up of figures.*

**Source: European Commission, Pharmaceutical Sector Inquiry and eight Patent Settlement Monitoring Exercises**

### ***Category A settlements: settlements that do not limit generic entry***

- (31) As presented in Table 2 and Figure 4 above, 27% of all patent settlements (29 out of 107) did not limit the generic company's entry into the market (category A). The generic company was thus free to market its own generic product in the geographic market concerned, under the conditions chosen by the generic company itself.
- (32) Litigating parties may enter into category A settlement agreements for a variety of reasons. The terms of the settlement agreements took various forms, depending amongst others on whether or not the generic company had entered the market (at risk) or whether the settlement was concluded close to the time when the originator company lost exclusivity anyhow.
- (33) Figure 5 below distinguishes between different category A settlements according to the value transfer connected to them, if any.

**Figure 5: Category A settlements with or without value transfer (January 2016 - December 2016)**

Source: European Commission, 8th Patent Settlement Monitoring Exercise

- (34) This figure shows that 31% of the category A settlement agreements (9 out of 29) did not include any value transfer, but were concluded on a so-called "walk-away" basis, i.e. settlements where both parties agreed to simply discontinue their litigation without any further commitment/obligation on any of them. Such an agreement would appear to be the most likely outcome if both parties believe that continuing the litigation would be a waste of time and/or resources.
- (35) In addition, it appears that, while in 41% (12 of 29) of category A settlements the relevant patent(s) was not in force anymore at the time of signature, in the other 59% of cases the relevant patent(s) was still in force.
- (36) A value transfer from the originator company to the generic company took place in 59% of the category A settlements (17 out of 29). In most cases these were payments covering litigation costs and/or damages. The latter could happen, for example, when an originator company had originally obtained an interim injunction against a generic company's product, but later feared to lose the main case. Under such circumstances, the generic company could claim damages for the lost sales it incurred whilst it was prevented from marketing its product.
- (37) In 7% (2 out of 29) of the cases a value transfer from the generic company to the originator company took place. An example of such a settlement could be one where the generic company had entered the market at risk and during the course of litigation the patents concerned expired. In these cases, the litigation could have continued e.g. if the originator wanted to assert the infringement committed by the generic company up until the time the patent expired in order to recover damages from the generic for such an infringement. Faced with a high probability that the courts would find such an infringement if the case were to proceed, the generic company decided to settle by paying compensation to the

originator company, covering legal fees and possibly an additional amount in damages in order to avoid further litigation.

(38) For the sake of completeness it is worth pointing out that in 2 cases an originator had granted a royalty free licence to the generic to enter with its own product. As mentioned above, this was not counted as a restriction, as the generic company was free to enter the market without any restrictions e.g. as to the composition, quantities, pricing or other marketing conditions of the product.

(39) This compares as follows with figures in previous years:

*Table 3: Category A settlements over the period 2000-2016 (in %)*

(%)		Value transfer from originator company to generic	Value transfer from generic company to originator	No value transfer	Value transfer in both directions
2000 -2Q 2008		14	17	69	-
2Q 2008 - 2009		25	7	68	-
2010		13	11	76	-
2011		18	9	71	2
2012	All settlements	47	9	44	-
	Excluding PT-related	49	9	42	-
2013	All settlements	36	20	44	-
	Excluding PT-related	37	20	43	-
2014	All settlements	27	19	54	-
	Excluding PT-related	26	21	53	-
2015	All settlements	56	13	28	3
	Excluding PT-related	55	13	29	3
2016	<b>All settlements</b>	<b>59</b>	<b>7</b>	<b>31</b>	<b>3</b>
	<b>Excluding PT-related</b>	<b>59</b>	<b>7</b>	<b>31</b>	<b>3</b>

*Note: legislation was adopted in Portugal in 2011, which practically mandates arbitration proceedings between originators and marketing authorisation applicants. When the IPRs are not contested by the generic company, the proceedings are immediately settled. Hence, figures are provided which disregard settlements related to the Portuguese law. It must, however, also be noted that it is not known how many of these settlements would have still taken place absent this law. See footnote 11.*

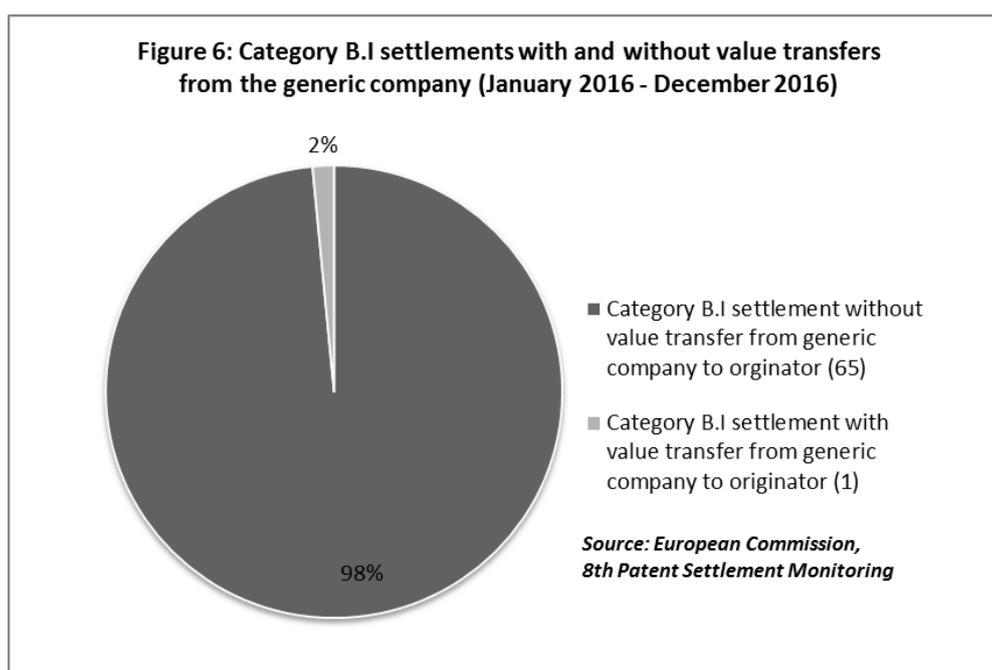

**Source: European Commission, Pharmaceutical Sector Inquiry and eight Patent Settlement Monitoring Exercises**

***Category B settlements: settlements that limit generic entry***

- (40) As already explained in section 2, settlements that limit generic entry can be divided into two subcategories, namely those that do not include a value transfer from the originator to the generic company (category B.I) and those that do (category B.II). Both of them will be looked at in turn.

***Category B.I settlements: Settlements limiting generic entry without value transfer from originator to generic company***

- (41) In the period investigated, B.I agreements accounted for 62% (66 out of 107) of all agreements (see Table 2 and Figure 4 above). Within the category B agreements, B.I settlements accounted for 85% (66 out of 78). The common features of the B.I settlements as analysed in this section are that they restricted generic entry but did not contain a value transfer from the originator to the generic company. Yet, one of those settlements showed a value transfer from the generic to the originator company. Thus, Figure 6 below breaks down the number of B.I settlements into those that contained a value transfer from the generic to the originator company and those that did not.

- (42) In these agreements the generic company agreed not to enter before the patent(s) at issue had expired (or was invalidated). The main characteristic of this category seems to be that the generic accepted the validity of the originator's patent or decided not to appeal an unfavourable first instance decision.
- (43) It must be noted that 61% (40 of 66) of B.I. settlements were signed in the context of the new legislation in Portugal, as explained in paragraph (27).
- (44) This compares as follows with figures in previous years:

Table 4: Category B.I settlements over the period 2000-2016 (in %)

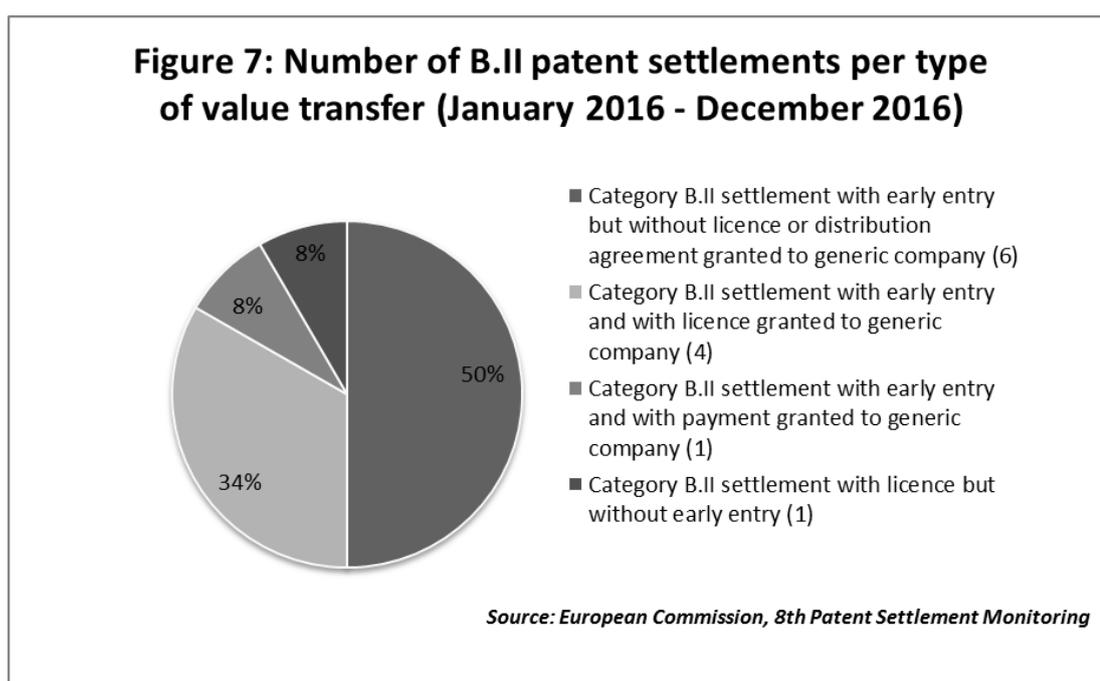

(%)		Value transfer from generic to originator company	No value transfer from generic to originator company
2Q 2008 - 2009		29	71
2010		16	84
2011		17	83
2012	All settlements	2	98
	Excluding PT-related	5	95
2013	All settlements	12	88
	Excluding PT-related	33	67
2014	All settlements	3	97
	Excluding PT-related	33	67
2015	All settlements	0	100
	Excluding PT-related	0	100
2016	<b>All settlements</b>	<b>2</b>	<b>98</b>
	<b>Excluding PT-related</b>	<b>4</b>	<b>96</b>

Note: legislation was adopted in Portugal in 2011, which practically mandates arbitration proceedings between originators and marketing authorisation applicants. When the IPRs are not contested by the generic company, the proceedings are immediately settled. Hence, figures are provided which disregard settlements related to the Portuguese law. It must, however, also be noted that it is not known how many of these settlements would have still taken place absent this law. See footnote 11.

Source: European Commission, eight Patent Settlement Monitoring Exercises

Category B.II settlements: settlements limiting generic entry with value transfer from originator to generic company

- (45) In the period investigated, B.II agreements accounted for 11% (12 out of 107) of all agreements (see Table 2 and Figure 4 above). Within the category B agreements, they accounted for 15% (12 out of 78). Figure 7 divides them according to the type of value transfer.

- (46) The value transfer flowing to generic companies in the settlement agreements took different forms, sometimes in various combinations: early entry<sup>12</sup> and a licence or payment. Of the 12 B.II agreements for the 2016 period, 6 (50%) foresaw early entry without a licence or a distribution agreement, 4 (34%) combined early entry with a licence to the generic company, 1 (8%) combined early entry with a payment to the generic company to compensate for legal costs, and 1 (8%) only included a licence.
- (47) It should be noted that this report merely summarises the results of the monitoring exercise, without implying any decision on further investigation of any of the settlement agreements reported under this or any other category. As mentioned above, if examined, an assessment of the particular facts of each individual case would have to be undertaken, e.g. whether a licence granted to the generic company may in fact have pro-competitive effects, depending on the restrictions and conditions within that licence.<sup>13</sup>

#### 4. Conclusion

- (48) The eighth monitoring exercise covers the period between 1 January 2016 and 31 December 2016, i.e. 12 months. It confirms that patent settlements continue to be used in the European pharmaceutical sector as shown by the number of patent settlements concluded, i.e. 107 patent settlement agreements in the EU. This compares with the lower annual average of 24 patent settlements in the period of the sector inquiry (from 1 January 2000 to 30 June 2008 - in total 207 settlements in eight and a half years).<sup>14</sup> Also, the number of INNs which were the subject of settlements increased significantly from less than 10 INNs in the first three years of the millennium to 46 in 2016. As with the former seven exercises, the results of the eighth monitoring exercise show that the Commission's announcement that it would continue scrutinizing B.II category settlements in the future has not hindered companies from settling their patent disputes.
- (49) The number of B.II settlements, i.e. settlements which restrict generic entry and show a value transfer from the originator to the generic company and which might attract competition law scrutiny, have stabilized at a low level. In the period covered by the sector inquiry (1 January 2000 to 30 June 2008), B.II settlements represented 22% of all settlements reported. This percentage has decreased over the years to reach 11% in 2016, see Table 2, above. Note that omitting agreements related to the

---

<sup>12</sup> A non-assert clause, whereby - even without a licence - the originator binds itself not to invoke the patent against the generic company, thereby allowing the generic medicine to come onto the market, may technically be perceived as constituting a value transfer. However, an agreement which includes no other limitative provision than determining the date of the generic entry with the originator's undertaking not to challenge such entry (a "pure early entry") is not likely to attract the highest degree of antitrust scrutiny.

<sup>13</sup> Hence, such investigations would also consider arguments raised by parties pointing to any potential pro-competitive effects of the settlements.

<sup>14</sup> With an average of 62 settlements per year in the period of the first monitoring exercise (mid 2008 - end 2009) and 89 settlements in the period of the second monitoring exercise (covering the year 2010).

new law in Portugal, this figure would be 15% (2 B.II agreements relating to the Portuguese Law).

- (50) The statements of certain stakeholders during the sector inquiry that the Commission would be forcing companies to litigate each patent dispute until the end have proved to be unfounded, given the strong increase in settlements after the sector inquiry. In addition, most of the settlements (89% in 2016) fall into categories that *prima facie* raise no need for competition law scrutiny. Companies, in most cases, are able to settle their disputes in a manner that is typically considered unproblematic from a competition law perspective.
- (51) In the future the Commission may decide to continue the monitoring exercise in order to examine further the development of the foregoing trends.
