

BUSINESS AND CONSUMER SURVEY RESULTS

Graph 1: Economic sentiment indicator (s.a.)

source: European Commission services

January 2015: Economic Sentiment increases slightly in both the euro area and the EU

In January, the *Economic Sentiment Indicator* (ESI) increased slightly in both the euro area (by 0.6 points to 101.2) and the EU (by 0.5 points to 104.6).¹

Euro area developments

The improvement of euro-area sentiment resulted from marked increases in consumer and retail trade confidence, only partly offset by declines in confidence in the services and construction sectors. Confidence in industry remained broadly stable. Amongst the largest euro-area economies, the ESI rose in Germany (+0.4), Spain (+1.0) and Italy (+2.6), while it declined in France (-0.4) and the Netherlands (-1.2).

Industry confidence remained broadly stable (+0.2) resulting from managers' more optimistic views on *expected production* being counterbalanced by marginally worse assessments of the *current level of overall order books* and of *stocks of finished products*. Of the questions not included in the confidence indicator, the assessment of *past production* improved, while views on *export order books* worsened. The decrease in **services confidence** (-0.8) was due to managers' less optimistic views on *demand expectations*, and, to a lesser degree, *past demand*, while their assessment of the *past business situation* remained stable. The marked rise in **consumer confidence** (+2.4) was fuelled by upward revisions of all the four components of the indicator. Consumers' assessments of the *future general economic situation* and *future unemployment* improved strongly, while the rise in consumers' expectations about their *financial situation* and *future savings* was less pronounced. The positive development in **retail trade confidence** (+1.6) reflected a marked increase in managers' assessment of the *present business situation*. Also managers' views on the *expected business situation* and - to a lesser extent - the adequacy of the *volume of stocks* were more positive. The deterioration in **construction confidence** (-1.3) was due to downward revisions in both managers' *employment expectations* and their assessment of the level of *order books*. Finally, the deterioration (-2.7) in **financial services confidence** (not included in the ESI) was due to less optimistic appraisals of the *past business situation* and *past demand*, while *demand expectations* improved.

Employment plans saw an upward revision in services and industry, while worsening in the retail trade and construction sectors. **Selling price expectations** decreased markedly in services and, to a lesser degree, in construction and industry, while remaining broadly stable in the retail trade sector. Consumer price expectations plummeted in January.

EU developments

The headline indicator improved slightly in the EU (+0.5) and the largest non-euro area economy, the UK (+0.6), but decreased in Poland (-0.9). While confidence in industry, retail trade, construction and among consumers followed the same patterns as in the euro area, EU services confidence remained virtually unchanged. Finally, confidence in financial services declined in line with the euro area.

Also employment and price expectations largely mirrored the euro-area results, except for the retail trade sector where EU managers expected prices to decrease, and for industry where the decrease in price expectations was far more important in the EU than in the euro area.

¹ Due to the annual updating of country weights and the inclusion of 2014 in the standardisation sample (1990-2014), data have been revised for previous periods. Moreover, following Lithuania's adoption of the euro on 1 January 2015, it is included in the euro area aggregate. Historical values and country weights have been revised accordingly.

Quarterly survey results (conducted in January)

In the euro-area manufacturing sector, the estimated rate of *capacity utilisation* increased to 80.7% (0.7 points higher than in October). Accordingly, the share of managers assessing their *current production capacity* as 'more than sufficient' (in view of current order books and demand expectations) declined. Though managers' *export volume expectations* were revised downwards, their assessment of the *competitive position on foreign markets outside the EU over the past three months* improved compared with the previous survey carried out in October (by 0.7 points). Finally, managers' appraisal of *new orders* remained broadly unchanged (+0.1 points), while the estimated *number of months' production assured by orders on hand* fell fractionally by 0.1 months. Developments in the wider EU were broadly in line, with the rate of capacity utilisation increasing by 0.6 points to 80.8%.

In both the EU and the euro area, the upward trend in capacity utilisation in services that was visible since the beginning of 2013 came to a halt (see Graph 11). In January 2015, the indicator decreased by 0.3 points in both the euro area and the EU and now stands at 87.5% and 88.2%, respectively.

In the tables: (s.a.) = seasonally adjusted, (n) = not seasonally adjusted, : = not available.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

The economic sentiment indicator is composed of the industrial confidence indicator (40%), the service confidence indicator (30%), the consumer confidence indicator (20%), the construction confidence indicator (5%), and the retail trade confidence indicator (5%). Its long term average (1990-2012) equals 100. The reported ESI average is based on this standardisation sample. All confidence indicators are balances.

The country weights have been updated in January 2015.

(1) Lithuania joined the euro area on 1 January 2015 and is included in the EA aggregates. Historical values and country weights have been revised accordingly.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) The indicator is the arithmetic average of the balances (%) of the questions on production expectations, order-books and stocks (the last with inverted sign).

(b) Highest figure is considered as a minimum, lowest figure is considered as a maximum.

TABLE 2a: Quarterly survey of manufacturing industry (s.a.)

(Data collected in January, April, July and October each year.)

Capacity utilisation in manufacturing industry (%)

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 1990.

(a) Answers to the questions whether, taking into account the level of order-books or production, capacity is more than sufficient (+), sufficient (=) or less than sufficient (-). Thus, negative balances (capacity less than sufficient) indicate high levels of capacity utilisation, whereas positive balances (capacity more than sufficient) are associated with low levels of capacity utilisation.

(b) Balances: i.e. differences between the percentages of respondents giving positive and negative replies.

(a) The indicator is the arithmetic average of the balances (%) for the questions on business situation and recent and expected evolution of demand.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

TABLE 3a: Quarterly survey of services (s.a.)^(a)

(Data collected in January, April, July and October each year.)

Capacity utilisation in services (%)

(a) The indicator is the arithmetic average of the balances (%) for the present and the future business situation, and for stocks – with inverted sign.

(b) United Kingdom: refers to the volume of sales for the time of the year.

(*) Minimum, maximum and averages are calculated over the period of availability which is not necessarily as from 01/1990.

(a) Data are not seasonally adjusted.

(b) The confidence indicator is the arithmetic average of the balances (%) for the questions on business situation and past and expected evolution of demand.

(c) Component of the confidence indicator.

Information

The Directorate-General Financial and Economic Affairs (DG ECFIN) of the European Commission publishes the Business and Consumer Survey Results every month. The issues of January, April, July and October also include the quarterly survey results for the manufacturing industry and consumers. The April and November issues also include the investment survey results.

The data of the surveys is processed by DG ECFIN's Unit Economic situation, forecasts, business and consumer surveys (A4), Sector Business and consumer surveys and short-term forecast.
