October 2014: Economic Sentiment picks up in both the euro area and the EU

In October, after four months of stagnation or decline, the *Economic Sentiment Indicator* (ESI) picked up in both the euro area (by 0.8 points to 100.7) and the EU (by 0.5 points to 104.0).¹ The euro-area indicator thereby went back to just above its long-term average of 100.

Euro area developments

The stabilisation of euro-area sentiment resulted from an improvement in confidence in all the business sectors. While rises were important in retail trade, services and, particularly, construction, industry booked only a small increase, and confidence among consumers remained broadly stable. Amongst the largest euro-area economies, the ESI decreased only in Spain (-0.7), while it rose in Germany (+0.6), France (+1.1), Italy (+0.5) and the Netherlands (+2.1).

Increasing **industry confidence** (+0.4) resulted from managers' more optimistic views on *expected production* and the *current level of overall order books*, while their assessment of *stocks of finished products* remained broadly stable. Of the questions not included in the confidence indicator, the assessment of *past production* remained stable, while views on *export order books* improved. The marked improvement in **services confidence** (+1.2) was driven by managers' significantly brighter views on *past demand*, *demand expectations*, and, to a lesser degree, the *past business situation*. **Consumer confidence** remained broadly stable (+0.3) resulting from more positive assessments of the *future general economic situation* and *future unemployment*, while consumers' expectations of their *financial situation* and *future savings* remained broadly unchanged. The positive development in **retail trade confidence** (+0.9) reflected more positive views on the *expected business situation* and on the adequacy of the *volume of stocks*, while managers' assessment of the *present business situation* remained broadly unchanged. The marked rise in **construction confidence** (+3.1) was fuelled by upward revisions in both managers' *employment expectations* and their assessment of the level of *order books*. By contrast, the important deterioration (-4.3) in **financial services confidence** (not included in the ESI) was due to less positive appraisals of all three components (*past business situation*, *past demand* and *demand expectations*).

Employment plans saw a significant upward revision in construction and a smaller increase in services, while employment plans remained broadly unchanged in retail trade and worsened in the industry sector. **Selling price expectations** increased in industry and services, while they remained broadly stable in construction and decreased only in the retail trade sector. Also consumer price expectations picked up in October.

EU developments

The slighter increase of the headline indicator for the EU (+0.5) was mainly due to the deterioration in the largest non-euro area EU economy, the UK (-2.1). However, the ESI increased markedly in Poland (+2.9). While industry, services and construction confidence improved in line with the euro area, EU retail trade confidence dropped. By contrast, EU consumer confidence increased, defying the broadly flat euro-area development. Finally, confidence in financial services fell in line with the euro area.

Employment expectations differed from the euro-area results only in the retail trade sector, with EU managers reporting a downward revision. Also price expectations were in line with those for the euro area except for the

¹ The business confidence indices for France were slightly revised compared to the September press release, causing a downward revision of a decimal point for the EU ESI (to 103.5).

retail trade sector, where managers expected prices to increase, and consumers that expected broadly stable price developments.

Quarterly survey results (conducted in October)

In the euro area manufacturing sector, the estimated rate of *capacity utilisation* remained broadly stable at 80.0% (0.1 point higher than in July). At the same time, the share of managers assessing their *current production capacity* as 'more than sufficient' (in view of current order books and demand expectations) increased slightly and managers' *export volume expectations* were marginally revised downwards. However, managers' assessment of their *competitive position on foreign markets outside the EU over the past three months* improved compared with the previous survey carried out in July (by 1.1 points). Even if managers' appraisal of *new orders* worsened slightly (-0.6 points), the estimated *number of months' production assured by orders on hand* edged up by 0.2 months. Developments in the wider EU were broadly in line, with the rate of capacity utilisation remaining unchanged at 80.2.

In both the EU and the euro area, capacity utilisation in services² has been on an upward trend since the beginning of 2013 (see Graph 11). In October 2014, the indicator increased in both the euro area (by 0.5 points to 87.8%) and the EU (by 0.7 points to 88.4%).

² A new question on capacity utilisation was introduced into the services survey in July 2011. Seasonally adjusted results were first published in July 2014. Background information and a preliminary analysis of the seasonally unadjusted results until October 2013 are available at http://ec.europa.eu/economy_finance/db_indicators/surveys/method_guides/index_en.htm

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2012) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2014.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2a: Quarterly survey of manufacturing industry (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by the Directorate-General Financial and Economic Affairs (DG ECFIN), Unit Economic situation, forecasts, business and consumer surveys (A4), Sector Business and consumer surveys and short-term forecast.
