

BUSINESS AND CONSUMER SURVEY RESULTS

Graph 1: Economic sentiment indicator (s.a.)

source: European Commission services

February 2014: Economic Sentiment broadly unchanged in the euro area and the EU

In February the *Economic Sentiment Indicator* (ESI) remained broadly unchanged, marking a marginal increase of 0.2 points¹ in both the euro area (to 101.2) and the EU (to 105.0).

Euro area developments

In the euro area, the ESI's marginal increase was due to enhanced confidence in construction and, to a lesser extent, services, retail trade and industry; at the same time, confidence among consumers worsened. Sentiment booked improvements in three out of the five largest euro area economies, i.e. Germany (+0.4), the Netherlands (+0.6) and, especially, Italy (+2.4), while it remained stable in Spain and deteriorated in France (-1.4).

Industry confidence registered a small improvement (+0.4), backed by managers' slightly more optimistic assessment of the *stocks of finished products* and the current level of *overall order books*; their *production expectations* were virtually unchanged. Managers' assessments of the *past production* and the current level of *export order books*, which are not included in the confidence indicator, marked an improvement. The increase in **services confidence** (+0.8) resulted from managers' more positive assessment of *past demand* and the *past business situation*, while their appraisal of *expected demand* remained broadly stable. **Consumer confidence** deteriorated (-1.0) as a result of worsened expectations about *savings, unemployment* and the *future general economic situation*. Consumers' views on the *future financial situation* of their households remained broadly flat. **Retail trade confidence** booked a moderate improvement (+0.5) driven by managers' more positive evaluation of the *present business situation*, partially offset by less positive *business expectations*; managers' appraisal of the *volume of stocks* remained broadly unchanged. Confidence in the **construction sector** went up (+1.3), resulting from managers' markedly improved assessment of *order books* coupled with a downward revision of *employment expectations*. **Financial services confidence** (not included in the ESI) decreased by 2.5 points. While the assessment of the *past business situation* and *past demand* worsened, *demand expectations* were assessed more positively.

While **employment plans** were revised upwards in services, they remained virtually unchanged in industry and worsened in retail trade and construction. **Selling price expectations** rose in services and construction but decreased in retail trade and industry. Also consumers' price expectations were revised downward.

EU developments

As in the euro area, the headline indicator for the wider EU was broadly unchanged (+0.2). Concerning the two largest non-euro area EU economies, the ESI improved in the UK (+1.0) and remained broadly stable in Poland (+0.3). On a sector basis, services and retail trade marked positive developments while confidence among consumers decreased slightly, consistent with euro area developments. By contrast, confidence in industry and construction booked only marginal changes: these differences can be ascribed to virtually flat industry confidence in both Poland and the UK and a marked decrease in construction confidence in the UK.

EU-wide employment plans were more negative than in the euro area in industry; on the other hand, they remained unchanged in retail trade. As for price expectations, the main differences to the euro area were mild downward revisions in retail trade and among consumers.

¹ Note: January's industry, services and construction confidence indexes for France were revised upward compared to the figures published in the January press release. This correction implied an increase of a decimal point for both the EU and the euro area ESI (from 104.7 to 104.8 and from 100.9 to 101, respectively).

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2012) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2014.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by the Directorate-General Financial and Economic Affairs (DG ECFIN), Unit Economic situation, forecasts, business and consumer surveys (A4), Sector Business and consumer surveys and short-term forecast.

To obtain additional information regarding these survey results you can contact the European Commission at the following addresses:

Mail: European Commission
DG ECFIN / Unit A4
200, Rue de La Loi
B-1049 Brussels

Email: ECFIN-BCS-MAIL@ec.europa.eu
