

/Context /Knowledge Economy//

/Our vision/

Strong and prosperous Europe

Importance of competency (all levels) instead of social position

Importance of new education on all level

/Suggested strategy/

Elaborate together with new forward thinking people, not institutions, the new rules including education, research and synergy with companies and territories, according to 3 laws of Knowledge Economics (<http://www.entovation.com/knowledge-economics.htm>),

and new measures of progress with systems, holistic and global thinking principles.

Impulse of "Green" and respectful attitudes.

Set a program (not programs) with these principles (not words) embedded.

/Some points /

1. to be inventive we not need necessary a huge amount of money, but different thinking
2. the right measures of innovation capacity and progress, not statistics ones, but based on knowledge economy principles, such as collective results, capacity of addressing and discovering the needs, capability of value generation from links...
3. more "forward thinkers" involved instead of reputable institutions
4. the research system has to be more needs-based, with ROI measures, including more efficient transformation of ideas and research projects into values. More businessman at the head of research centers
5. stronger collaboration between companies, including SME and research
6. More innovation in education, not only high but all levels, we need to grow a new generation of people, not only able to push the buttons and use the technology, but to invent the right technology in synergy with environment. More whole-brain thinking education
7. we need to study the natural instead to reinvent what exists in the nature
8. we have already in Europe a lot of results, competency, ideas, we need a common virtual space of knowledge (not data) to help us to find what is already done, to share experience and results, to find person who knows...
9. more ICT (intelligent and creative technology instead of

Information and Communication one)

I would be happy to bring more contribution at this discussion
We write less than we know and collectively we are much more inventive
than alone (1+1=11)

Kind Regards

Dr HDR Eunika Mercier-Laurent
