

Isvánné Kertész

Kertész Vill Bt

Sector

Work safety

Region

Dunaújváros, Hungary

Nomination as an Ambassador

In the 1980s, I worked for Hungary's largest metallurgical plant as a maintenance technologist. I came into contact with work safety in 1987, in a way that the well-marked distinction from my male engineer colleagues and leaders was unacceptable to me. I wanted to change this. I selected from the fields related to my original education, and I decided to train myself to a professional work safety specialist.

To achieve the goals I changed jobs and started to study work safety engineering in Budapest.

I developed my skills over many years. I became acquainted with work safety responsibilities relating to both employers and employees.

In order to provide work safety related legal matters on higher level I continued my studies in the Faculty of Law Engineering of the Eötvös Lóránd University.

After external companies contacted me, I decided to establish a family company, the KERTÉSZ VILL Bt.

In 2003 time came to give up my full-time job and we expanded the scope of our partners. The company developed its activities, and we also included the fire protection service. Later we expanded our range of activities with electrical standard inspections and controls.

I took the decision at the age of fifty to control my own

	destiny and to get benefit from my professional knowledge for myself and my family. This change required to create a viable business in the industry, which operates effectively in the long run.
About the company	Our company was established in 1999. We offer work safety and fire protection advisory services. We expanded our range of activities with electrical standard inspections and controls as well.
Year of business launch	1999
