

Public Consultation Future Strategy "EU2020"

On this subject we must say this:

To achieve a social market economy and sustainable economy smarter and greener, Europe should promote the priorities in the field of social cohesion and opportunities through exploiting the potential of education, research, acquisition of new skills, development of entrepreneurship and through a smooth transition between educational institutions and jobs, and even among different jobs will be crucial in a world that will provide more jobs in exchange for greater adaptability.

The Commission's objective is Europe to lead, compete and thrive thanks to a knowledge-based economy, connected, greener and more inclusive, with a rapid and sustainable growth and managing high levels of employment and social progress. Owing to this, that Europe has a strong industrial base and competitive, a modern service sector and agriculture, rural economy and a prosperous maritime sector. However, we believe that in relation to growth in knowledge should be reviewed in the courses of the universities that are mostly devoted to the theoretical component, and the courses to be adapted to allow an easier integration of students into the world of work through a practical training -- theory through real work experience.

should be given priority in educational policy, located in the multimedia production and the production and operation of networks for telecommunications. It should also be given special emphasis to entrepreneurship. In the sense that they should people be encouraged to adopt attitudes and behaviors conducive to the development of an innovative culture, technology and entrepreneurship through the development of instrumental skills for entrepreneurship, particularly by setting up laboratories of entrepreneurship. Through the promotion of start-ups and support commencement of operations by investing in modernization and innovation in traditional sectors, where in fact there are excellent examples of good practice, and on the other hand, invest in new sectors and activities where demand and international markets are more dynamic, including ICT, biotechnology, health technology, the new clean energy, nanotechnology, among others.

They should be created conditions to anticipate restructuring, in the context of globalization and new technologies, will absorb economic and in particular through a SME policy that encourages logical cluster of active management of retraining for new jobs, supplemented by active labor market policies appropriate and reducing administrative burdens.
