

Gas interconnection

Baltic – Denmark

MEMBER STATE(S) INVOLVED

Denmark

PROJECT PROMOTER

Energinet.dk
<http://www.energinet.dk>

BASIC TECHNICAL DATA

Length: 94 km
Capacity: 5.5 bcm/y

BUDGET

Total project cost:
€ 200 m of which:
Promoter(s): € 100 m
EEPR support: € 100 m
(funding rate of 50%)

EEPR ACTIVITIES¹ TIMETABLE

Start date: July 2009
End date: October 2014

OBJECTIVES

The project aims to strengthen Denmark's gas transmission system. It involves the construction and commissioning of a compressor station in South Jutland, and the construction of a gas pipeline that extends from Ellund, on the Danish/German border, to Egtved. The project also includes pre-engineering studies for a possible offshore gas pipeline between Denmark and Poland (Baltic Pipe).

PROJECT IMPACT

The aim of the project is to maintain and increase gas supply to Denmark, Sweden and the Baltic region, following the decline of gas production in the Danish gas fields. It could also help to increase the security of the gas supply in Central Europe, by supplying consumers with Norwegian Gas.

The new infrastructure will enable better market integration, by expanding the gas transmission capacity from the entry point at Ellund, on the Danish/German border. This will also provide an operational link between the German network and the Danish transmission system.

ACTIVITIES (CO-FINANCED UNDER THE EEPR) IN BRIEF

The EEPR is supporting the procurement of material including pipes, valves and any other equipment necessary for the construction of the project in Denmark.

STATE OF THE PLAY: COMPLETED

The project has been completed. The pipeline and the compressor station started their operation on 1 October 2013.

The new infrastructure has been operational since October 2013.
