

#### Extra European workers

- I suggest to include in this section “Recognizing constraints and facing new challenges” p.3 line 31 (English text) one point concerning the European demography which should consider the increasing immigration of extra- European people (diplomats, laureates). Therefore, a program of allocation of these individuals in the employment should be organized in the “EU 2020” strategy. The strategy should be described on p.7 line 2.

#### -International Co-operation

- I suggest to develop the sentence on the promotion of international co-operation listed on p.4 line 40. The “EU 2020” strategy should take into consideration more developing scientific collaborations with the Eastern countries as China and India which represent 50% of the total population worldwide. Therefore, a strategic program with these Key partners should be designed and described on p.10 line 25.

Cordiali saluti
