

BUSINESS AND CONSUMER SURVEY RESULTS

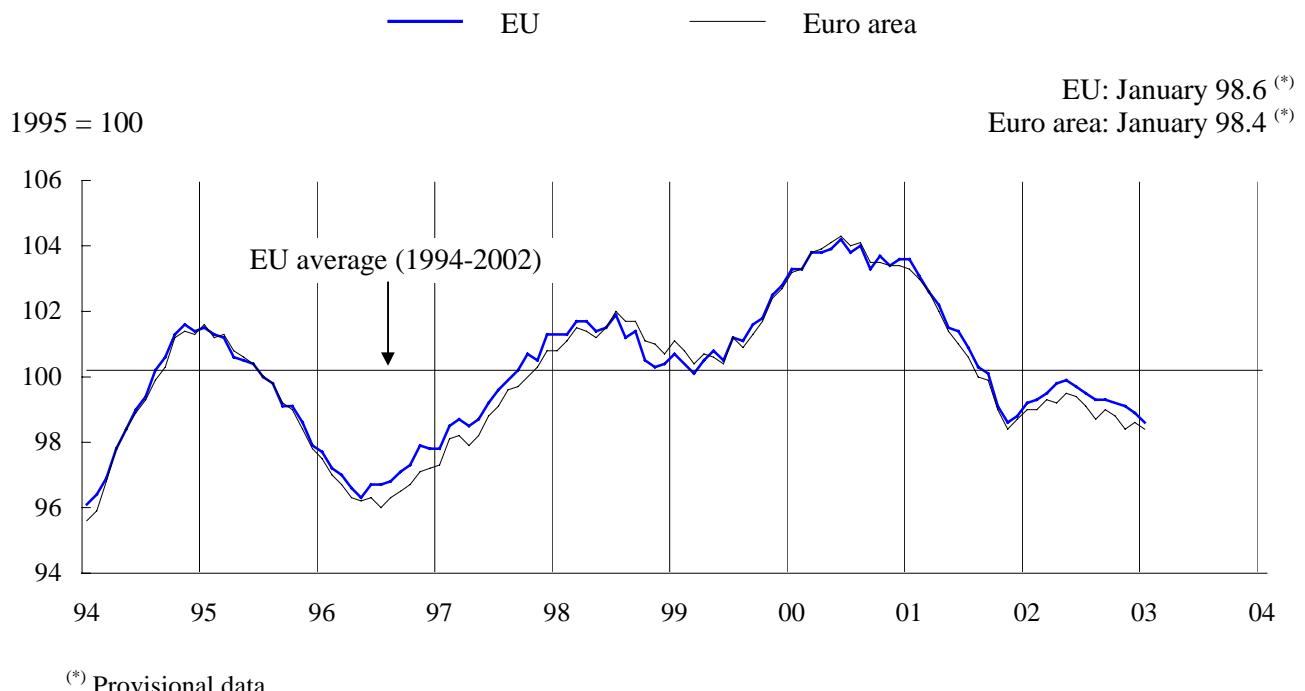

January 2003

Next publication of Business and Consumer Survey Results scheduled for 28 February 2003

http://europa.eu.int/comm/economy_finance/indicators/businessandconsumersurveys_en.htm

EMBARGO 12h00 CET

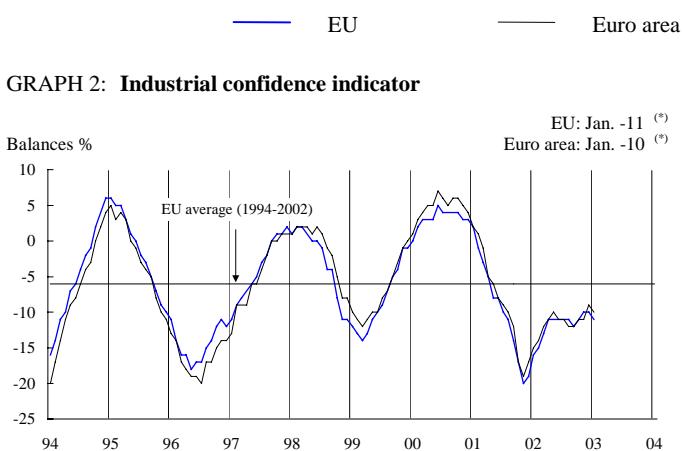

GRAPH 1: Economic sentiment indicator (s.a.)

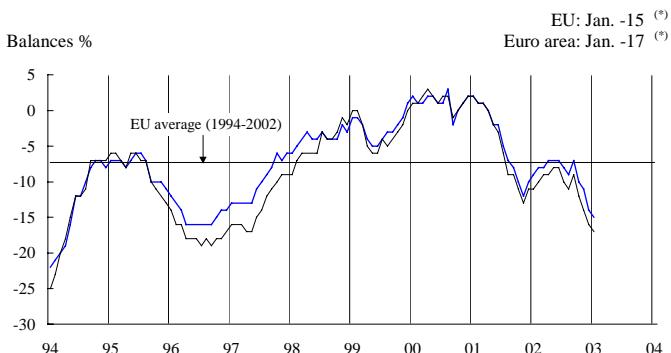

Economic sentiment decreased in both the euro area and the EU

The **economic sentiment indicator (ESI)** in the euro area recorded a slight decrease by 0.2 percentage points in January, reaching a value of 98.4. In the EU, the indicator continued its trend decline, falling by 0.3 percentage points to a value of 98.6. The economic sentiment indicator rose only in *Ireland* (0.1 percentage points) while it remained unchanged in *Denmark, Germany, Spain, Austria* and *Sweden*. The indicator fell significantly in *Portugal* (0.7), *France* and the *Netherlands* (0.5), *Greece* (0.4) and *Finland* (0.3); it decreased also in *Belgium, Italy* and the *United Kingdom*, although to a lesser extent (0.1).

GRAPHS 2-5: Economic sentiment indicator components (s.a.)

GRAPH 3: Consumer confidence indicator

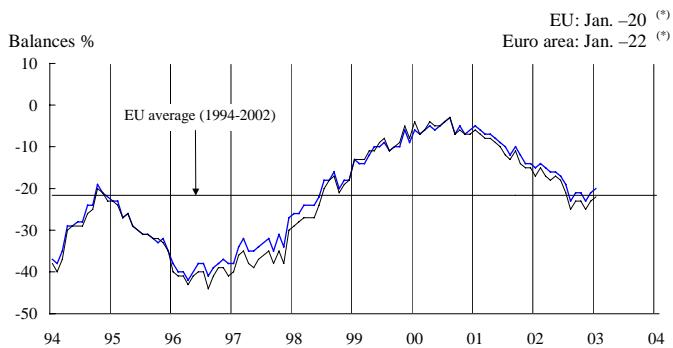

(*) Provisional data

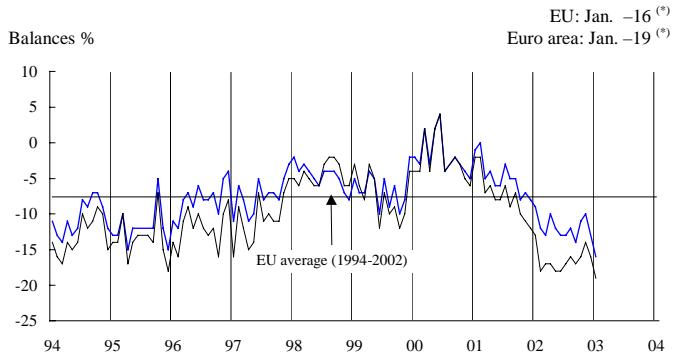

The deterioration affected almost all components of the ESI. In particular, the balance of the *industrial confidence indicator* declined by 1 point for both the euro area and the EU, after recording a moderate improvement in previous months. Moreover, the *consumer* and *retail trade confidence indicator* continued their downward movement of previous months. Only the *construction confidence indicator* moved in the opposite direction, but its improvement by 1 point could not offset the worsening in the other components.

The overall decline of the ***industrial confidence indicator*** was driven by decreases in *Finland* (9 points), *Ireland* (3), *Denmark*, *Greece*, *Portugal*, the *Netherlands* (2), and, to a lesser extent, in *Germany* and *Spain* (1). Industrial confidence increased in *Luxembourg* (7), *Sweden* (2), *Italy* and *Austria* (1), while it remained stable in *Belgium*, *France* and the *UK*.

Behind the deterioration of industrial confidence in both EU aggregates was a decrease in *production expectations* by 2 points. Moreover, in the EU stocks of finished products increased (1). This was,

GRAPH 5: Retail trade confidence indicator

however, compensated by an increase in *order books* (1).

Production expectations decreased in Finland (22 points), Greece, Ireland (8), Spain (3), the Netherlands (2) and to a lesser extent in Germany, France and Italy (1); they increased only in Luxembourg (8) and Sweden (2).

Order books were highly variable across Member States. They improved significantly in *Luxembourg* and *Sweden* (11 points), *Austria*, the *UK* (6), *Italy* (5) and only slightly in *Germany* (1). On the other hand, *order books* fell substantially in *Denmark*, *Finland* and the *Netherlands* (between 4 and 7 points), and more moderately in *Spain*, *France*, *Ireland* and *Portugal* (between 2 and 3 points).

Stocks of finished products increased markedly in Sweden and the UK, and to a lesser extent in Germany, Ireland and Italy. Production trends observed in recent months and selling price expectations remained stable in both the EU and the euro area. On a positive note, industrialist's employment expectations improved in a majority of Member States.

The **consumer confidence indicator** decreased by 1 point in both the EU and the euro area. Consumer confidence decreased in the *Netherlands* (7 points), *Austria* (5), *Belgium* and *Greece* (4), *France*, *Sweden* and the *UK* (3). It remained unchanged in *Spain* and *Ireland*. The indicator increased slightly in *Germany*, *Italy* and *Finland* (1), and somewhat more pronounced in *Denmark* (3).

A deterioration in the expected developments of the *general economic situation* and an expected increase in *unemployment* are behind the worsening of consumer confidence. However, *households' expectations about their savings over the next 12 months* improved in the euro area. Moreover, the balance of *households' expectations about their financial situation* over next 12 months remained unchanged.

Consumers' expectations about the general economic situation deteriorated in most Member States with the exception of *Denmark* and *Germany*, where they improved, and *Spain* and *Ireland*, where they remained stable.

Consumers' expectations concerning their *financial situation over the next 12 months* worsened in eight Member States, notably in *Greece*, *Austria* and *Sweden*, and, to a lesser extent, in *Belgium*, *Denmark*, *France*, the *Netherlands* and the *UK*. They improved slightly in *Germany*, *Spain* and *Ireland*, while they remained unchanged in *Italy* and *Finland*.

Unemployment expectations of consumers rose in a majority of Member States. A substantial increase occurred in *Belgium*, *Germany*, *Greece*, *France*, the *Netherlands* and *Austria*. *Unemployment expectations* decreased moderately in *Italy*, the *UK* and somewhat more in *Denmark*. Balances for *price trends over the next 12 months* increased slightly, implying an increase in inflationary expectations.

The **construction confidence indicator** increased by 1 point in both the EU and the euro area. The indicator improved marginally in *Belgium* and the *Netherlands*, and more significantly in *Germany*, *Greece*, *Spain*, *Ireland*, *Austria*, *Sweden* and the *UK*. It deteriorated in *France*, *Italy*, *Luxembourg* and *Portugal*, while it remained unchanged in *Denmark* and *Finland*. The developments in the construction sector were basically attributable to an improvement of *order books*. Moreover, the assessment of the current *activity trend compared with preceding months* and opinions about

employment expectations remained unchanged. Managers in the construction sector do not expect a decrease of *inflationary tensions* in the future.

The **retail trade confidence indicator** decreased in both the EU and the euro area by 3 points. The negative perception of both the *present* and *expected business situation* as well as the increase in *volume of stocks* is behind the worsening of retailers' confidence in a majority of Member States. These negative developments in the retail trade sector were more pronounced in *Germany*, *Greece*, *France*, *Italy*, *Portugal*, and *Sweden*. Moreover, *employment expectations* deteriorated also in both the EU and the euro area. Despite the negative perception of *present* and *expected business situation* in the euro area, the indicator concerning *intentions of placing orders* increased.

The **services confidence indicator** increased by 1 point in the EU and the euro area. The positive evolution of confidence among the managers in the services sector is mainly caused by the improvement of the *expected evolution of demand*. This positive tendency is also reflected by an increase in the *expected and recent evolution of employment* for both aggregates. However, the *assessment of the current economic climate* as well as opinions about the *evolution of demand in recent months* worsened in both the EU and the euro area.

The **industrial investment survey**, which was carried out during the fourth quarter of 2002, suggests that, at the end of 2002, across the EU most managers in the industrial sector do not expect big changes for their investments in 2003 compared with the volumes realised in 2002. In particular, real investment is expected to remain unchanged in both the EU and the euro area. Increases are expected in *Germany* (3%), the *UK* (3%) and the *Netherlands* (5%), but they are offset by decreases in *Italy* (12%), *Portugal* (10%), *Ireland* and *Sweden* (6%).

At a sectoral level, expectations vary significantly. Investment is expected to increase in the investment goods and motor vehicle industries. On the other hand, investment is foreseen to decrease in intermediate, consumer and non-durable consumer goods sectors. Extension and replacement are the two most relevant types of investment in the industrial sector. As to the factors influencing investment, technical improvements are the most dominant.

In the *future Member States* as a whole the *industrial, consumer and construction confidence indicators* increased. The *retail trade confidence indicator* remained unchanged. The confidence indicator in the industrial sector increased in *Bulgaria, Estonia, Poland and Romania*, while it decreased in the rest of the future Member States. Consumer confidence improved substantially in

Estonia, Lithuania and Poland and to a lesser extent in *Bulgaria, Romania and Slovakia*. The construction confidence indicator increased markedly in *Bulgaria, Estonia, Poland* and *Slovenia*, and to a lesser extent in *Latvia*. Finally, the retail trade confidence indicator increased considerably in *Cyprus, the Czech Republic, Poland, and Romania*.

Brussels, 31 January 2003.

* In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

The economic sentiment indicator (1995 = 100) is composed of the industrial confidence indicator (40%), the consumer confidence indicator (20%), the construction confidence indicator (20%), and the retail trade confidence indicator (20%). All confidence indicators are balances.

Source: unless stated otherwise: European Commission business and consumer surveys.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as minimum, lowest figure is considered as maximum.

(a) Data collected in January, April, July and October each year.

(b) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(c) Balances: i.e., differences between the percentages of respondents giving positive and negative replies.

(a) The sum of the replies for each Member State are weighted in the Community total with the value of consumers' expenditure.

(b) The indicator is the arithmetic average of the balances (%) of four questions: the financial situation of households, the general economic situation, unemployment expectations (with inverted sign) and savings, all over the next 12 months.

(c) This question was modified in the Danish consumer survey in January 2002, in order to bring it into line with the EU harmonised programme. The series prior to and after January 2002 cannot therefore be compared.

(n) Not seasonally adjusted.

TABLE 4: Survey of construction industry^(a)

Balances: i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)

(a) United Kingdom: refers to the volume of sales for the time of the year.

(b) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(c) Quarterly data, seasonally adjusted monthly.

TABLE 6: **Monthly survey of services** — Monthly questions ^(a)
 Balances: i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)

TABLE 6 (continued): **Monthly survey of services — Monthly questions^(a)**
Balances: i.e. differences between the percentages of respondents giving positive and negative replies (s.a.)

(a) Balances are the weighted averages of the percentages of answers describing each factor as 'very stimulating' (coefficient 1), 'stimulating' (0.5), 'limiting' (-0.5) and 'very limiting' (-1). The answers which do not mention any of these descriptions are not taken into account in calculating these percentages.

(b) The main technical factors are technological developments, the availability of labour and its attitude towards new technologies, and the technical conditions set by the public authorities before they grant the investment permit.
