5. Technical criteria

BASIC CONDITIONS FOR APPLICATION OF THE EU ECO-LABEL TO THE CAMPSITE SERVICE. GENERAL LEGAL REQUIREMENTS.

Criteria: applicability and scoring

Third party management of extra facilities and/or activities

Verification documents and on-site inspections

General legal requirements

SECTION A– Mandatory Criteria

ENERGY

1. Electricity from renewable sources
2. Coal and heavy oils
3. Efficiency and heat generation
4. Air conditioning
5. Energy efficiency of buildings
6. Window insulation
7. Switching off heating or air conditioning
8. Switching off lights
9. Energy efficient light bulbs
10. Outside heating appliances

WATER

11. Water flow from taps and showers
12. Waste bins in toilets
13. Urinal flushing
14. Changing towels and sheets
15. Correct waste water disposal

DETERGENTS AND DISINFECTANTS

16. Chemical toilet disposal point (CDP)
17. Disinfectants

WASTE

18. Waste separation by guests

- [19. Waste separation](#)
- [20. Disposable products](#)
- [21. Breakfast Packaging](#)

OTHER SERVICES

- [22. No smoking in common areas](#)
- [23. Public transportation](#)

GENERAL MANAGEMENT

- [24. Maintenance and servicing of boilers and air conditioning systems](#)
- [25. Policy setting and environmental program](#)
- [26. Staff training](#)
- [27. Information to guests](#)
- [28. Energy and water consumption data](#)
- [29. Other data collection](#)
- [30. Information appearing on the Eco-label](#)

SECTION B– Optional criteria

ENERGY -B

- [31. Generation of electricity through renewable energy sources](#)
- [32. Energy from renewable energy sources](#)
- [33. Boiler energy efficiency](#)
- [34. Boiler NOx emissions](#)
- [35. District heating](#)
- [36. Combined heat and power - cogeneration](#)

Other important documents

Foreword

This user manual is designed to assist the applicant during the process of application. Two

main documents are intended to help the applicant in the application submission: the present User Manual and the Verification Forms, which contain suggestions for models of the different assessment and verification documents to be provided .

Part I, the User Manual provides a step-by-step guidance on how the scheme operates and how to apply and an introduction to the single criteria and their context in a nontechnical language with a glossary and useful links for further information;

Part II, the Digital Verification Forms supply an application form for the specific product group campsite service for which you are requesting certification with the fields related to each criterion to be filled in by the applicant electronically.

This is Part I - we suggest that you read it before completing the digital application form in Part II. If you have any queries or suggestions, please call your Competent Body on [*insert telephone enquiry point*]

User manuals are revised when criteria are updated (normally every three to five years), and occasionally for other reasons. Therefore when you decide to submit an application please check with your Competent Body that you are using the most up to-date pack.

[Return to Index](#)

1. Introduction to the eco-label for campsite service

The Community eco-label, or otherwise said European Union Eco-label (referred to as the EU ecolabel in this pack) is Europe's official environmental label. 'The Flower', as it is also called, was established in 1992 by an EU Regulation. It aims to help consumers to easily identify products which are less damaging to the environment than equivalent brands over their whole life cycle.

In 2000 the EU eco-label was re-launched by a revised Regulation No 1980/2000/EC which extended the scheme to cover services. Campsite service is a sub group of the first product group which has been developed for a service, tourist accommodation. In this application pack, with the term product, the campsite service shall be intended.

In 2010 new rules strengthening the EU Ecolabel, entered into force following the publication of the Regulation (EC) N°66/2010, of 25 November 2009. Important changes include even higher environmental standards, lower fees and simplified criteria linked to public purchasing and other EU policies. The new rules include the possibility for Ecolabel criteria to be developed for food and drink products in the future. There will also be greater synergy with other national environmental labels as well as faster criteria development and revision

procedures.

Participation in the scheme is voluntary. It is administered by officially appointed Competent Bodies in each EU country.

Businesses whose products comply with the published product group definition and the criteria about the product and its production can apply for the EU eco-label. The technical criteria for specific product groups are agreed upon by EU Member States after consultation with relevant interests, including other departments within the European Commission and European representatives of industry, consumers, environmental organisations, retailers and public authorities.

There are currently eco-label criteria for 26 product groups (more information here: http://ec.europa.eu/environment/ecolabel/ecolabelled_products/product_categories_en.htm)

The EU eco-label for the campsite service has been approved in September 2004 and its criteria have undergone revision in 2008, the new version is available here: http://ec.europa.eu/environment/ecolabel/ecolabelled_products/categories/camp_site_service_en.htm

All the criteria are published on the European Commission's official eco-labelling website reported above. The website contains all the other EU eco-label documents and shows in detail how criteria are developed and how the scheme operates.

All key documents are available in many or all Community languages and you may easily download the texts.

This manual explains the application process in detail. These are the main points:

- **Eligible products**

To be eligible for the EU eco-label, a campsite must provide a *campsite service* which complies with the product group definition and with the published technical criteria (see Part II, Verification Forms). The service offered may vary within a range of services in addition to the campsite service, and may vary or be modified within the period of the EU eco-label award, but must remain in compliance with the criteria at all times. A new application is not required for modifications which do not affect compliance with the criteria (for example the addition of another service, such as special activities for children or pet care or the addition of a swimming pool etc), but the Competent Body must be told in writing about significant modifications (for example the addition of the swimming pool may require compliance to additional criteria because of the score requirements of Section B criteria).

- **Who can apply**

An owner of a campsite, or an executive manager, can apply for the EU eco-label to the Competent Body in the EU Member State where the campsite service is offered.

- **Which Competent Body to apply to**

Applications should be made to the Competent Body in the Member State where the campsite service is offered. If the service is offered in the same form in several EU Member States, the applicant can choose a Competent Body in one of those states, and that Competent Body will consult those other Member States. For a campsite brand belonging to a State outside the EU, the application must be made in the European country where the service is (or is to be) offered.

- **Before submitting an application**

The applicant obtains an application form from an appropriate Competent Body (see above), and makes sure that the campsite service complies with the eco-labelling criteria either independently or with the help of a consultant. The costs to comply and prove compliance are met by the applicant. The applicant compiles the digital application and attaches the relevant documents and certification to show compliance, and submits this with the application form. The procedure for assessing the validity of the application is explained in greater detail further on in this document.

- **On receipt of the application**

The Competent Body invoices the applicant for the application fee when the application is received. This fee shall be no lower than EUR 200 and no higher than EUR 1 200.

In the case of small and medium enterprises (as defined by Commission Recommendation 2003/361/EC of 6 May 2003) and operators in developing countries, the maximum application fee shall be no higher than EUR 600. In the case of micro-enterprises the maximum application fee shall be EUR 350.

The application fee shall be reduced by 20 % for applicants registered under the Community eco-management and audit scheme (EMAS) and/or certified under the standard ISO 14001. This reduction is subject to the condition that the applicant explicitly commits, in its environmental policy, to ensure full compliance of its ecolabelled products with the EU Ecolabel criteria throughout the period of validity of the contract and that this commitment is appropriately incorporated into the detailed environmental objectives. ISO 14001 certified applicants shall demonstrate annually the implementation of this commitment. EMAS registered applicants shall forward a copy of their annually verified environmental statement.

The Competent Body checks that the product complies with the criteria, and that the application complies with the assessment and certification procedures.

Where the eco-labelling criteria require service facilities to meet certain requirements, these must be met on all grounds where the facilities are present, provided they be under the management of the product owner or manager (instead of third parties licensing the service).

• **If the application is successful**

The Competent Body awards a licence to use the EU eco-label under the terms of the standard contract. The requirements for obtaining the EU eco-label are the same in each Member State, so once the EU eco-label has been awarded by one Competent Body, it is valid throughout Europe and the product can then be marketed with the EU eco-label throughout the Community, and the EU eco-label can be used on the product and in advertising it. The Competent Body then may invoice the applicant for the annual licence fee.

For the annual licence fee, the competent body may require each applicant who has been awarded an EU Ecolabel to pay an annual fee of up to EUR 1 500 for the use of the label.

In the case of small and medium enterprises and operators in developing countries, the maximum annual fee shall be no higher than EUR 750.

In the case of micro-enterprises the maximum annual fee shall be EUR 350.

The period covered by the annual fee will begin with the date of the award of the EU Ecolabel to the applicant.

The award normally lasts until the criteria expire and are revised, at which stage there is a simplified procedure for renewal under the revised criteria.

[Return to Index](#)

2. The application process

The applicant has to fill in the electronic application forms provided together with this manual. The forms are in the "open office" format, the free program suite can be downloaded [here](#). All relevant fields have to be compiled with the requested information, and the [relevant declarations](#) indicated in the field "Documents to be attached" have to be filled in, either

signed digitally or printed out, signed and scanned, and sent in together with the application form.

This manual gives further information regarding to the single criteria, their context and the required documentation. It contains also detailed indications where in the electronic application form each criterion has to be filled in.

In some cases, where shown, a producer's declaration is sufficient, but in others independent confirmation is required.

The Competent Body will invoice applicants for a non returnable application fee on receipt of the application. If the application is successful, the Competent Body will invoice the licensee for an annual fee. It will apply all relevant reductions.

To enable the Competent Body to verify the correct implementation of the EU eco-label, the documentation should include an illustration of the proposed use of the EU eco-label within the campsite or elsewhere.

2.1 Assessing compliance with criteria

Before submitting the application to the Competent Body, the applicant must have the campsite service assessed for compliance with the [technical criteria](#) for the product group. The [verification documents](#) are self-declarations, declarations and other relevant documentation from providers of goods and services, including manufacturers, and local authorities, relating to the goods, services and other activities present in the campsite of the applicant and which are covered by the criteria.

Procedure for assessing the application

After receiving an application the Competent Body will examine the dossier including the documentation sent directly from the suppliers. The Competent Body has the possibility to ask for further information, if necessary.

The case officer at the Competent Body assessing the application makes a list of missing documentation, which is communicated to the applicant. The applicant makes sure that the listed requirements are met and provides the Competent Body the missing documentation. In most cases it may be necessary to send more than one list of missing documentation.

When all documentation has been assessed and approved, the Competent Body shall carry out an onsite visit to the applicant.

When all requirements have been met, the Competent Body notifies the application in the European Commission who registers the contract and the Competent Body will sign the contract with the applicant.

Certified self-assessment

Applicants shall provide written information on the compliance to the criteria, as requested by each criterion (see Part II). Documents should be recent. **Competent Bodies may make further checks on data submitted, and on this basis the Competent Body will not accept declarations which are more than six months old at the date of the application.**

In the product group campsite service no laboratory tests are required, but declarations from manufacturers and other qualified professionals who are responsible for the features and maintenance of the equipment tackled by the criteria in this award scheme.

Costs of assessment and certification

The costs of requests of all documentation for verification must be met by the applicant, and are in addition to the application and annual fees mentioned above, so applicants are advised to plan the verification procedures and costs with the staff and/or managers who shall be responsible for them before applying.

Assessment

Where appropriate, test methods and standards other than those indicated for each criterion may be used if their equivalence is accepted by the Competent Body assessing the application.

Where the applicant is required to provide declarations, documentation, analyses, test reports, or other evidence to show compliance with the criteria, it is understood that these may originate from the applicant and/or his supplier(s) and/or their supplier(s), et cetera, as appropriate.

General requirements

In order to apply for the Eco-label the applicant needs to comply with European, national and local requirements. In particular shall be guaranteed that:

1. The physical structure is built legally and respects all relevant laws or regulations of the area on which it is built, especially any related to landscape and biodiversity conservation .

2. The physical structure respects the European, national and local laws and regulations regarding energy conservation, water sources, water treatment and disposal, waste collection and disposal, maintenance and servicing of equipment, safety and health dispositions.
3. The enterprise is operational and registered, as required by national and/or local laws and its staff are legally employed and insured.

[Return to Index](#)

2.2 Putting together the application form and dossier

The applicant then completes the application form. The documentation and appropriate declarations and supporting material relating to the performance of the campsite must be collated in the dossier to demonstrate that it complies with the criteria. The dossier should include an illustration of the proposed usage of the EU eco-label. If the application is successful, the applicant will be expected to retain the dossier and keep it up to date for the duration of the licence.

The digital application form has to be filled out in all details, saved and submitted to the relevant Competent Body, accompanied by the printed, signed and scanned letter contained in the application form which declares that the information submitted is true and the campsite corresponds to the requested criteria.

GENERAL INFORMATION FOR THE COMPILATION OF THE ELECTRONIC VERIFICATION FORM

The aim of this file is to assess that the campsite complies with the requirements of the EU eco-label scheme. It must be filled in by the applicant in all its relevant parts and sent to the Competent Body with the requested documentation attached as scanned files in pdf format.

The spreadsheet consists in 4 sheets other than this information, concerning:

"Applicant's data" where the applicant must fill in detailed information about his campsite and the services offered, answering each field.

"Mandatory Criteria" in which the applicant must declare to comply with and provide the specifications required for each mandatory criterion. When a criterion is not applicable, justification of non applicability shall be given in the "answers note" cell. The full explanation for each criterion is visible positioning the pointing device over the criterion's number.

"Optional Criteria" in which the applicant has a wide range of possibilities in order to find the

requirements which best fit his possibilities and his environmental policy, and which are applicable in his case, and so declare, where appropriate, the compliance with the criteria and provide every specification required. Each of the criteria set out in this Section has been attributed a value expressed in points or fractions of points, therefore all criteria have to be answered, either affirmative or negative or with the relevant data. In order to qualify for the award of the Eco-label, campsites must score a minimum of points (see the user manual for further information). The full explanation for each criterion is visible positioning the pointing device over the criterion's number.

ATTENTION: In these three sheets, all "answer/option" cells have to be compiled, otherwise the application will not result valid.

"Total Score" the sheet, strictly consultative, that provides the applicant with the final score achieved by his campsite. The data on the sheet result from the answers given by the applicant in the other sheets and cannot be modified if not changing the answers in the relative sheets.

"Consumption tables" the last sheet, in which the applicant must insert the consumption data collected during the last semester. (See criteria n°28-29)

Explanation regarding the single columns:

REQUEST: this field specifies the exact requirements of the criterion, asking the applicant to declare his compliance with it. This field is for information only and cannot be modified.

ANSWERS/OPTIONS: in this field, the applicant answers if he complies with what the criterion asks for, as specified in the REQUEST field. Generally the answer is YES or NO/Not applicable, in some cases it can be a value. This field has always to be answered, no matter if the campsite complies with the request or not, otherwise the application will result not valid. Further information has to be inserted into the ANSWERS NOTE field.

ANSWERS/NOTE: this field contains all further information regarding the REQUEST which is not sufficiently answered in the ANSWERS/OPTIONS field, such as reasons for non applicability of the criterion in the Mandatory section and detailed values and specification for the Optional section. This field has to be filled in only where further information is requested.

DOCUMENTS TO BE ATTACHED: this field specifies the documentation which the applicant has to produce and attach to the application, as requested by the criterion. The User Manual contains more detailed information regarding the necessary documentation which has to be supplied together with the application, and how it shall be obtained in the section for each criterion with the same name. All documents, prior to being scanned into the computer, have to be signed and stamped by the responsible (legal representative, or at least part of the managing staff) of the firm, including the date of signature, which shall not be further than 6 months from the proof of either postal or electronic invoice of the application.. This field is for information only and cannot be modified.

COMPLIANCE CHECK (Mandatory Criteria): This field is automatically generated depending on the answers given by the applicant. It cannot be modified if not changing the answer in the ANSWERS/OPTIONS part.

SCORE and TOTAL SCORE FOR CRITERION (Optional Criteria): These fields are automatically generated depending on the answers given by the applicant. They cannot be modified if not changing the answers in the ANSWERS/OPTIONS part.

[Return to Index](#)

2.3 Application and licence fees

[Insert details of fee levels and invoicing arrangements where different]

Fees may differ slightly in EU Member States, because the scheme permits Competent Bodies to set fees within a stated range, according to Regulation (EC) N°66/2010, of 25 November 2009. Competent Bodies may also have different practices about exactly how and when they collect fees.

Application fee

A non-returnable application fee is payable when an application is made. It does not apply to renewals, or when an existing product is modified or new products are added to an existing contract. According to Annex III of Regulation (EC) N° 66/2010, the application fee shall be no lower than EUR 200 and no higher than 1200.

Application fee

If the application is successful, an annual fee could be required by the Competent Body, starting from the date that the EU eco-label licence is awarded to the applicant. According to Annex III of Regulation (EC) N° 66/2010:

- 1.The annual fee for the use of the label will be up to EUR 1500
2. In the case of small and medium enterprises and operators in developing countries, the maximum annual fee shall be no higher than EUR 750

3. In the case of micro-enterprises the maximum annual fee shall be EUR 350

These figures exclude costs of any necessary additional tests or monitoring by the Competent Body, including site visits, for which the Competent Body will invoice the licensee.

Payment will be collected annually by the Competent Body, that will invoice the licensee accordingly for payment by its procedures. The Competent Body will apply all relevant discounts, but will ask for the relevant proof

[For further details on the annual fee, including its calculation basis, please contact your Competent Body](#)

[Return to Index](#)

2.4 When the application is received

The Competent Body allocates a unique number to each application.. If the application is successful this number will be used to register the contract

As a notional example,

XX / 26 / 01 would be made up currently as follows:

XX: the initials of the designated Competent Body according to the State (IT for Italy, for example)

26: the product group code (here campsite service)

01: the progressive application number for that product group (thus identifying the applicant)

The Competent Body will check that the application is complete, and consider the dossier to assess whether the application complies with the product group criteria, and that the application conforms with the verification requirements. It may require further proof of some declarations or arrange an appointment to visit or audit the applicant's site. If the applicant sub-contracts part of the campsite service, the Competent Body may visit the sub-contractor (s) on the same basis.

If the Competent Body awards the applicant a licence to use the EU eco-label, the applicant is included in the list of eco-labelled products on the Commission's register and website.

[Return to Index](#)

2.5 After the EU eco-label is awarded

Once the EU eco-label has been awarded, the licensee can display the logo inside and outside his campsite and use it in advertisements, provided that the conditions in the Contract are observed.

[Return to Index](#)

2.6 Compliance monitoring

The Competent Body or its authorised agents may undertake any necessary investigations to monitor the ongoing compliance by the holder of the EU eco-label licence as regards both the product group criteria and the terms of use and provisions of the contract. For this purpose the Competent Body may request, and the holder shall provide, any relevant documentation to prove such compliance, or carry out audits. In such cases the Competent Body may request to visit the premises at any reasonable time with or without notice, and the holder shall grant access.

On-site inspections are recommended to be performed by the Competent Body.

The applicant shall pay all expenses for tests and verifications related to the application, holding and use of the EU eco-label. The Competent Body can require reasonable costs needed to cover the assessment procedure. Methods of monitoring may vary in EU Member States, but the aim is to ensure that all products conform to the criteria, irrespective of the EU Member State where the application is made.

In order to maintain simplicity in the verification documents required for this product group, the documentation to be sent at the moment of application has been kept to a minimum.

However, the Competent Body may ask for additional documentation. The applicant shall provide this documentation either by mail or at the moment of the on site inspection.

The monitoring process is likely to be simpler where the applicant holds a recognised quality standard (eg ISO or EMAS) and uses certified suppliers.

(*Note:* it is not required to implement such management schemes.).

[Return to Index](#)

2.7 Renewing the contract

When the published criteria for a product group are revised, licensees should renew their contracts.

[Return to Index](#)

2.8 Modifications to eco-labelled products, and adding new products

Modifications

As stated above, products already covered by the EU eco-label licence may be modified, but must remain in compliance with the criteria at all times. **A new application is not required for modifications in product characteristics which do not affect compliance with the criteria** (for example, changes of colour, size and design), **but the Competent Body must be informed in writing about significant modifications, such as changes of name.**

To do this, applicants should send to the Competent Body:

- * the name of the eco-labelled campsite
- * the number of the eco-label licence;
- * a description of how the modification affects the eco-labelled product or range of products (eg whether the change is simply in product name, or if it has ceased activity or other);
- * confirmation that:
 - a. the campsite service is already covered by the dossier submitted with the original application;
 - b. the campsite service is still in complete conformity with the EU eco-label criteria.

New products

Where an applicant wants the current licence to be extended to cover other campsites under the same management in the same administration district (district which has access to the same local facilities and is under the same local laws) the new application form and dossier regarding the new structures should be submitted but the Competent Body will not charge an application fee.

[Return to Index](#)

2.9 Withdrawal or expiry of the EU eco-label

The Competent Body can suspend or withdraw the right to use the EU eco-label for the product concerned where the terms of the contract are breached.

In the same way, at the end of the criteria validity, the applicant will not refer to the EU eco-label, although in these circumstances the Competent Body will make allowance for the time needed to sell already printed promotional material. At this time, revised criteria are likely to be developed. Licence holders will have at least six months to reapply against the new Commission Decision regarding renewed criteria. A new contract can be signed between the Competent Body and the applicant after checking conformity with the new criteria.

[Return to Index](#)

3. Product group definition and criteria requirements

The product group definition for *campsite service* is set out in the box below.

The product group “campsite service” comprises, as a main service provided for a fee, the provision of pitches equipped for mobile lodging structures within a defined area. It can also comprise other accommodation facilities suitable for the provision of shelter to lodgers and collective areas for communal service if they are provided within the defined area.

The “campsite service” provided within the defined area may also include the provision, under the management or ownership of the campsite, of food services and leisure activities.

In the framework of this Decision, food services include breakfast; fitness and leisure activities/facilities include saunas, swimming pools and all other such facilities, which are within the accommodation grounds and green areas such as parks and gardens, which are open to guests, and which are not part of the campsite structure.

Criteria for the EU eco-label for *campsite service* have been agreed by taking into account various impacts at each step of the product's life cycle, including ***the purchases conducted in order to provide the service, the use of the service facilities, the management of the waste produced as a result of the service.*** They are listed in the formal Commission Decision of *2009/564/EC, of 9 July*.

The criteria aim in particular at: reducing consumption of energy from fossil fuels, reducing consumption of chemically treated water and of chemical substances contained in detergents and disinfectants, as well as reducing unsorted waste production without undermining the fitness for use of the final service.

More specifically, they aim at ensuring the use of energy efficient heating and electrical devices, saving water through technological devices where necessary, training staff in order to put in implement environmental management behaviour such as avoiding excessive use of chemical substances, separation and proper disposal of waste. As a whole, the criteria aim at improving management measures toward a more conscious and efficient environmental performance from lead, staff and guests.

The criteria will be valid for three years from the date of notification of the Commission Decision, then, there shall be the revised edition of the campsite service EU eco-label.

In order to make sure that the applicant is considering the most recent version of the criteria, it is best to confirm with the relative Competent Body the latest edition.

Health, safety and other environmental requirements

Products awarded the EU eco-label must also comply with the general provisions of the Regulation (EC) N° 66/2010. Article 6 of the Regulation states the general requirements of the EU Ecolabel criteria, including that the EU eco-label may not be awarded to goods containing substances or preparations/mixtures meeting the criteria for classification as toxic, hazardous to the environment, carcinogenic, mutagenic or toxic for reproduction (CMR), , in accordance with Regulation (EC) N°1272/2008, on classification, labelling and packaging of substances and mixtures, nor to goods containing substances referred to in article 57 of Regulation (EC) N° 1907/2006, concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) .

[Return to Index](#)

4. Terms and definitions

Accommodation type: since the EU eco-label is awarded to the campsite service, and tourist accommodation structures, as follows is a list of the many different lodging structures which can apply to one of the two EU eco-labels. The different types of accommodation structures are classified according to Commission Decision 99/35/EC and are as follows:

Accommodation type	Accommodation type
COLLECTIVE ESTABLISHMENTS	OTHER COLLECTIVE ACCOMMODATION
HOTELS	Holiday dwellings
Hotels	campsites

Motels	Youth hostels
apt. Hotels	Group accommodation and holiday homes for elderly, employees, workers and students
roadside inns	mountain refuges (mountain huts)
beach hotels	SPECIALISED ESTAB.
residential clubs	Accommodation related to Health establishments
SIMILAR ESTABLISHMENTS	Accommodation related to work and holiday camps
boarding houses	Accommodation related to Conference centres
tourist residence	PRIVATE ESTABLISHMENTS
Bed and Breakfast (B&B)	Rented rooms in family houses
Farmhouse	Dwellings rented from private individuals or professional agencies
Country House	

Any type of accommodation which is listed in addition to campsites, is sheltered accommodation, and should be regarded as such for the consideration of any relevant issue.

The definition of campsite for the EU eco-label purposes is as reported in the product group definition.

Air conditioning: the air conditioning devices considered in this document are Room Air Conditioners (RAC). The following table reports the devices included and excluded in RAC.

Included in the RAC	Excluded from the RAC
Single-packaged units	Spot air-conditioners
Split-packaged units	Dehumidifiers
Multi-split packaged units	Close-control air-conditioners
Single-duct air-conditioners	Control cabinet air-conditioners
	Evaporative coolers
	Desiccant coolers

Assessment: evaluation of compliance with criteria requirements. In order to assess compliance, verification documents shall be required.

Auto-production (of energy in this document): production of energy which originates within the campsite grounds. For example, if the campsite has a photovoltaic system or a wind energy system it has auto-production of electricity; if it has solar heat panels, it has auto-production of energy used for heating purposes.

Biomass: all organic matter is known as biomass; the energy released from biomass when it is eaten, burnt or converted into fuels is called biomass energy.

Bushmeat : is usually understood to refer to the meat of any terrestrial wild animal used for food. The animals include primates such as Gorillas and Chimpanzees, but also elephants, buffalo, zebra, hippopotamus as well as rodents and birds. It is the opposite of "domestic meat" which is grown purposefully for food by man. It is most commonly hunted in the equatorial forests of west and central Africa.

Chemical toilet: A self-contained toilet, where the waste material is held in a sealed tank for periodic emptying. Special chemical fluid added to the tank helps to break down the waste, and keeps the system free of unpleasant odours.

Combined heat and power (CHP): energy generation technology which efficiently uses the fuel for both electricity and heat production. It is not in itself a renewable source of energy, however, due to the efficiency with which it produces energy, for the purposes of this document it has been considered as environmentally positive as the production of energy through renewable sources of energy. Often combined heat and power plants do use renewable sources of energy. CHP is applicable mostly in larger buildings such as apartment blocks, hospitals, hotels, leisure centres, airports, shopping centres, and other large office buildings.

(According to EUROSTAT, the EU average overall efficiency of CHP plants was in 1998 74,9% compared with an average conversion efficiency of 39,4 % in conventional power generation (CHP Statistics (1994-98) Draft Summary Report and EUROSTAT figures on conventional power generation in Commission Staff Working Paper "Completing the internal energy market", SEC(2001)438).)

Community eco-label: see eco-label

Competent Body: organisation responsible for the application of the EU eco-label in every Member State. The Competent Body gives information on application, distributes this application pack and is responsible for the verification of compliance prior to the award of the EU eco-label and during the validity of the contract in case the award is granted.

District heating/cooling: transportation of heat or cold from the generation plant which is away from the household/company units but is connected to each household unit by tubes. Connection to existing district heating or cooling networks offer an energy efficient option to meet the heating or cooling demand of a building.

Double glazing: window insulation whereby two layers of glass of the same window are separated by an air gap.

Eco-label: a label which promotes the reduction of negative environmental impacts of the products or services to which it applies. The Community eco-label is the official eco-label of the European Union, in this document it is written in the shortened form EU eco-label, which seemed more appropriate for clarity and length. In some criteria, reported from Commission Decision on campsite service, the EU eco-label is called Community eco-label or simply eco-label. The EU eco-label is a type I Eco-label.

Electric mains-operating appliance: appliance which derives its energy from the electricity provided by the central (mains) system.

Electricity consumption: kWh of electricity which are used by the campsite. For the purpose of measurements the yearly consumption is intended.

EU eco-label: see eco-label

Facilities: means or equipment supplied for an activity.

Fitness activities: see leisure activities

Food services: those services which include distribution of food and/or drink, including shops and kiosks.

Geothermal Energy: energy coming from the natural heat of the earth stored in rock and water within the earth which can be extracted by drilling wells to tap anomalous concentrations of heat at depths shallow enough to be economically feasible. Low enthalpy resources (50°C to 150°C) can be used for heating purposes: large base load demands such as district heating, horticulture, recreational uses such as spas. Medium and high enthalpy resources (> 150°C) are used for electricity production.

Glazing: the glass or plastic panes in a window, door, or skylight.

Green areas: areas which include grass or plants planted on ground.

Hazardous waste: see waste.

Heat pumps: a heat supply option, which, under certain circumstances, can contribute positively to saving energy in buildings. Heat pumps can have high efficiencies and are applicable in some cases both for single and multi-family dwellings for space heating. Usual efficiencies are higher than 200% .

Heating from RES : heating of air and sanitary hot water deriving from geothermal, solar, combustible renewable (biomass) and waste.

Insulation: construction materials used for protection from noise, heat, cold or fire.

ISO 14024 eco-label guidelines: see Type I eco-label

Leisure activities: all those activities offered by the campsite such as personal care, such as saunas, or sports, such as swimming, and all other such facilities which are within the campsite grounds and those green areas which are not part of the campsite structure, such as parks, woods and gardens which are open to guests, such as excursions and other fun/ educational activities, such as trekking or nature walks.

Local food product: a product which has been caught or harvested within 100 km of the campsite or, if the geographical conditions of the country require to consider greater distances, it is a product which distinctly reflects a traditional national economy.

Main ingredient: the ingredient which is contained in most amount in a dish. For example: flour for bread and cakes, milk for creams and curds, vegetables for side dishes and salads (making specific reference to the most used types) etc.

Main supplier : one of the 10 main suppliers of the campsite in terms of quantity of products provided or entity of the service. For example: provider of soap, detergents, paper, food, may be among the main providers of goods. Agencies responsible for out-sourced laundry service, maintenance of HVAC or maintenance of office equipment may be among the main service providers.

Mobile lodging structures: tents, caravans, mobile homes and camper vans.

Mountain areas: areas similar to mountain areas from the point of view of isolation are considered as .isolated mountain areas. independently of the altitude.

Renewable energy sources (RES): energy which comes from sources that are not based on stored energy sources. To a certain extent they can be regenerated in nature. Energy from renewable resources is more environmentally benign than energy from fossil fuels. Renewable

energy sources are listed below and can be used for electricity generation or for heating. Renewable sources of energy are: Biomass, Wind, Solar (photovoltaic and thermal), Geothermal, Wave, Tidal and Small Hydro Power. For an explanation of the single terms please look at the single voice in this glossary.

Roof Landscaping: By means of planting on the roofs, the sealing of landscape is reduced and valuable living space for micro organisms is created. Roof landscaping is a relatively easy method, which can be realised without professional help. It is best to use sedum plants because they do not require any further cultivation. It has to be clarified in advance, whether the roof is able to hold the extra weight.

Sheltered accommodation: the service provided by a structure whereby the guest is given adequate equipment and service to stay overnight safely and comfortably without providing for his own bedding equipment.

Small Hydro Power: Hydro Energy plant producing less than 10 MW electric energy. Schemes require a suitable rainfall catchment area, a hydraulic head, a pipe or millrace carrying water to the turbine and a turbine house containing power generation and water regulation equipment. **Hydro Power** in general is produced from the movement of a mass of water: streams, rising and falling of tides through lunar (and solar) gravitation, wave energy, energy of sea currents.

(Soil) Sealing: Soil sealing is the covering of the soil surface with an impervious material or the changing of its nature so that the soil becomes impermeable, such that soil is no longer able to perform the range of functions associated with it. Sealing is one of the most severe impacts on soils. It is the extreme of urban soil degradation and due to its exclusion of vegetation an extreme of desertification. Sealing is defined by an un-permeable or in part permeable surface or subsurface layer of a minimum size of at least 1 m cross section in two directions.

Solar Photovoltaic: direct conversion of solar radiation into electricity. Photovoltaics are one of the few renewable technologies which can be integrated into the urban landscape.

Solar Thermal: conversion of solar radiation into heat for technological comfort heating and cooking purposes. Solar thermal heating is applied to water, air or structural materials. Conversion of light to heat can be achieved through passive or active systems by mechanically transferring heat by means of a working fluid such as oil, water or air.

Spillage: drops or other liquid material falling outside of the intended container. Spillage of toxic material is equivalent to dumping said material into the environment, thus causing pollution and other negative effects.

Third party: in certification, a third party is that which is not personally involved in the workings of the certified element, therefore can act as an objective certifier.

Type I Eco-label: (ISO TYPE I) an eco-label which has been developed according to the ISO 14024 guidelines. These guidelines include taking into consideration the life cycle of the eco-labelled product, carrying out consultation with stakeholders, guaranteeing transparency of the criteria development and third party verification of compliance with the criteria.

U-FACTOR: a measure of the rate of non-solar heat loss or gain through a material or assembly. It is expressed in units of $W/sq\ m-^{\circ}C$. Values are normally given for NFRC/ASHRAE winter conditions of $18^{\circ} C$ outdoor temperature, $21^{\circ} C$ indoor temperature, 15 mph wind, and no solar load. The U-factor may be expressed for the glass alone or the entire window, which includes the effect of the frame and the spacer materials. The lower the U-factor, the greater a window's resistance to heat flow and the better its insulating value.

Verification : the establishment or confirmation of the truth of compliance with the criteria.

Waste: any substance or object which the holder disposes of or is required to dispose of pursuant to the provisions of the national law in force (article 1 (a) of Directive 75/442/EEC). In particular hazardous waste has been taken into consideration by Directive 91/689/EEC Annex III (included in this manual). The most recent list which has been drawn up identifying different products to be waste and hazardous waste products is that of the Annex of Commission Decision 2000/532/EC. The hazardous waste products are those listed by this Directive which have one or more of the properties listed in Annex III of Directive 91/689/EEC

Waste water : the water which comes out of the campsite as a result of provision of the campsite service.

Waste water plan : a plan from the local water authorities showing how to manage liquid waste so as to obtain the waste water which can best be handled by the local treatment plant, according to its type and working conditions.

Waterless Urinals: Conventional urinals use at least three litres of water per flush, whereas waterless urinals need neither water nor a flushing system. These new urinals save costs and above all water without making concessions on convenience. At the same time they improve hygiene. The urine flows off the smooth surface of the urinal into a siphon that serves to trap the odour - this is the centrepiece of all waterless urinals, and each producer constructs it in a slightly different way. The siphon contains a liquid sealant that has a lighter-than-water specific density. This floats to the top, allowing the urine to flow through it and away, taking any odours with it. The liquid sealant remains in the siphon. Waterless urinals have no joints or cracks which bacteria can colonise. The special surface repels most liquids and impurities. Cleaning therefore involves less cost and effort than with conventional systems, and strong

toilet cleaners are unnecessary. With some systems, water and disinfectant are enough to guarantee hygienic operation. Maintenance work involves replacing the siphon and disinfecting the urinal, and this can easily be carried out by the owner or by a specialist firm in the scope of a service agreement. The sewage pipes no longer become blocked with deposits because uric scale only forms when urine comes into contact with water. Waterless urinals are functional, economical, hygienic, virtually odour-free, non-contact, and - as the name says - use no water at all.

Wind Energy: energy extracted from the wind by transferring the momentum of passing air to rotor blades.

[Return to Index](#)

5. Technical criteria

BASIC CONDITIONS FOR APPLICATION OF THE EU ECO-LABEL TO THE campsite SERVICE. GENERAL LEGAL REQUIREMENTS.

The applicant has general compliance with the legal requirements related to the service provided and the campsite is in compliance with the legal requirements related to land use permits, local legislation, landscape integration and management of natural resources and biodiversity.

Criteria: applicability and scoring

The criteria are divided into sections, Section A and Section B criteria.

Section A criteria

All the criteria in Section A must be fulfilled, if applicable. This means unless required by law for some criteria, clearly indicated in the criterion or considering the specific situation of the campsite.

Conditions for applicability are specified for each criterion in the digital application pack.

Documentation of non-applicability shall be provided as well as that for compliance.

Section B criteria

The criteria in Section B are scored from 1 to 4 points each, according to environmental effectiveness, consumer perception and technical/economic feasibility.

Each of the criteria set out in this Section has been attributed a value expressed in points or fractions of points. In order to qualify for award of the Eco-label, campsites must score a minimum number of points. If the campsite does not offer other accommodations suitable for the provision of shelter to lodgers as part of its services, the minimum score required is 20; if it does, the minimum score required is 24.

The total score required shall be increased by 3 points for each of the following additional services which are offered that are under the management or ownership of the campsite:

food services (including breakfast)

leisure/fitness activities, which include saunas, swimming pools and all other such facilities which are within the campsite grounds. If the leisure/fitness activities consist in a wellness centre, the score required shall be increased by 5 points, instead of 3.

Green areas which are not part of the campsite structure, such as parks, woods and gardens which are open to guests.

Examples:

a campsite providing one additional service, such as breakfast **or** a swimming pool needs to reach $20 + 3$ points;

a campsite providing two additional services, such as a shop **and** a swimming pool, needs to reach $20 + 3 + 3$ points => 26 points;

a campsite providing rental accommodation and one additional service, such as breakfast, needs to reach $24 + 3$ => 27 points.

a campsite providing two additional services which include a wellness centre, such as a restaurant **and** a wellness centre, needs to reach $20 + 3 + 5$ points => 28 points.

Third party management of extra facilities and/or activities

The criteria are intended to be applicable only to those activities which are under ownership or direct management of the campsite service.

Verification documents and on-site inspections

In order to facilitate application and reduce paper work, documentation to be produced at the time of application has been kept to a minimum. However, the Competent Body may require further documentation for the evaluation of compliance to the criteria. Such documentation is listed in the section below under "Verification Documents", and shall be provided by mail or during an on-site inspection.

Competent Bodies have to conduct an on-site inspection of the applicants.

General legal requirements

As required by Regulation (EC) N° 66/2010 any campsite applying for the EU eco-label has to comply to community and national/regional regulation regarding that specific provision of service, in particular legislation regarding the following issues (see also the first part of the digital verification forms):

- the legal requirements related to the service provided;
- the legal requirements related to building permits;
- the legal requirements related to safety issues
- the legal requirements regarding landscape integration, management of natural resources and on biodiversity.

All necessary proof has to be kept ready and provided at request that

- the physical structure is built legally and respects all relevant laws or regulations of the area on which it is built, especially any related to landscape and biodiversity conservation .
- the physical structure respects the European, national and local laws and regulations regarding energy conservation, water sources, water treatment and disposal, waste collection and disposal, maintenance and servicing of equipment, safety and health dispositions.
- the enterprise is operational and registered, as required by national and/or local laws and its staff are legally employed and insured.

Condition for application

These requirements are applicable to all

campsites.

Assessment and verification: *The applicant shall provide technical documents and measurements and declarations from public authority which certify its compliance with these requirements.*

Compliance and documents to be attached

Answering "Yes" in the sector of the digital verification form dedicated to the general requirements (Mandatory criteria, Row 2), the applicant declares that the campsite complies with the legal requirements related to the service provided, to the building permits, to landscape integration, management of natural resources and biodiversity,

by the necessary documents such as, for example, registration number of the activity and any buildings connected, any additional document for those campsites which lay within a protected area such as a copy of the chart regulating special norms and documentation of fulfilment of any particular requirement expressed in the document.

supported

[*Return to Index*](#)

SECTION A

CRITERIA

REFERRED TO IN ARTICLE 2, FIRST PARAGRAPH

All the criteria in this part must be complied with and each criterion refers to the entire campsite service. When a criterion is not applicable, justification of non applicability shall be given.

ENERGY

1. Electricity from renewable sources

At least 50 % of the electricity used for all purposes shall come from renewable energy sources, as defined in Directive 2001/77/EC of the European Parliament and of the Council of 27 September 2001 on the promotion of electricity produced from renewable energy sources in the internal electricity market.

This criterion does not apply to campsites that have no access to a market that offers electricity generated from renewable energy sources.

Binding contract restrictions (such as the prevision of penalties) of at least 2 years for the change of power supplier can be considered as "no access" to a market that offers electricity generated from renewable energy sources

Condition for application

This criterion applies only to campsites that have the option of selecting various alternative energy providers, or that can produce at least 50% of their energy themselves.

If the amount of renewable energy purchased or produced is less than 50%, the remaining difference should be either self-produced or purchased from a clean energy provider.

All agreements with energy suppliers that do not meet the minimum level of 50% should either be cancelled or not renewed. Where this is not possible due to contract restrictions, the criterion can be considered not applicable, but the campsite has the obligation of researching and applying to an alternative energy provider as soon as possible. In this case the applicant has to produce documentation reporting a list of the electricity providers available and a declaration on the impossibility to provide electricity from renewable energy resources and the date when the provider could be able to provide it. If energy is self-produced (e.g. campsites in remote locations using generators) the annual energy consumption should be calculated in order to determine if the minimum level of 50% is being achieved.

Context:

This criterion refers to the energy section and its main scope is to reduce climate change and acid rain. Renewable energy sources are more environmentally friendly than non renewable sources of energy, such as fossil fuels.

Assessment and verification: *The applicant shall supply a declaration from (or the contract with) the electricity provider reporting the nature of the electricity source(s), the percentage of electricity supplied that is from a renewable source, documentation on the boilers (heat generators) used, if any and an indication of the maximum percentage that can be supplied. According to Directive 2001/77/EC, renewable energy sources shall mean renewable non-fossil energy sources (wind, solar, geothermal wave, tidal, hydro power, biomass, landfill gas, sewage treatment plant gas and biogases. In case the campsites have no access to a market that offers energy from renewable energy sources, documentation demonstrating the request for renewable energy has to be supplied.*

Compliance and documents to be attached

- a. if there is on the market a supplier who can provide at least the 50% of RES, the applicant shall request at least 50% RES electricity of the overall electricity provided;
- b. if the level of 50% of RES electricity cannot be provided the applicant shall request the highest possible percentage provided;
- c. if the campsite has an auto-production of RES electricity for at least 50%, the criterion is fulfilled;
- d. if the campsite has an auto-production of RES electricity less than 50%, the applicant shall purchase the difference in percentage from the electricity provider;
- e. in any of the above stated situations, the applicant shall provide a declaration or contract from the electricity supplier/autoproduction technician indicating the nature of the renewable energy sources used/produced, the percentage of the electricity supplied/produced which is from a renewable source, and the maximum percentage which can be supplied/produced .
- f. if the campsite has no access to a market that offers energy from renewable energy sources, the applicant shall provide proof that the supply of renewable energy has been requested and no such is available. In case of binding contract restrictions which make the change to a supplier with RES electricity impossible, such restrictions have to be demonstrated, and the effort to find RES energy suppliers as soon as possible has to be documented.

Electronic Verification Form: Mandatory Criteria, Row 5-8

Note:

The following points need to be considered:

auto-production (such as photovoltaic) is included in the percentage for reaching the RES electricity limit, therefore, for example, if the applicant produces electricity from renewable resources for 50% or more, this criterion is fulfilled;

if the applicant's own-production does not reach 50% the applicant shall purchase the difference in percentage from the electricity provider, so that the percentage of RES electricity produced of the overall electricity consumption +the percentage of RES electricity purchased from the electricity provider = 50%.

For example, if the campsite auto- produces 22% of its electricity consumption, it shall purchase

electricity from an electricity provider with a mix equal to approximately 36% RES electricity
For example, if the tourist accommodation auto- produces 22% of its electricity consumption, it shall purchase electricity from an electricity provider with a mix equal to approximately 36 % RES electricity :

$$0.22 + 0.78A = 0.5$$

$$0.78A = 0.28$$

$$A = 0.36$$

Where A – is the of % of electricity coming from RES (renewable energy sources) in the mix provided by the electricity provider, necessary to fulfil the 50 % hurdle of the electricity used for all purposes coming from renewable energy sources.

The auto production electricity is calculated on the overall electricity consumption per year, the RES electricity purchased from the electricity provider is calculated on the total electricity provided (electricity mix).

[Return to top of criteria](#)

2. Coal and heavy oils

No heavy oils having a sulphur content higher than 0,1 % and no coal shall be used as an energy source. coal for decorative fireplaces is excluded from this criterion.

This criterion only applies to campsites that have an independent heating system.

Context

This criterion refers to the energy sector and its main aim is that of diminishing acid rain and particles in the atmosphere. CO₂ emissions of coal are almost double than CO₂ emissions of gas. Heavy oil has one third higher CO₂ emissions than natural gas. The combustion of heavy oil creates 30% higher CO emissions than gas. coal creates 300% higher CO emissions than gas.

Condition for application

This criterion is applicable to campsites having an independent heating system.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, indicating the nature of the energy sources used.*

Compliance and documents to be attached

a. If the applicant has a coal boiler he shall replace it with another boiler, taking into consideration criterion n.3 with respect to new boilers;

- b. if the applicant has a boiler using heavy oils, he shall ensure the use of fuel having sulphur content below 0.1% or change his boiler taking into consideration criterion n. 3 with respect to new boilers;
- c. in any of the above stated situations, the applicant shall indicate the nature of the energy sources used.

Electronic Verification Form: Mandatory Criteria, Row 9-11

Note: Criterion n. 3 regarding new boilers refers to the purchase of high efficiency boilers within the duration of the EU eco-label award (see criterion below). It would be advisable, and economically beneficial, to purchase a high efficiency boiler in this case, even if prior to the EU eco-label award.

[Return to top of criteria](#)

3. Efficiency and heat generation

If a new heat generating capacity is installed within the duration of the Eco-label award, it shall be a high efficiency cogeneration unit (as defined by Directive 2004/8/EC of 11 February, on the promotion of cogeneration based on a useful heat demand in the internal energy market and amending Directive 94/42/EEC), a heat pump or an efficient boiler. In the latter case, the efficiency of such a boiler shall be of 4 stars (ca. 92 % at 50° C and 95% at 70° C), measured according to Council Directive 92/42/EEC of 21 May 1992 on efficiency requirements for new hot water boilers fired with liquid or gaseous fuels, or according to relevant product norms and regulations for those boilers not covered by this Directive. Existing hot-water boilers fired with liquid or gaseous fuels as defined in Directive 92/42/EEC shall comply with efficiency standards at least equivalent to three stars as stated in the Directive. Existing cogeneration units shall comply with the definition of high efficiency in Directive 2004/8/EC. The efficiency of boilers excluded from Directive 92/42/EEC shall comply with the manufacturer's instructions and with national and local legislation on efficiency, but for such existing boilers (with the exception of biomass boilers) an efficiency lower than 88% shall not be accepted.

Context

This criterion refers to the energy section and is aimed at reducing CO and CO₂ emissions by assuring an adequate efficiency of the heat generating capacity.

Condition for application

The criterion is applicable to campsites with new heat generating systems purchased within the duration of the EU eco-label award and to existing hot-water boilers and existing cogeneration units.

Assessment and verification: *The applicant shall provide technical specification from those responsible*

for the sale and/or maintenance of the boiler indicating its efficiency.

Compliance and documents to be attached

The applicant shall

a. ensure that any new heat generating system purchased within the duration of the EU eco-label award is either a high efficiency cogeneration unit (as defined by Directive 2004/8/EC), or a heat pump or a boiler with 4 star efficiency (92/95%) and provide technical specification indicating the compliance with the Directive or the efficiency.

OR

b. ensure that existing hot-water boilers fired with liquid or gaseous fuels as defined in Directive 92/42/EEC shall comply with efficiency standards at least equivalent to three stars as stated in the Directive and existing cogeneration units shall comply with the definition of high efficiency in Directive 2004/8/EC.

c. ensure that any new heat generating system excluded by the Directive 92/42/EEC has similar performances, according to product, norms and regulations, but in no case lower than 88% (with the exception of biomass boilers);

d. provide technical specification from those responsible for the sale/maintenance of the heat generating system indicating the efficiency.

Electronic Verification Form: Mandatory Criteria, Row 12-17

Note: Exclusion criteria of boilers from Directive 92/42/EEC

Article 3 of Directive 92/42/EEC excludes the following boilers: hotwater boilers capable of being fired by different fuels including solid fuels; equipment for the instantaneous preparation of hot water; boilers designed to be fired by fuels the properties of which differ appreciably from the properties of the liquid and gaseous fuels commonly marketed (industrial waste gas, biogas, etc); cookers and appliances designed mainly to heat the premises in which they are installed and, as a subsidiary function, to supply hot water for central heating and sanitary hot water.

[Return to top of criteria](#)

4. Air conditioning

Any household air conditioner bought within the duration of the Eco-label award shall have at least Class A energy efficiency as laid down in Commission Directive 2002/31/EC of 22 March 2002 implementing Council Directive 92/75/EEC with regard to energy labelling of household air-conditioners, or have corresponding energy efficiency.

Note: This criterion does not apply to air-conditioners that are appliances that can also use other energy sources, or to air-to-water and water-to-water appliances, or to units with an output (cooling power) greater than 12 kW.

Context

This criterion refers to the energy section and its aim is to promote the use of efficient systems in order to reduce electricity use.

Condition for application

The criterion is applicable to campsites having an electric mains operated air conditioning system included in Directive 2002/31/EC. The following air conditioning appliances are excluded from the labelling and this criterion is not applicable to them:

- appliances that can also use other sources of energy,
- air-to-water and water-to water appliances,
- units with an output (cooling power) greater than 12 kW.

Assessment and verification: *The applicant shall provide technical specifications from the manufacturer or the professional technicians responsible for installation, sale and/or maintenance of the air conditioning system.*

Notes:

The air conditioning devices covered by the criterion include:

Single-packaged units - contain all the physical components of the air conditioning unit in a single case. These units are mounted inside the room.

Split-packaged units - consist of indoor and outdoor sections. The inner heat exchanger, or coil, is mounted above the furnace inside the ducting. The outer section consists of the remaining components and both sections are joined by cooling pipes.

Multi-split packaged units - designed to circulate fresh air to several areas within a room.

These air conditioning units are designed in a flat way. These units are ideal for campsites being renovated.

Single-duct air-conditioners - A central air conditioning unit which is installed in the ceiling of the room. This air is circulated via the ceiling to wherever needed .

The criterion excludes the following types:

Spot air- conditioners - used to cool equipment

Dehumidifiers - units which dehumidify areas such as walls and furniture. The energy efficiency of dehumidifiers is measured by calculating liters of water removed per kilowatt-hour (L/kWh). A higher energy factor means a more efficient dehumidifier. Qualified energy star dehumidifiers models are available.

Close-control air-conditioners - Central air conditioners specifically designed for usage in data processing. This type of air conditioning units is designed to cool IT-equipment; There is no energy efficiency standard in for close control air conditioners in Europe.

Evaporative coolers - an air conditioning unit that produces effective cooling through water evaporation. This type of air conditioning unit is designed for a low humid environment. This system works by pulling fresh outdoor air through a wet pad where it is cooled by evaporation and circulated

through the building. The usage of this kind of air conditioning system can significantly reduce indoor temperature. Evaporative coolers cost 50% less than central air conditioners and use about 25% of the energy.

Desiccative coolers - uses the cooling effect of evaporating water to regulate air temperature. They are also known as “Adsorption air conditioning”.

The performance is generally measured using an energy efficiency ratio (EER): $EER = P_c / P_e$

P_c = the cooling capacity of the air conditioner measured in kW

P_e = the electrical consumption measured in kW.

Accepted Energy Efficiency Ratios for different types of air conditioners

Type	Energy Efficiency Class	Energy Efficiency Ratio
Air cooled; Split and multi split appliances	A	$3.2 < EER$
Air cooled; Split and multi split appliances	B	$3.2 < EER < 3.0$
Air cooled, Double ducts (packed)	A	$3.0 < EER$
Air cooled, Double ducts (packed)	B	$3.0 < EER < 2.8$
Air cooled, Single duct	A	$2.6 < EER$
Air cooled, Single duct	B	$2.6 < EER < 2.4$
Water cooled, Split and multi split appliances	A	$3.6 < EER$
Water cooled, Split and multi split appliances	B	$3.6 < EER < 3.2$
Water cooled, packaged	A	$4.4 < EER$
Water cooled, packaged	B	$4.4 < EER < 4.1$

Indicators for energy efficient air conditioning systems:

- The Seasonal Energy Efficiency Ratio (SEER) should be between 10.0 and 17.0, the higher the number the more energy efficient the model.
- An Energy Star qualified central air conditioner must have a SEER rating of at least 12 or greater for a single package unit and 13 or greater for a split system.
- More efficient compressors, larger and more effective heat exchanger surfaces, improved refrigerant flow are largely responsible for efficiency of central air conditioners.

Compliance and documents to be attached

The applicant shall

- a. check that any air conditioning system considered by Directive 2002/31/EC purchased after application to the EU eco-label and during the EU eco-label award has energy efficiency class A;
- b. provide technical specifications from the professional technicians responsible for installation, sale and/or maintenance of the air conditioning system which includes also the type of energy used for air conditioning.

Electronic Verification Form: Mandatory Criteria, Row 18-19

[*Return to top of criteria*](#)

5. Energy efficiency of buildings

The campsite shall comply with the national legislation and local building codes related to energy efficiency and the energy performance of buildings.

Context

This criterion refers to the energy section and its aim is to improve the energy efficiency of buildings in order to reduce energy consumption.

Condition for application

This criterion refers only to those buildings to which the Directive 2002/91/EC of 16 December applies.

Assessment and verification: *the applicant shall provide the energy certification under Directive 2002/91/EC of 16 December, on the energy performance of buildings or where not available in the national implementation system, the results of an energy audit performed by an independent expert on the energy performance of buildings.*

Compliance and documents to be attached

The applicant shall

- a. provide the results of an energy certification under Directive [2002/91/EC](#) as implemented by national legislation
- OR
- b. provide the results of an energy audit performed by an independent expert including the analysis of the following aspects as requested by the Directive:
 - (a) thermal characteristics of the building (shell and internal partitions, etc.). These characteristics may also include air-tightness;
 - (b) heating installation and hot water supply, including their insulation characteristics;

- (c) air-conditioning installation;
- (d) ventilation;
- (e) built-in lighting installation (mainly the no-residential sector);
- (f) position and orientation of buildings, including outdoor climate;
- (g) passive solar systems and solar protection;
- (h) natural ventilation;
- (i) indoor climatic conditions, including the designed indoor climate.

The positive influence of the following aspects shall, where relevant in this calculation, be taken into account:

- (a) active solar systems and other heating and electricity systems based on renewable energy sources;
- (b) electricity produced by CHP;
- (c) district or block heating and cooling systems;
- (d) natural lighting.

Electronic Verification Form: Mandatory Criteria, Row 20

[Return to top of criteria](#)

6. Window insulation

All windows in heated and/or air conditioned rooms and common areas shall have appropriate degree of thermal insulation according to the local regulations and climatic conditions and shall provide an appropriate degree of acoustic insulation. (This does not apply to rental caravans/mobile homes where these are not owned by the campsite management).

All windows in heated and/or air conditioned rooms and common areas added or renovated after the acquisition of the EU Eco-label shall comply with Directive 2002/91/EC of 16 March 2002, on the Energy Performance of Buildings (articles 4, 5 and 6) and Directive 89/106/EEC, of 21 December 1988, on the approximation of laws, regulations and administrative provisions of the Member States relating to construction products (Construction Products Directive - CPD) and relative national technical regulations for their implementation

Context

This criterion refers to the energy section and its aim is to reduce heat dispersion through the window. It also refers to the comfort of the guest providing adequate protection from noise.

Condition for application

This criterion is applicable to all rental accommodation, including caravans/mobile homes owned or managed by the campsite owner/manager, only to the rooms and areas which are heated or air conditioned.

Assessment and verification: *The applicant shall provide a declaration from a professional technician indicating compliance with this criterion supplying the thermal transmittance values (U-value). For windows complying with the Directive 2002/91/EC on the Energy Performance of Buildings the*

applicant shall provide the energy certification or where not available in the national implementation system, a declaration from the constructor.

Compliance and documents to be attached

The applicant or a professional technician shall

- a. provide a description of the insulation features of its windows, or state that the windows have no insulation;
- b. provide an explanation of the appropriateness of the insulation features according to climate and setting, including a description of its climate zone as defined by its national or local authority, reporting the winter situation, a description of the shading elements (such as trees or other buildings), reporting the summer situation, and a description of the surroundings reporting the noise around the campsite (The accepted level of indoor noise is specified by the WHO (World Health Organisation), with a maximum noise level 45 db(A) for comfort. However it is generally accepted that in an area dedicated to sleeping or relaxing, the noise level should not exceed 30 db(A). <http://www.who.int/docstore/peh/noise/Commnoise4.htm>. EU legislation: <http://ec.europa.eu/environment/noise/home.htm>);
- c. provide a self declaration if sufficient or a declaration from a professional technician indicating compliance with this criterion or a declaration of non applicability of the criterion.
- d. in case of rooms and areas added or renovated after the acquisition of the EU Eco-label, provide the Competent Body with proof of compliance with Directive 2002/91/EC and Directive 89/106/EEC and their relative national implementations.

Electronic Verification Form: Mandatory Criteria, Row 21-22

Note: if the windows are insulated with double glazing or equivalent, the self-declaration is sufficient. If there is no insulation or insulation less than double glazing or equivalent, a declaration from a professional shall be needed to explain how an appropriate degree of thermal and acoustic insulation is guaranteed, including at least the elements stated above.

The smaller the U-value, the higher the quality of the insulation and reduced noise pollution. Single glazed windows have an U-Value of above 3 W/m²K, double glazed windows have a U-Value of around 2 W/m²K, new double glazed windows protect against noise up to 50 dB.

[*Return to top of criteria*](#)

7. Switching off heating or air conditioning

If the heating and/or the air conditioning is not automatically switched off when windows are open, there shall be easily available information reminding the guest to close the window(s) if the heating or air conditioning is on. Individual heating/air conditioning systems acquired after the certification with the EU Eco-label shall be equipped with an automatic switch off when windows are opened.

This criterion only applies to campsites that have heating and/or air conditioning.

Context

This criterion refers to the energy section and its aim is to raise guest awareness to avoid wasting energy by heating or cooling a room which has an open window.

Condition for application This criterion is applicable to campsites having heating and/or air conditioning in rooms, rental units or common areas and no automatic switch off when windows are opened.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with the text of the information to guests (if applicable).*

Compliance and documents to be attached

The applicant shall

- a. include, in the communication material of the campsite, a statement about closing the window(s) if the heating or air conditioning are in function;
- b. provide the text of the communication and where it is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 23-24

Note:

An awareness raising sign in relevant different languages (if needed) should be placed next to the window, in the guest compendium and/or at the reception desk

[Return to top of criteria](#)

8. Switching off lights

If there is no automatic off- switch for the light(s) in the rental accommodation, there shall be easily available information to the guests asking them to turn off the lights when leaving the accommodation.

Context

This criterion refers to the energy section and its aim is to raise guest awareness to avoid wasting energy by leaving lights on when not needed.

Condition for application

This criterion is applicable to campsites lacking an automatic switch off for lights when guest leaves the rental accommodation.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with the information procedures.*

Compliance and documents to be attached

The applicant shall

- a. include, in the communication material in the campsite, a statement about switching off lights when leaving the rental accommodation;
- b. provide the text of the communication and where it is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 25-26

Note:

There are several ways of how to inform guests to manually turn off lights: near the doors of the accommodation, in the guest compendium and with a sign at the reception.

[Return to top of criteria](#)

9. Energy efficient light bulbs

(a) At least 80 % of all light bulbs in the campsite shall have an energy efficiency of Class A as defined in Commission Directive 98/11/EC of 27 January 1998 implementing Council Directive 92/75/EEC with regard to energy labelling of household lamps. This does not apply to light fittings whose physical characteristics do not allow use of energy saving light bulbs.

(b) 100 % of light bulbs that are situated where they are likely to be turned on for more than five hours a day shall have an energy efficiency of Class A as defined by Directive 98/11/EC. This does not apply to light fittings whose physical characteristics do not allow use of energy saving light bulbs.

Context

This criterion refers to the energy section and its aim is to reduce the potential electrical consumption of light bulbs with the presence of energy saving light bulbs, especially in those places where they are likely to be turned on for more than 5 hours a day. Energy efficient lamps are clearly labelled and can be identified by the European label for Energy Efficiency. This includes **Fluorescent lamps**; typical energy saving lamps which can be found in several designs. Compact fluorescent lamps are typical household lamps while tubular fluorescent lamps are used in office spaces, and **LCE Low Carbon Emissions lamps**, which replace spot lights.

Condition for application

This criterion is applicable to campsites having light bulbs which can be replaced by Class A energy efficient light bulbs (reasons for the impossibility to replace lighting can be dimmer lighting, bulb diameter or lamp size).

***Assessment and verification:** The applicant shall provide a declaration of compliance with both parts of this criterion, together with an indication of the energy efficiency class of the different light bulbs used.*

Compliance and documents to be attached

The applicant shall

- a. replace at least 80% of all non energy saving light bulbs with their Class A equivalent,

where the fittings allow it. (Usually it means that incandescent light bulbs shall be replaced with compact fluorescent lights);

b. replace all non energy saving light bulbs situated where they are likely to be turned on for more than five hours a day (generally those in common rooms, sanitary areas and bathrooms, in halls and kitchens) with their Class A equivalent, where the fittings allow it.

c. provide a written overview indicating the total amount of lamps, operating hours of the light bulbs and amount of energy saving lamps, including an indication of the energy class of the different light bulbs used, and the explanation on the impossibility to substitute certain light bulbs.

Electronic Verification Form: Mandatory Criteria, Row 27-29

[Return to top of criteria](#)

10. Outside heating appliances

The campsite shall use only appliances powered with renewable energy sources to heat outside areas such as smoking corners or external dining areas.

Context

This criterion refers to the energy section and its aim is to reduce the potential energy consumption caused by so called "patio heaters" used to provide radiant heat for outdoor areas. One of these appliances emits around 50kg of carbon dioxide (CO₂) per year.

Condition for application

This criterion is applicable to all campsites with outdoor areas.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, indicating the nature of the energy sources used in case of appliances powered with renewable energy sources.*

Compliance and documents to be attached

The applicant shall

a. provide a declaration that it does not use any outdoor heating appliances powered with other than renewable energy sources

b. provide a description of the outside heating appliance powered with renewable energy sources and the type of source used.

Electronic Verification Form: Mandatory Criteria, Row 30-31

[Return to top of criteria](#)

WATER

11. Water flow from taps and showers

The average water flow of the taps and shower heads excluding bath tub taps, kitchen taps and filling stations shall not exceed 9 litres/minute.

Context

This criterion refers to the water section and its aim is to reduce the potential waste of water from excessive water flow from taps and showers.

Condition for application

This criterion is applicable to all campsites. It does not apply to bath tub taps, kitchen taps and filling stations.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, and relevant documentation, including an explanation on how the campsite fulfils the criterion .*

Compliance and documents to be attached

The applicant shall

- a. make sure that from taps and showers the maximum water flow is 9 litres/minute or less;
- b. empirically measure the number of litres flowing from his taps and shower heads (for example using a flowmeter for this measurement or a small bucket and a watch. The bucket should indicate the number of litres and be filled for 6 seconds. Multiply the measured quantity in the bucket by 10. The result will indicate flow per minute.);
- c. provide an explanation on the measures taken in order to comply with the criterion;
- d. include any relevant documentation, such as the types and water flow of shower heads being used throughout the campsite and the aerators and water flow control units being used in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 32

[Return to top of criteria](#)

12. Waste bins in toilets

Each toilet shall have an appropriate waste bin and the guest shall be invited to use the waste bin instead of the toilet for appropriate waste.

Context

This criterion refers to the water section and its aim is to reduce water consumption from flushing waste in the toilet and avoid that waste, including sanitary towels, cigarettes and waste paper pollutes and blocks toilets and sewage systems.

Condition for application

This criterion is applicable to all campsites.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with appropriate documentation regarding the information to the guests.*

Compliance and documents to be attached

The applicant shall

- a. provide each toilet with a waste bin;
- b. communicate, as most appropriate, the invitation to use the waste bin instead of the toilet for waste disposal;
- c. provide the text of the information given to the guest stating where such information is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 33-34

[Return to top of criteria](#)

13. Urinal flushing

All urinals shall be fitted with either automatic (timed) or manual flushing systems so that there is no continuous flushing.

Context

This criterion refers to the water section and its aim is to save water by avoiding continuous urinal flushing.

Condition for application

This criterion is applicable to campsite structures which have urinals.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with relevant documentation on the urinals installed.*

Compliance and documents to be attached

The applicant shall

- a. ensure that urinals have a manual flush or an automatic flush which enables to avoid continuous urinal flushing;
- b. provide relevant documentation on the urinals installed.

Electronic Verification Form: Mandatory Criteria, Row 35-36

[Return to top of criteria](#)

14. Changing towels and sheets

Guests shall be informed of the environmental policy of the campsite on their arrival. This information

shall explain that sheets and towels in rental accommodation shall be changed on their request, or by default at the frequency established by the environmental policy of the campsite or requested by law and/or national regulations. This applies only to rental accommodation where the service includes the provision of towels and/or sheets.

Context

This criterion refers to the water section but also involves the energy and detergent sections, as well as consumer awareness.

Condition for application

This criterion is applicable to campsite structures which offer accommodation service with towels and sheets.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with relevant documentation showing how the guest is informed and how the campsite respects guests' requests.*

Compliance and documents to be attached

The applicant shall

- a. provide adequate communication to the guest at his arrival, informing him on the environmental policy of the campsite and asking him to contribute to the respect of the environmental policy;
- b. provide relevant documentation showing how the guest is informed and his acceptance.

The communication to the guest shall inform the guest on the environmental policy of the campsite and invite him to contribute to the respect of the environmental policy accepting that the change of towels and sheets is made only on his request.

Electronic Verification Form: Mandatory Criteria, Row 37-38

Note: sheets and towels shall be changed on the request made by guests but with a frequency not higher than quality standards applicable to the rental accommodation within the campsite.

[Return to top of criteria](#)

15. Correct waste water disposal

The campsite shall inform guests and staff on the correct use of the waste water discharge, in order to avoid the disposal of substances that might prevent waste water treatment in accordance with the municipal waste water plan and European regulations. Where a waste water plan from the Municipality is not available, the campsite shall provide a general list of substances that shall not be disposed of with the waste water according to the [Groundwater Directive 2006/118/EC](#), of 12 December 2006, on the protection of groundwater against pollution and deterioration.

Context

This criterion refers to the water and the waste sections and its aim is to avoid harming biodiversity both at sea and on land. Some local administration may conduct studies which identify the best kind of waste water for most efficient functioning of the local treatment plant.

Condition for application

This criterion is applicable to all campsites. For those campsites which are linked to the local sewage treatment plant, it is important to point out that the correct functioning of the plant goes beyond the responsibility of the applicant.

Assessment and verification: The applicant shall provide a declaration of compliance with this criterion and relevant documentation (if available, waste water plan and communication to guests and staff).

Compliance and documents to be attached

The applicant shall

a. provide documentation on the connection to the local sewage treatment plant and the municipality's waste water plan, if available ;

OR

b. provide information on its own waste treatment system,

AND

c. provide adequate documentation regarding the information given to staff on the correct use of the waste water discharge and to the guests about the necessities and obligations of correct disposal of the waste water from their mobile means of lodging stating where such information is situated in the campsite. Such information has to be formulated either taking into account the requests of the municipality's waste water plan, if such is not available, those of the Groundwater Directive 2006/118/EC, in particular the prevention of input into the groundwater of any hazardous substances (belonging to the families or groups of pollutants referred to in points 1 to 6 of Annex VIII to [Directive 2000/60/EC](#), as well as of substances belonging to the families or groups of pollutants referred to in points 7 to 9 of that Annex). Detergents or disinfectants used should be checked if compatible with the list (see Annex VIII at the end of this document).

Electronic Verification Form: Mandatory Criteria, Row 39-40

[Return to top of criteria](#)

DETERGENTS AND DISINFECTANTS

16. Chemical toilet disposal point (CDP)

Where the campsite is connected to a septic tank, the waste from chemical toilets shall be separately or

otherwise correctly collected and treated. Where the site is connected to the public sewage system, a special sink or disposal unit aimed at avoiding spillage shall be sufficient.

Context:

This criterion refers to the detergents and disinfectants section and its main scope is to avoid contamination of soil and ground water by the chemicals contained in the liquids used for the chemical toilets, which harms aquatic life and otherwise pollutes waters.

Condition for application

This criterion is applicable to all campsites, with the specifications indicated in the criterion.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, and relevant documentation including any specific disposal requirement by the local authority together with information on the chemical sink.*

Compliance and documents to be attached

The applicant shall

- a. enquire about legislation regulating the need for special sinks for the disposal of the waste from chemical toilets, and the treatment of such waste,
- b. ensure the provision of a sink or disposal unit for the discharge of chemical toilets which avoids the spilling of waste material during the discharging process,
- c. treat and collect the discharge from the chemical toilets separately, following the local legislation and dispositions, where the campsite disposes of its waste water into a septic tank,
- d. provide technical documentation from the supplier of the chemical sink and, where applicable, documentation regarding the separate treatment and/or collection of the waste.

OR

- e. provide information on its own waste treatment system, as appropriate (see criterion 15)

Electronic Verification Form: Mandatory Criteria, Row 41-44

Note:

Sinks should be made of ceramics or stainless steel, they should be equipped with a flush and an additional water hose for additional flushing.

If there is an on site biological sewage treatment plant or a constructed wetland especially for treatment of waste/grey water, additional separate catchment tanks are needed for chemical toilets. Wastewater with high concentration of chemicals can lead to a total breakdown of the biological sewage treatment plant.

In the event compliance is not met the following is possible:

- A water protective layer has to be placed around the sink (e.g. wall/floor tiles or a drain pan)

which prevents spilled sewage from penetrating subsoil. At the lowest point of the protective layer a ground runoff can be built, which is connected to the public sewage system or to a separate sewage collecting container.

- The raw sewage of the chemical toilets can be collected in a separate container and disposed by an external sub-contractor.

[Return to top of criteria](#)

17. Disinfectants

Disinfectants shall be used only where they are necessary in order to comply with legal hygiene requirements.

Context

This criterion refers to the chemical section and its scope is that of reducing the excessive use of disinfectants which have undesirable effects on biodiversity.

Condition for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with an indication of where and when disinfectants are used.*

Compliance and documents to be attached

The applicant shall

- a. identify the areas where disinfectants are needed according to national or local legislation;
- b. set up procedures to use the needed disinfectants in the appropriate areas in the correct dosage;
- c. provide an indication of where and when the disinfectants are used.

Electronic Verification Form: Mandatory Criteria, Row 45

[Return to top of criteria](#)

WASTE

18. Waste separation by guests

Guests shall be informed how and where they can separate waste according to the best local or national systems within the areas to which the campsite belongs. Adequate containers for waste separation shall be as easily reachable as general waste bins.

Context

This criterion refers to waste management and its main scopes are to promote separate

collection of waste at source, so as to allow recycling and appropriate disposal.

Conditions for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with relevant documentation on the information to guests and explaining where containers are located on the campsite.*

Compliance and documents to be attached

The guest shall be put in the condition to easily separate his waste, thank to appropriate containers. The bins shall cover the different categories of waste (glass, paper, plastic, etc) according to the facilities offered by the local authority.

The applicant shall

- a. provide adequate receptacles to the categories of waste handled by local authority and position them appropriately where waste is likely to arise. including signage on the bins. These bins should be also fire resistant. The size of the waste separation bins should be relevant to the type and the amount of waste. The waste bins should not block any emergency exits;
- b. communicate to the guest as appropriate on the waste separation opportunities;
- c. provide details of the receptacles, their position on the campsite and a copy of the signs/ information to the guests stating where such information is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 46-47

[Return to top of criteria](#)

19. Waste separation

Waste shall be separated into the categories that can be handled separately by the local or national waste management facilities, with particular care regarding hazardous waste, which shall separated, collected and disposed of as listed in Commission Decision 2000/532/EC of 3 May 2000 replacing Decision 94/3/EC establishing a list of wastes pursuant to Article 1(a) of Council Directive 75/442/EEC on waste and Council Decision 94/904/EC establishing a list of hazardous waste, pursuant to Article 1(4) of Council Directive 91/689/EEC on hazardous waste, and its subsequent amendments, and appropriate disposal shall be sought. This list includes toners, inks, refrigerating and electrical equipment, batteries, energy saving light bulbs, pharmaceuticals, fats/oils, etc. and electrical appliances as specified on Directive 2002/96/EC of 27 January 2003 on waste electrical and electronic equipment (WEEE)¹⁵ and Directive 2002/95/EC of 27 January 2003, on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS).

If the local administration does not offer separate waste collection and/or disposal, the campsite shall write to them expressing their willingness to separate waste, and expressing their concern about the lack

of separate collection and/or disposal. If the local authority does not provide disposal of hazardous waste, the applicant shall, every year, provide a declaration from the local authority that there is no hazardous waste disposal system in place.

The request to local authorities to provide separate waste collection and/or disposal shall be made yearly.

Context

This criterion refers to the waste section and its aim is to ensure proper disposal of all, but in particular of hazardous waste, which should be disposed of according to special procedures, as identified by each Member State.

Conditions for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with an indication of the different categories of waste accepted by the local authorities, and/or relevant contracts with private agencies. Where appropriate the applicant shall provide every year the corresponding declaration to the local authority.*

Compliance and documents to be attached

The applicant shall

- a. enquire from the local authority whether they have waste separation facilities and which are the kinds of waste which they separate;
- b. list the kinds of waste separated by local authorities;
- c. show the procedures set up for separation of waste in the categories allowed by the local authority with the help of a waste management map. This map should indicate all the various locations of the bins throughout the campsite;
- d. identify the types of waste present in the campsite which are hazardous, according to Commission Decision 2000/532/EC establishing a list of wastes pursuant to Article 1(a) of Council Directive 75/442/EEC on waste and Council Decision 94/904/EC establishing a list of hazardous waste, pursuant to Article 1(4) of Council Directive 91/689/EEC on hazardous waste, and its subsequent amendments, including toners, inks, refrigerating and electrical equipment, batteries, energy saving light bulbs, pharmaceuticals, fats/oils, etc. and electrical appliances as specified on Directive 2002/96/EC on waste electrical and electronic equipment (WEEE)¹⁵ and Directive 2002/95/EC on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS)
- e. designate a site for disposal and collection of all the various types of hazardous waste, ensuring that the hazardous waste is stored in a safe and secure indoor / outdoor location. All hazardous waste disposal containers need to be clearly labelled. This includes information for guests where to dispose of their own hazardous waste such as batteries and fats/oils.
- f. ensure their proper disposal outside of his grounds (for example return the hazardous waste to the provider or bring them to public or private waste disposal sites);
- g. provide a list of the hazardous waste produced and an indication on how they are handled, separated, collected and disposed of;
- h. include copies of relevant contracts with third parties.

Electronic Verification Form: Mandatory Criteria, Row 48-50

Note for a definition of waste and hazardous waste see terms and definitions hazardous waste, see Annex III Directive 91/689/EEC

PROPERTIES OF WASTES WHICH RENDER THEM HAZARDOUS, as shown on the packaging:
H1 Explosive, H2 Oxidizing, H3-A Highly flammable, H3-B Flammable, H4 Irritant, H5 Harmful, H6 Toxic, H7 Carcinogenic, H8 Corrosive, H9 Infectious, H10 Teratogenic, H11 Mutagenic, H12 Substances and preparations which release toxic or very toxic gases in contact with water, air or an acid, H13 Substances and preparations capable by any means, after disposal, of yielding another substance, e.g. a leachate, which possesses any of the characteristics listed above, H14 Ecotoxic.

[Return to top of criteria](#)

20. Disposable products

Unless required by law, disposable toiletries (not refillable) such as shampoo and soap, and other products (not reusable), such as shower caps, brushes, nail files, etc. shall not be used. Where such disposable products are requested by law the applicant shall offer to guests both solutions and encourage them with appropriate communication to use the non-disposable products.

Disposable drinking systems (cups and glasses), plates and cutlery shall only be used if they made out of renewable raw materials and are biodegradable and compostable according to EN 13432.

Context

This criterion applies to the waste section and its aim is that to avoid unnecessary production of waste.

Condition for application

This criterion is applicable to all campsites providing the guest with toiletries and serving food and/or drink. Please note that dispensers are not considered disposable products.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with relevant documentation explaining how the criterion is fulfilled (including any legislation requiring use of disposable products), and consistent documentation regarding the refillable products and/or on the information conveyed to the guests, concerning the encouragement to use non-disposable products (if applicable)*

For demonstrating that disposable drinking systems (cups and glasses), plates and cutlery meet this criteria evidence of compliance with EN 13432 must be provided.

Compliance and documents to be attached

The applicant shall

a. enquire if there is legislation requiring the campsite to provide the guest with disposable

toiletries or other single-use products;

b. declare whether it provides disposable cups, plates and cutlery and supply proof of compliance with EN 13432 of the products;

c. identify alternatives, accordingly to legislation requirements, to provide the guest with non-disposable toiletries, the preferable solution are dispensers;

d. provide an indication of any legislation in act and/or the alternatives provided for point a);

e. provide a declaration of the adequate disposal for the disposable renewable, biodegradable and compostable products.

Electronic Verification Form: Mandatory Criteria, Row 51-54

Note: the items to which the criterion refers are those offered within the structure for internal use, not for outside sale in the shops.

[Return to top of criteria](#)

21. Breakfast Packaging

Except where required by law, no single dose packages shall be used for breakfast or other food service, with the exception of dairy fat spreads (such as butter, margarine and soft cheese), chocolate and peanut butter spreads, and diet or diabetic jams and preserves.

Context This criterion refers to the waste management section and its aim is to reduce package waste from single breakfast/food packaging.

Condition for application

This criterion is applicable to all campsites serving food and/or drink to guests.

Assessment and verification: *The applicant shall provide a declaration of compliance with the criterion and a detailed explanation on how the accommodation fulfils, together with a list of single dose products used and the legislation requiring this.*

Compliance and documents to be attached

The applicant shall

a. enquire of any law requiring single dosage packages;

b. substitute single dose packaging with some other solution, where not explicitly required by law;

c. provide a detailed explanation on how the campsite fulfils the criterion;

d. provide any other appropriate documentation.

Electronic Verification Form: Mandatory Criteria, Row 55

Note:

Some alternative ways of serving and offering food without compromising on health and safety standards

- Protective Plexiglas shield over open food
- Dispensers for liquid spreads such as honey and certain types of jam and jelly
- Covered containers for spreads, yoghurt and other dairy products
- Cooled containers with transparent cover for fresh products
- Staff serving certain products on demand from the kitchen instead of keeping it on the table or the buffet

[Return to top of criteria](#)

OTHER SERVICES

22. No smoking in common areas

A no smoking section shall be available in all indoor common areas.

Context This criterion refers to the "other services" section and its aim is to ensure the quality of air inside the campsite indoor common areas and the safety of the guests.

Condition for application The criterion is applicable to all campsites.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion.*

Compliance and documents to be attached

The applicant shall

- a. ensure that a no smoking section is available in indoor common areas;
- b. provide a written description of the non-smoking area(s).

Electronic Verification Form: Mandatory Criteria, Row 56

[Return to top of criteria](#)

23. Public transportation

Information shall be made easily available to the guests and staff on how to use public transportation to and from the campsite through its main means of communication. Where no appropriate public transport exists, information on other environmentally preferable means of transport shall also be provided.

Context This criterion refers to the "other services" section and its aim is to reduce private transport by the guest.

Condition for application The criterion is applicable to all campsites.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with copies of the information material available.*

Compliance and documents to be attached

This criterion requires of the campsite manager the effort to look for information on public transportation regarding the campsite and other relevant places of interest.

The applicant shall

- a. provide information on public transportation (trains and buses) or collective private transportation (private buses) leading to the campsite from the main nearby destinations;
- b. provide information to the guest on public transportation or collective private transportation in the area;
- c. invite the guest, when possible, to choose collective transportation;
- d. provide copies of the information material available, stating where such information is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 57-58

[Return to top of criteria](#)

GENERAL MANAGEMENT

Applicants with an Environmental Management System registered under the EMAS Regulation or certified according to ISO 14001 automatically fulfil the following general management criteria with exception of criteria 28, 29 and 30 (data collection and information). In such cases, the means of verification of compliance with those criteria is the EMAS registration or ISO 14001 certification.

Please note that Criterion n.30 on information appearing on the EU eco-label must be complied with even if the campsite applies other Environmental Management Systems.

Please note that in case of an environmental management system (EMAS or ISO 14001), it is highly advised that compliance with the EU eco-label criteria is stated as one of the environmental objectives

24. Maintenance and servicing of boilers and air conditioning systems

Maintenance and servicing of boilers and air conditioning systems shall be carried out at least yearly, or more often if so required by law or need, by appropriately qualified professionals, following CEI and national standards where these apply, or according to the manufacturer's instructions.

For air conditioning systems the maintenance (check for leakage and repair) has to be carried out according to Regulation 842/2006/EC of 17 May, on certain fluorinated greenhouse gases, in line with the amount of F (fluorinated greenhouse) gas contained in the application, as follows:

- At least once every twelve months for applications containing 3 kg or more of F gases (this shall not

apply to equipment with hermetically sealed systems, which are labelled as such and contain less than 6 kg of fluorinated greenhouse gases)

- At least once every six months for applications containing 30 kg or more of F gases
- At least once every three months for applications containing 300 kg or more of F gases

Context

This criterion refers to the management section and its aim is to ensure efficiency of the boilers and air conditioning systems through proper maintenance.

Conditions for application

This criterion is applicable to all campsites having a boiler and/or an air conditioning system.

***Assessment and verification:** The applicant shall provide a declaration of compliance with all parts of this criterion, together with a description of the boilers and their maintenance programme, and details of the persons/companies carrying out the maintenance, and what is checked during the maintenance. For air conditioning systems containing 3kg or more of F gases the applicant shall provide records on the quantity and type of F gases installed, any quantities added and the quantity recovered during maintenance, servicing and final disposal as well as the identification of the company or technician who performed the servicing or maintenance, as well as the dates and results of the leakage checks and relevant information specifically identifying the separate stationary equipment with more than 30kg of F gases.*

Compliance and documents to be attached

The applicant shall

- conduct a maintenance check of his boilers and air conditioning systems, according to legal prescriptions, by qualified personnel, at least yearly or more often according to law or need ;
- conduct efficiency tests according to the prescriptions of the type of boiler and ensure himself that they are within legal limits;
- provide records on the quantity and type of F gases installed and quantities added and/or recovered during maintenance, servicing and disposal for air conditioning systems with 3kg or more of F gases.
- provide dates and results of leakage checks and relevant information according to Regulation 842/2006/EC of 17 May, on certain fluorinated greenhouse gases regarding separate stationary air conditioning equipment with more than 30 kg of F gases.
- provide a description of the boilers and air conditioning systems and their maintenance programme including details of the persons/companies carrying out the maintenance and what is checked during the maintenance.

Electronic Verification Form: Mandatory Criteria, Row 59-60

[Return to top of criteria](#)

25. Policy setting and environmental program

The management shall have an environmental policy and shall draw up a simple environmental policy statement and a precise action program to ensure the application of the environmental policy.

The action program shall identify targets on environmental performance regarding energy, water, chemicals and waste, which shall be set every two years, taking into consideration the optional criteria and the data collected where available. It shall identify the person who will act as the environmental manager of the campsite and who is in charge of taking the necessary actions and reaching the targets. The environmental policy shall be available for consultation by the public. Comments and feedback from guests collected by means of a questionnaire or check list shall be taken into account.

Context

This criterion refers to the management section and its aim is to explicit the environmental commitment of the campsite manager and organise his actions for a most efficient environmentally friendly position.

Condition for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with a copy of the environmental policy or the policy statement and action program, and procedures for taking into account input from guests.*

Compliance and documents to be attached

The applicant shall

- a. draw up an environmental policy statement;
- b. draw up an action program;
- c. provide a copy of the above documents and procedures for evaluating and taking into account input from guests.

Electronic Verification Form: Mandatory Criteria, Row 61-65

Suggestions:

An **environmental policy** establishes the overall direction and commitment of the organization and provides a framework for action for the development of specific environmental objectives and targets. When creating the policy, there are a number of important factors which need to be considered. It is necessary to ensure that the policy relates to both the individual needs and ideas of the company and connects with recognized Best practice Environmental Sustainability standard. It is a statement created for a wide audience, thus the wording and style of the policy requires careful consideration and should be drafted in a clear and precise one page document.

The environmental **action program** should focus on actions designed to reflect continuous improvement within the organization and may focus on energy, water, chemicals, waste and awareness raising.

Possible targets of the action program should possibly include such **section B (optional) criteria** which have not already been fulfilled. The program should contain the following details:

- Clear descriptions of the actions
- Person/department responsible for carrying out the action,
- Budget
- Personnel resources / awareness raising and training
- Deadline for completion

The environmental programme has to focus on future targets and has to be updated annually.

Procedures for collecting input from guests

There are several options:

- Questionnaires: Guests are familiar with questionnaires and are usually willing to complete the forms.
- Add environmental related questions to an existing questionnaire.
- Guests should be encouraged to verbally express feedback.
- A guest book.

Evaluating feedback

There must be a system in place to evaluate guest feed back and act on conclusions. Recommendations should be added into the environmental action plan.

[Return to top of criteria](#)

26. Staff training

The campsite shall provide information and training to the staff, including written procedures or manuals, to ensure the application of environmental measures and to raise awareness of environmentally responsible behaviour. In particular, the following issues shall be taken into consideration:

Concerning energy saving:

– Staff shall be trained on how to save energy.

Concerning water saving:

– Staff shall be trained to check every day for visible leaks and to take appropriate action as necessary.

– Flowers and outside areas shall normally be watered before high sun or after sunset, where regional or climatic conditions make it appropriate.

– Staff shall be informed of the campsite's policy regarding criterion 14 about towel change and be instructed how to comply with it.

Concerning chemical substances:

– Staff shall be trained not to exceed the recommended amount of detergent and disinfectant indicated on the packaging.

Concerning waste:

- Staff shall be trained to collect, separate and bring to appropriate disposal waste into the categories that can be handled separately by the local or national waste management facilities as defined by criterion 19.
 - Staff shall be trained to collect, separate and bring to appropriate disposal hazardous waste as listed in Commission Decision 2000/532/EC of 3 May 2000 and defined by criterion 19.
- Adequate training shall be provided to all new staff within four weeks of starting employment and for all staff at least once a year.

Context

This criterion refers to the general management section and its aim is to ensure that staff is trained to carry out the criteria. Their understanding is essential and key for a successful environmental management program. Their total support and motivation is needed in order to implement all the defined environmental actions .

The lessons shall tackle all the aspects of the criteria as listed below. Written procedures or manuals shall be such as to ensure that staff, according to its role, has information available within the campsite in at least the topics listed below.

Topics for training required per staff position.

Legend:

general management: staff responsible for the coordination and supply management;
maintenance: staff responsible for the servicing and maintenance of equipment;
housekeeping: staff responsible for cleaning and waste disposal;
administration: staff responsible for front and back office activities

ENERGY

General Management and Maintenance staff

- Electricity: free electricity market and renewable resources. Directive 2001/77/EC and local legislation on the topic;
- Servicing, legal maintenance requirements for different types of HVAC, including the one which belongs to the campsite;

Maintenance staff

- Heating, ventilation and air conditioning (HVAC); functioning, CO₂, CO, NO_x production; environmental impacts deriving from poor servicing and maintenance; efficiency: elements which influence efficiency, most efficient types of HVAC;
- Insulation: wall and window insulation: different types of windows and insulation and

consequences of good/poor insulation;

- Thermoregulation: most efficient levels of base temperature, heat dispersion with respect to outside walls and insulation;
- Energy efficient light bulbs;
- Energy efficient equipment. Energy Class, energy star;
- Energy production from renewable sources: solar heat, photovoltaic generation etc.

WATER

All staff

- Water: the water cycle, the most recent causes for water shortage and its implications;

Maintenance staff

- Waste water treatment . influence of oils and detergent foam in waste water plants:

Maintenance and housekeeping staff

- Leaks: the importance of fixing them immediately (how many litres to one-drop leak for one day);
- Effects and types of flow reducers;
- Watering of flowers and outside areas before high sun or after sunset, where regional or climatic conditions make it appropriate.

Housekeeping and administration staff (reception and marketing)

- Respecting the willingness of the guests to keep sheets and towels;
- Different ways to save water in the bathroom;

Housekeeping staff

- Ways to save water during cleaning activities;

Maintenance staff

- Rainwater use and recycling of water;

CHEMICAL SUBSTANCES

Housekeeping staff

- Detergents and disinfectants: consequences on the environment;
- Best types of detergents and practices for minimal use;

WASTE MANAGEMENT

All staff

- Waste reduction and separation (in the office, the kitchen, other as appropriate);
- Recycling of different types of waste;
- Collection, separation and appropriate disposal of hazardous waste as listed in Commission Decision 2000/532/EC of 3 May 2000 and defined by criterion 19

MANAGEMENT

General management and administration staff

- Management;
- EU eco-label criteria and scheme, environmental certification;
- Communication to the guests on the environmental commitment of the campsite;
- Follow up on consumer questionnaire on environmental services.

From each training session, material shall be available for each topic in the campsite for consultation.

Condition for application

This criterion is applicable to all campsites.

Assessment and verification: The applicant shall provide a declaration of compliance with this criterion, together with details of the training programme, its content, and an indication of which staff have received what training and when. The applicant shall provide also copies of procedures and staff communication concerning all mentioned issues.

Compliance and documents to be attached

The applicant shall

a. organise a training session on the above stated issues for its members of staff;

OR

b. send his lead and staff to a training session organised collectively specifically for campsite/

accommodation managers/staff;

OR

- c. send the main staff representative per sector to a collective training and have him convey the knowledge and documentation to the other members of staff;
- d. in any of the situations, provide details of the training programme its content, and an indication of which staff have received what training and when and how the information is conveyed to non attending staff, if applicable.

Electronic Verification Form: Mandatory Criteria, Row 66

Note: if the campsite is too small to organise training sessions for itself individually, requests should be made to one's trade association in order to organise collective training sessions, together with other similar structures.

Manuals are intended to be simple, according to the size and complexity of tasks, in any case they are intended to be within economical reach of micro-enterprises.

[Return to top of criteria](#)

27. Information to guests

The campsite shall provide information to the guests, including conference participants, on its environmental policy, including safety and fire safety aspects, inviting them to contribute to its implementation. The information conveyed to the guests shall refer to the actions taken on behalf of its environmental policy and provide information about the EU Eco-label. This information shall be actively given to the guests at the reception, together with a questionnaire covering their views about the environmental aspects of the campsite. Notices inviting guests to support the environmental objectives shall be visible to the guests, especially in the common areas and the rental accommodation.

Specific actions for the different areas shall be:

Concerning energy:

- Where applicable, according to criteria nr. 7 and 8, inform guests on switching off heating/air conditioning and lights.

Concerning water and waste water:

- In the sanitary areas and bathrooms there shall be adequate information to the guest on how to help the campsite to save water.
- The guest shall be invited to inform the staff of any leak.
- In the toilets, signs shall request guests to dispose of their waste into the waste bins instead of the toilets.
- Guests shall be informed about the necessities and obligations of correct disposal of the waste water from their mobile means of lodging.

Concerning waste:

- The guest shall be informed about the waste reduction policy of the campsite and the use of quality product alternatives to disposable and single portion products, and should be encouraged to use non-

disposable products, in case where any legislation requires the use of disposable products
– They shall be informed how and where they can separate waste according to local or national systems within the areas belonging to the campsite and where to dispose of their hazardous substances.

Context

This criterion refers to the general management section and has the aim of making the guests aware of the EU eco-label and the campsite's environmental commitment, with the intent to stimulate their contribution in reducing the environmental impact of their presence. The presence of a questionnaire is particularly significant due to the higher environmental awareness of campsite guests than guests of other accommodation structures.

Condition for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with copies of the information signs and notices provided for the guests, and indicate its procedures for distributing and collecting the information and the questionnaire, and for taking the feedback into account.*

Compliance and documents to be attached

The applicant shall

- a. produce an information notice regarding its environmental commitment towards the EU eco-label and the main measures taken toward environmental respect;
- b. include in the notice friendly invitation to the guest to help the campsite reach its environmental goals, which have to include the following aspects in the different areas of:

=> Energy

-Where applicable, according to criteria nr. 7 and 8, inform guests on switching off heating/air conditioning and lights.

=> Water and waste water:

- Adequate information in the sanitary areas and bathrooms to the guest on how to help the campsite to save water.

- Invitation to the guest to inform the staff of any leak.

- In the toilets, signs shall request guests to dispose of their waste into the waste bins instead of the toilets.

- Information about the necessities and obligations of correct disposal of the waste water from mobile means of lodging.

=> Waste:

- Information about the waste reduction policy of the campsite and the use of quality product alternatives to disposable and single portion products, and kind request to use non-disposable products, in case where any legislation requires the use of disposable products

- Information on how and where they can separate waste according to local or national systems within the areas belonging to the campsite and where to dispose of their hazardous substances.

- c. set up a questionnaire on the environmental aspects of the campsite;
- d. provide copies of the information notices and questionnaire provided for the guests, stating where such information is situated in the campsite.

Electronic Verification Form: Mandatory Criteria, Row 67-68

[Return to top of criteria](#)

28. Energy and water consumption data

The campsite shall have procedures for collecting and monitoring data on overall energy consumption (kWh), electricity and other energy sources consumption (kWh), and water consumption (litres). Data shall be collected where possible, monthly or at least yearly, for the period when the campsite is open, and shall also be expressed as consumption per overnight stay and per m² of indoor area. The campsite shall report the results yearly to the Competent Body that assessed the application.

Context

This criterion refers to the general management section and its aim is to enable the campsite manager to monitor his consumptions.

Condition of application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with a description of the procedures. On application, the applicant shall provide the data for the above-listed consumptions for at least the previous six months (if available), and thereafter shall provide this data every year for the previous year or opening period. For the residential area (long term stay), the number of overnight stays can be based on an estimation by the campsite owner.*

Compliance and documents to be attached

The applicant shall

- a. report the kind of source of electricity and the number of kWh of electricity used in the "electricity" consumption table of the electronic verification form (last sheet)
- b. report the kind of source of energy used for heating rooms and sanitary water and other uses and the number of kWh used in the "heating" consumption table of the electronic verification form
- c. report the water consumption in the "water" consumption table of the electronic verification form
- c. calculate with the help of the consumption tables the yearly figure of the above measurements per overnight stay and m² of indoor area, including the estimate of long term stay guests;
- d. provide a description of the procedures for collecting the data in the notes to the consumption tables (if the data are collected monthly from energy/water meters or from bills,

and with which frequency).

e. report the results yearly to the Competent Body that assessed the application.

Electronic Verification Form: Mandatory Criteria, Row 69-71

[Return to top of criteria](#)

29. Other data collection

The campsite shall have procedures for collecting and monitoring data on consumption of chemicals expressed in kg and/or litres specifying if the product is concentrated or not and the quantity of waste produced (litres and/or kg of unsorted waste).

Data shall be collected where possible, monthly or at least yearly, and shall also be expressed as consumption or production per overnight stay and per m² of indoor area.

The campsite shall report the results yearly to the Competent Body that assessed the application.

Context

This criterion refers to the general management section and its aim is to enable the campsite manager to monitor his consumptions.

Condition of application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with a description of the procedures. On application, the applicant shall provide the data for the above-listed consumptions for at least the previous six months (if available), and thereafter shall provide this data every year for the previous year or opening period. The applicant shall specify the services offered and if laundry is cleaned on the premises.*

Compliance and documents to be attached

The applicant shall

- a. report the quantity of detergents and disinfectants used in kg in the "chemical substances" consumption table of the electronic verification form, specifying in the note to the table whether the detergent is concentrated or not or if other measurements have been used;
- b. calculate with the help of the consumption tables at least the yearly figure of the above measurements per overnight stay and m² of indoor area;
- c. measure (in kg or liters) the amount of unsorted waste and report the values in the waste consumption table in the electronic verification form;
- d. calculate with the help of the consumption tables at least the yearly figure of the above measurements per overnight stay and m² of indoor area;
- e. specify the services offered and whether laundry service is offered;
- f. provide a description of the procedures used to collect the data (frequency and measuring method);

g. report the results yearly to the Competent Body that assessed the application.

Electronic Verification Form: Mandatory Criteria, Row 72-74

Note:

Chemical substances:

Additional information about grams of dry substances can be found on the label of containers, or manufacturers may provide product information sheets. In the event that no information is available, it is useful to document the overall quantities in litres or kg. The amount of chemicals consumed can be compared with invoices.

Waste:

Quantifying data can be collected in the following way:

- Per kg or litres as per the request of the waste service provider
- If a flat rate is being paid to the waste service provider the campsites needs to develop its own measurement system (counting containers)

[Return to top of criteria](#)

30. Information appearing on the Eco-label

Box 2 of the eco-label shall contain the following text:

– This campsite is actively taking measures to use renewable energy sources, save energy and water, to reduce waste, to improve the local environment.

Context

This criterion refers to the general management section and its aim is to communicate the aims of the EU eco-label, as required by the regulation governing the EU eco-label.

Condition for application

This criterion is applicable to all campsites.

***Assessment and verification:** The applicant shall provide a sample of how they will use the label, together with a declaration of compliance with this criterion.*

Compliance and documents to be attached

The applicant shall

- a. make one or more supports for the EU eco-label message according to the contents requested;
- b. provide a sample of the supports.

Electronic Verification Form: Mandatory Criteria, Row 75

Note:

THIS CRITERION MUST BE COMPLIED WITH EVEN BY THOSE campsites HAVING AN EMS (EMAS or ISO 14001) IN PLACE.

The logo will be provided to the campsite in an electronic and easily printable form.

The logo can be used in the following way:

- Brochures
- Letters
- Envelopes
- Campsite and other related websites
- Booking confirmation
- Invoices

[*Return to top of criteria*](#)

[*Return to Index*](#)

SECTION B

OPTIONAL CRITERIA

REFERRED TO IN ARTICLE 2, FIRST AND SECOND PARAGRAPH

These criteria are organised in sections similar to the criteria in the previous part. They cover a wide range of possibilities in order to allow the applicant to find the requirements which best fit his possibilities and his environmental policy, and is applicable in his case.

Each of the criteria set out in this Section has been attributed a value expressed in points or fractions of points. In order to qualify for award of the Eco-label, campsites must score a minimum of 20 points (the score for each criterion is indicated in the title of each criterion).

If the campsite provides sheltered accommodation similar to tourist accommodation **(bungalows, hotels, other fixed lodging structures) it needs to fulfil criteria in order to reach 24 points.**

The total score required shall be increased by 3 points for each of the following additional services which are offered that are under the management or ownership of the campsite:

- food services (including breakfast)
- leisure/fitness activities, which include saunas, swimming pools and all other such facilities which are within the campsite grounds. If the leisure/fitness activities consist in a wellness centre, the score required shall be increased by 5 points, instead of 3.
- Green areas which are not part of the campsite structure, such as parks, woods and gardens which are

open to guests.

ENERGY -B

31. Generation of electricity through renewable energy sources (up to 4 points)

The campsite shall have a photovoltaic (solar panel) or local hydroelectric system, geothermal, biomass or wind power electricity generation that supplies or will supply at least 20 % of the overall electricity consumption per year. (2 points).

The campsite shall introduce into the grid a net amount of electrical energy produced from renewable energy sources (2 points).

Context

This criterion refers to the energy section and its aim is to promote the auto-production of electricity from renewable resources and reduce production of greenhouse gas CO₂.

Assessment and verification: The applicant shall provide a declaration of compliance with this criterion, together with documentation on the photovoltaic, hydroelectric, geothermal, biomass or wind power system and data on both its potential and actual output and documentation regarding the electricity flows from and to the grid as proof of any net contribution or electricity from renewable energy sources to the grid.

Compliance and documents to be attached

The applicant shall

- a. describe the photovoltaic, local hydroelectric, geothermal, biomass or wind-power electricity generating systems and declare the potential production;
- b. declare the effective production of electricity from RES;
- c. provide documentation regarding the electricity flows from and to the grid

Electronic Verification Form: Optional Criteria, Row 4-5

[Return to top of criteria](#)

32. Energy from renewable energy sources (up to 2 points)

At least 70 % of the total energy used to heat or cool either the rooms or to heat sanitary water shall come from renewable energy sources. (1.5 points, 2 points for 100% of the campsite's energy used for that purpose coming from renewable energy sources).

Context

This criterion refers to the energy section and its aim is to promote the auto-production of energy from renewable resources and reduce production of greenhouse gas CO₂.

Assessment and verification: The applicant shall provide a declaration of compliance with this

criterion, together with data on the energy consumed in heating rooms and hot water and documentation showing that at least 70 % or 100% of this energy comes from renewable energy sources.

Compliance and documents to be attached

The applicant shall

- a. describe its system which uses renewable resources to heat and/or cool inside areas and sanitary water (such as biogas, biomass, pellets, heat pumps, geothermal energy, solar heating);
- b. report the % of heat and cool production which it provides with respect to the total yearly energy consumption for heating and cooling inside areas and heating and sanitary water (as required also by criterion n. 28 on measurement of energy consumption);

Electronic Verification Form: Optional Criteria, Row 6-7

[Return to top of criteria](#)

33. Boiler energy efficiency (1.5 points)

The campsite shall have a four-star boiler as defined by Directive 92/42/EC

Context

The criterion refers to the energy section and its aim is to reduce the use of fossil fuels by a high efficiency of the boiler.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with adequate documentation.*

Compliance and documents to be attached

Four star boilers have efficiencies up to 95%. This information is usually contained in the technical booklet of the boiler, otherwise, the manufacturer or the retailer shall certify the number of stars of the boiler. This criterion can be fulfilled even by boilers which are excluded by Directive 92/42/EEC but have equivalent efficiency to the four star of the Directive.

The applicant shall

- a. ask the manufacturer or provider for a declaration regarding the number of stars of the boiler;
- OR
- b. provide a copy of the technical booklet of the boiler reporting the number of stars of the boiler

Electronic Verification Form: Optional Criteria, Row 8

[Return to top of criteria](#)

34. Boiler NO_x emissions (1.5 points)

The boiler shall be class 5 of the EN 297 prA3 norm regulating NO_x emissions, and shall emit less than 60 mg NO_x/kWh (gas condensing boilers) or 70 mg NO_x/kWh (non condensing gas boilers up to nominal output of 120 kW).

Context

This criterion refers to the energy section and its aim is to reduce NO_x emissions, responsible for greenhouse effect into the atmosphere, acidification and creation of photochemical ozone.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with a report or technical specifications from the professional technicians responsible for the sale and/or maintenance of the boiler.*

Compliance and documents to be attached

The applicant shall

a. ask the manufacturer or retailer for a declaration regarding the number of stars of the boiler and that the boiler does not emit more than 60 mg NO_x/kWh (gas condensing boilers) or 70 mg NO_x /kWh (non condensing gas boilers up to nominal output of 120 kW);

OR

b. provide a copy of the information on the number of stars in the technical booklet of the boiler;

c. keep data from maintenance tests in order to show that they were performed in time within the duration of the eco-label award;

Electronic Verification Form: Optional Criteria, Row 9-10

[Return to top of criteria](#)

35. District heating (1.5 points)

The heating of the campsite shall be provided by efficient district heating, for the purposes of the eco-label defined as follows.

Generation of heat is done either in high efficiency cogeneration units as defined by Directive 2004/8/EC and the related Commission Decisions, or in heat only boilers with an efficiency that matches or surpasses the applicable reference value established by Commission Decision 2007/74/EC, of 21 December, establishing harmonised efficiency reference values for separate production of electricity and heat in application of Directive 2004/8/EC18;

and in addition:

-The pipes in the district heating distribution network shall meet the requirements as laid out in the

applicable CEN standards for such pipes.

Context

This criterion refers to the energy section and its aim is to reduce pollution from heating of many single accommodation as compared to heating produced from a central plant which is more efficient and better monitored, the district heating plant.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with documentation showing connection to the district heating.*

Compliance and documents to be attached

The applicant shall

a. ask its energy provider a declaration of the presence of a district heating system to which the campsite is attached;

OR

b. provide the necessary documentation showing the linkage to the district heating system and the compatibility of the distribution pipes with the applicable CEN standards;

c. provide technical documentation regarding the efficiency of the district heating system

Note: European standard for pipes in district heating distribution networks, published by the CEN:

EN 253 Bounded pipe system for underground hot water networks

EN 448 Pre-insulated fittings

EN 488 Pre-insulated valves

EN 489 Joints assembly

Steel pipes longitudinally welded according to DIN 1626:1984 or seamless according to DIN 1629:1984.

Steel material St 37,0 or similar according to DIN 17100

Electronic Verification Form: Optional Criteria, Row 11

[Return to top of criteria](#)

36. Combined heat and power - cogeneration (1.5 points)

Electricity and heating of the sanitary facilities, common areas and rental accommodation shall be provided by a high efficiency cogeneration unit according to Directive 2004/8/EC. If the campsite service has such cogeneration unit on site its output of heat and electricity shall supply at least 70 % of the total heat and electricity consumption on site. The supply shall be calculated in accordance with the methodology provided by Directive [2004/8/EC](#).

Context

This criterion refers to the energy section and its aim is to favour the plants which generate

heat and power (heat and electricity) together, which increases the efficiency of the plant.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with documentation on the combined heat and power plant.*

Compliance and documents to be attached

If the heat and power plant is not of the campsite,

the applicant shall

- a. ask its energy provider a declaration of the presence of a combined heat and power plant from which the campsite receives its heat and electricity and the methodology of the plant;
- b. indicate the amount of energy received from the heat and power plant, showing that it covers the entire yearly energy consumption;

If the heat and power plant is of the campsite

the applicant shall

- a. declare the presence of the combined heat and power plant for the campsite;
- b. indicate the amount of energy received from the plant, showing that it covers 70% of the total heat and energy consumption and the methodology used by the plant, calculating the supply as specified in Annex II of [Directive 2004//EC](#);
- c. indicate the provider and type of energy source of the remaining 30%;

Electronic Verification Form: Optional Criteria, Row 12

[Return to top of criteria](#)

37. Heat pump (up to 2 points)

The campsite shall have a heat pump providing heat and/or air conditioning (1.5 points). The campsite has a heat pump with the EU Eco-label or another ISO type I Eco-label (2 points)

Context

This criterion refers to the energy section and favours the use of a heat pump due to its high efficiency in heating or cooling.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with documentation on the heat pump.*

Compliance and documents to be attached

The applicant shall

- a. provide a copy of the technical booklet with the operating conditions of the heat pump;
- OR

- b. provide a technical report from qualified personnel reporting the operating conditions of the heat pump;
- OR
- c. provide documentation about the EU Eco-label or ISO type I certification of the heat pump;

Electronic Verification Form: Optional Criteria, Row 13-14

[Return to top of criteria](#)

38. Heat recovery (up to 1.5 points)

The campsite shall have a heat recovery system for 1 (1 point) or 2 (1.5 points) of the following categories: refrigeration systems, ventilators, washing machines, dishwashers, swimming pool(s), sanitary waste water.

Context

This criterion refers to the energy section and its aim is to favour saving energy from the recovery of the heat from certain facilities present in the campsite.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with documentation on the heat recovery systems.*

Compliance and documents to be attached

The applicant shall

- a. provide a copy of the project of the heat recovery systems in place in the campsite;
- OR
- b. provide a description from the technician of the heat recovery measures adopted;

Electronic Verification Form: Optional Criteria, Row 15

[Return to top of criteria](#)

39. Thermoregulation (1.5 points)

The temperature in every common area and rental accommodation shall be individually regulated.

Context

This criterion refers to the energy section and favours the possibility to regulate the temperature individually according to need which saves energy.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with documentation on the thermoregulatory systems.*

Compliance and documents to be attached

The applicant shall

- a. provide a description from the technician of the thermoregulation system;
- OR
- b. provide a document showing evidence of the technology used to operate the thermoregulation;

Electronic Verification Form: Optional Criteria, Row 16

[Return to top of criteria](#)

40. Energy performance audits for buildings (1.5 points)

The campsite service shall be subject to a biannual energy performance audit by an independent expert and implement at least two recommendations on improving the energy performance resulting from the audit.

Context

This criterion refers to the energy section and underlines the importance of identifying heating/cooling loss and leakage in buildings in order to save energy.

***Assessment and verification:** the applicant shall provide the energy performance audit report and provide detailed documentation on how the campsite has fulfilled this criterion.*

Compliance and documents to be attached

The applicant shall

- a. provide a declaration from the expert who carried out the energy performance audit
- b. provide a document describing the findings of the audit;
- c. provide a declaration on which of the audit's recommendations will be implemented until the next visit.

Electronic Verification Form: Optional Criteria, Row 17

Note:

The typical energy performance audit includes a top-to-bottom survey of the building(s), including attics, knee walls, above grade walls, windows, doors, basement or crawl spaces, and heating/cooling/hot water systems. Infiltration tests are done using a blower door and digital manometer to estimate total leakage and diagnose its effect. Thermal imaging presents the actual state of thermal insulation of a building, identifying quickly the areas of heat/cooling loss (statistically, 31% occur on floors, walls and ceiling, 15% on ducts, 14% on fireplaces, 13% on plumbing penetrations, 11% on doors, 10% on windows, 4% on fans and vents and 2% on electric outlets).

[Return to top of criteria](#)

41. Air conditioning (up to 2 points)

All household air conditioners in the campsite have an energy efficiency 15% higher than the threshold to qualify for class A in Commission Directive 2002/31/EC (1.5 points). All household air conditioners in the campsite have an energy efficiency 30% or higher than the threshold to qualify for class A in Commission Directive 2002/31/EC (2 points).

This criterion does not apply to appliances that can also use other energy sources, air-to-water and water-to-water appliances, or units with an output (cooling power) greater than 12 kW.

Context

This criterion refers to the energy section and its aim is to save energy for the air conditioning resulting from high efficiency of the air conditioning system.

***Assessment and verification:** The applicant shall provide relevant documentation showing compliance with the criterion.*

Compliance and documents to be attached

a. The applicant shall provide evidence that his air conditioning system has a 15% higher energy efficiency than requested by class A by means of technical specification from a professional technician responsible for installation, sale and/or maintenance of the air conditioning system.

OR

a. The applicant shall provide evidence that his air conditioning system has a 30% higher energy efficiency than requested by class A by means of technical specification from a professional technician responsible for installation, sale and/or maintenance of the air conditioning system.

Electronic Verification Form: Optional Criteria, Row 18

Note: evidence from the technical booklet of the air conditioning system may be included in the technical specification.

[Return to top of criteria](#)

42. Automatic switching-off of air conditioning and heating systems (1.5 points)

There shall be an automatic system that turns off the air conditioning and heating of rental accommodation when windows are open.

Context

This criterion refers to the energy section and its aim is to avoid the waste of energy resulting from heating or cooling a room which has an open window.

Assessment and verification: *The applicant shall provide technical specification from the professional technicians responsible for the installation sale and/or maintenance of the air conditioning system.*

Compliance and documents to be attached

The applicant shall provide evidence of having a system which automatically switches off heating or air conditioning if the windows are open, by means of technical specification from the professional technicians responsible for the installation sale and/or maintenance of the air conditioning system.

Electronic Verification Form: Optional Criteria, Row 19

[Return to top of criteria](#)

43. Bioclimatic architecture (3 points)

Buildings on the campsite ground shall be built according to bioclimatic architectural principles.

Context

This criterion refers to the energy section and its aim is to reduce consumption of resources and promote the use of natural resources.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate documentation.*

Compliance and documents to be attached

Bioclimatic architecture refers to the structure of the building and tackles natural ways to save and use natural resources. Some examples are reported below.

The applicant shall:

- a. satisfy at least six of the following or similar conditions;
- b. provide a detailed explanation, for example a technical report, showing evidence of how the campsite fulfils the criterion;
- c. include any other appropriate documentation as evidence of compliance with the criterion.

Electronic Verification Form: Optional Criteria, Row 20

NATURAL HEATING

Measures are taken to make best use of heating from natural climate

1. appropriate exposure of the buildings and pitches to winter sun;
2. appropriate shelter of campsite from winter winds through natural (vegetation) or artificial devices;
3. appropriate position of windows to use winter sun;

NATURAL LIGHT

Measures are taken to make best use of natural light

4. windows are placed in such a way that natural light on a sunny day is available for at least 8 hours a day for at least six months of the year in common areas;
5. windows are placed in such a way that natural light on a sunny day is available for at least 8 hours a day for at least six months of the year in at least 50% of the rental accommodations;
6. the campsite does not interfere with the opportunity of adjacent buildings to use natural light;

NATURAL COOLING

Measures are taken to make best use of cooling from natural climate

7. appropriate orientation of the campsite buildings and rental accommodation to summer shade and/or shading of pitches through vegetation;
8. appropriate exposure of the campsite buildings, pitches and rental accommodation to summer breezes;
9. appropriate shading of windows with natural or artificial shading devices;
10. appropriate array of windows, rental accommodation, common areas and corridors to enhance natural ventilation;
11. appropriate devices in place to bring air from cool to warm sites (for example through mechanical ventilation systems which input cool air from basement in common areas);

NOISE

Measures are taken to reduce the noise transmission

12. common areas are enhanced with material which hinder noise transmission to other parts of the campsite;
13. the campsite buildings and outer boundaries are constructed using material which reduces noise to the outside;
14. vegetation is used to reduce noise transmission on the campsite ground.

BUILDING MATERIALS

Measures are taken to increase the use of local building materials

15. at least one main part of the campsite buildings is built with local materials;
16. at least one main part of the campsite buildings is built with recycled material;
17. there are measures in place to minimise the amount of energy embodied in new construction materials;

LANDSCAPE INTEGRATION

Measures are taken to maximise the integration of the campsite with the landscape

18. according to the site, the campsite is integrated into the landscape;
19. the campsite makes use of local vegetation (for example vegetation which does not need much watering)
20. OTHER specify

[Return to top of criteria](#)

44. Energy efficient refrigerators (1 point), **ovens** (1 point) **dishwashers** (1 point), **washing machines** (1 point), **dryers/tumblers** (1 point) and **office equipment** (maximum of 3 points).

(a) (1 point): All household refrigerators shall be of Class A+ or A++ efficiency according to Commission Directive 2003/66/EC of 3 July 2003 amending Commission Directive 94/2/EC of 21 January 1994 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric refrigerators, freezers and their combinations¹⁹, and all frigo- or mini-bars shall be at least class B efficiency.

Assessment and verification: The applicant shall provide documentation indicating the energy class of all the refrigerators and frigo or mini-bars.

(b) (1 point): All household electric ovens shall be of class A energy efficiency as laid down in Commission Directive 2002/40/EC of 8 May 2002 implementing Council Directive 92/75/EEC with regard to energy labelling of household electric ovens.

Assessment and verification: The applicant shall provide documentation indicating the energy class of all the household electric ovens.

Note: The criterion does not apply to ovens not operated with electric energy or otherwise not covered by Commission Directive 2002/40/EC (e.g. industrial ovens).

(c) (1 point): All household dishwashers shall be of class A energy efficiency as laid down in Commission Directive 1999/9/EC of 26 February 1999 amending Directive 97/17/EC implementing Council Directive 92/75/EEC with regard to energy labelling of household dishwashers.

Assessment and verification: The applicant shall provide documentation indicating the energy class of all the dishwashers.

Note: The criterion does not apply to dishwashers not covered by Directive 1999/9/EC (e.g. industrial dishwashers).

(d) (1 point): All household washing machines shall be of class A energy efficiency as laid down in Commission Directive 96/89/EC of 17 December 1996 amending Directive 95/12/EC implementing Council Directive 92/75/EEC with regard to energy labelling of household washing machines.

Assessment and verification: The applicant shall provide documentation indicating the energy class of all the washing machines.

Note: The criterion does not apply to washing machines not covered by Directive 96/89/EC (e.g. industrial washing machines) .

(e) (1 point): At least 80 % of office equipment (PCs, monitors, faxes, printers, scanners, photocopying machines) shall qualify for the energy star as laid down in Regulation (EC) No 106/2008 on a Community energy efficiency labelling programme for office equipment²³ and in Commission Decision 2003/168/EC of 11 March 2003 establishing the European Community Energy Star Board.

Assessment and verification: The applicant shall provide documentation indicating the qualification for the energy star of the office equipment.

(f) (1 point): All electric tumble driers shall be class A energy efficiency as laid down in Commission Directive 1995/13/EC implementing Council Directive 92/75/EEC, with regard to energy labelling of household electric tumble driers.

Assessment and verification: The applicant shall provide documentation indicating the energy class of all electric tumble driers..

Note: The criterion does not apply to electric tumble driers not covered by Directive 1995/13/EC (e.g. industrial tumble driers).

Context

This criterion refers to the energy section and its aim is to reduce electricity consumption through the use of high efficiency equipment.

Compliance and documents to be attached

The applicant shall provide technical documentation for those of the appliances he complies with in this criterion, proving they possess the required characteristics and energy classes.

Electronic Verification Form: Optional Criteria, Row 21

[Return to top of criteria](#)

45. Electric hand and hair driers with proximity sensor (up to 2 points)

All electric hand (1 point) and hair (1 point) driers shall be fitted with proximity sensors or have been awarded an ISO Type I eco-label.

Context:

This criterion refers to the energy section and its aim is to avoid the waste of energy resulting from hand or hair dryers functioning also when there is no object placed near or under them.

***Assessment and verification:** The applicant shall provide appropriate supporting documentation of how the campsite fulfils this criterion.*

Compliance and documents to be attached

The applicant shall

- a. provide evidence that the hand- or hair driers installed on his campsite are outfitted with sensors which guarantee the emission of warm air only when an object is placed near them.
- OR
- b. include information on the hand- or hairdryers that have been awarded an ISO Type I eco-label.

Electronic Verification Form: Optional Criteria, Row 22-23

Note: evidence from the technical booklet of the appliance may be included in the documentation.

[Return to top of criteria](#)

46. Refrigerator positioning (1 point)

The kitchen, kiosk and shop refrigerator(s) shall be positioned and regulated according to energy saving principles, in order to reduce energy waste.

Context

This criterion refers to the energy section and its main aim is to reduce energy consumption from a rational positioning and management of the refrigerator. Often the positioning of the refrigerator may influence its consumption as much as the energy efficiency.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion.*

Compliance and documents to be attached

At least two of the following energy saving principles shall be respected:

1. the refrigerator is far from or shielded from sources of heat, such as the oven;
2. the cooling tubes of the refrigerator are well cleaned on a regular basis;
3. there are precise procedures to open the refrigerator as few times as possible.

The applicant shall

- a. specify which two actions are followed;
- b. provide an explanation of how he complies with the criterion.

Electronic Verification Form: Optional Criteria, Row 24

[Return to top of criteria](#)

47. Automatic switching off lights in rental accommodation (1,5 points)

Automatic systems which turn the lights off when guests leave the accommodation shall be installed in 95 % of the campsite rental accommodation.

Context

This criterion refers to the energy section and its aim is to avoid unnecessary light consumption in campsite rental accommodation, for example when the guest is not there.

***Assessment and verification:** The applicant shall provide technical specification from the professional technicians responsible for the installation and/or maintenance of these systems.*

Compliance and documents to be attached

The applicant shall

- a. ensure the functioning of an automatic system turning off lights when guests leave the rental accommodation;
- b. ensure that the system is in place in at least 95% of the rental accommodation;

c. provide technical specification from the professional technicians responsible for the installation and/or maintenance of these systems.

Electronic Verification Form: Optional Criteria, Row 25

[Return to top of criteria](#)

48. Sauna timer control (1 point)

All sauna units and hammams shall have a timer control or a staff procedure regulating the switching on/off.

Context

This criterion refers to the energy section and aims at reducing unnecessary energy consumption by adjusting sauna functioning according to need.

***Assessment and verification:** The applicant shall provide technical specification from the professional technicians responsible for the installation and/or maintenance of these systems.*

Compliance and documents to be attached

The applicant shall

a. provide technical specification that the sauna or hammam under his direct ownership or management has a time control;

OR

b. supply documentation about staff procedure regulating the switching on of the sauna or hammam only when it is needed;

Electronic Verification Form: Optional Criteria, Row 26

[Return to top of criteria](#)

49. Swimming pool heating with renewable energy sources (up to 1.5 points)

Energy used to heat swimming pool water shall come from renewable energy sources. At least 50%: 1 point, 100%: 1.5 points.

Context:

This criterion refers to the energy section and its aim is to promote the use of energy from renewable sources such as to diminish production of the greenhouse gas CO₂. When using solar power for heating processed water for example, about 70 kg of carbon dioxide emission and other harmful materials can be avoided per square meter collector surface per year.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this*

criterion, together with data on the energy consumed in heating swimming pool water and documentation showing the amount of energy used that comes from renewable energy sources.

Compliance and documents to be attached

The applicant shall

- a. describe the system used to heat the swimming pool(s); such as solar heating;
- b. report the % of heat production which it provides with respect to the total yearly energy consumption for heating the swimming pool(s) (as required also by criterion n. 28 on measurement of energy consumption);

Electronic Verification Form: Optional Criteria, Row 27

[Return to top of criteria](#)

50. Automatic switching off outside lights (1.5 points)

Outside lighting not needed for security reasons shall be turned off automatically after a defined time, or be activated through a proximity sensor.

Context

This criterion refers to the energy section and its aim is to avoid unnecessary energy consumption in outside lights, such as when outside natural light is sufficient.

***Assessment and verification:** The applicant shall provide technical specification from the professional technicians responsible for the installation and/or maintenance of these systems.*

Compliance and documents to be attached

The applicant shall

- a. ensure the functioning of an automatic system turning off outside lights when natural lighting is sufficient;
- b. provide technical specification from the professional technicians responsible for the installation and/or maintenance of these systems .

Electronic Verification Form: Optional Criteria, Row 28

[Return to top of criteria](#)

WATER - B

51. Use of rainwater (2 points) and recycled water (2 points)

(a) (2 points): Rainwater shall be collected and used for non-sanitary and non-drinking purposes.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation, and appropriate assurances that the sanitary and drinking water supply is kept entirely separate.*

(b) (2 points): Recycled water shall be collected and used for non-sanitary and non-drinking purposes.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation and appropriate assurances that the sanitary and drinking water supply is kept entirely separate.*

Context

This criterion refers to the water section and its aim is to save consumption of treated drinkable water for non drinking purposes.

Compliance and documents to be attached

The applicant shall

- a. ensure the implementation of a rainwater and/or a recycled water collecting system;
- b. ensure that this system shall be very clearly separate from the system distributing drinking water;
- c. provide a detailed explanation of how the campsite fulfils this criterion,
- d. provide appropriate supporting documentation, and appropriate assurances that the sanitary and drinking water supply is kept entirely separate.

Electronic Verification Form: Optional Criteria, Row 29-30

[Return to top of criteria](#)

52. Automatic watering systems for outside areas (1.5 points)

The campsite shall use an automatic system which optimises watering times and water consumption for outside plants/greening.

Context

This criterion refers to the water section and its aim is to reduce water consumption from watering plants and green areas in inefficient ways.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. identify the most efficient watering schedule for his plants and green areas;
- b. apply automatic watering systems which insure that best schedule;

c. provide documentation on the automatic watering system and the time schedule adopted.

Electronic Verification Form: Optional Criteria, Row 31

[Return to top of criteria](#)

53. Water flow from taps and shower heads (1.5 points)

The average flow from all taps and shower heads excluding bath taps and filling stations shall not exceed 8 litres/minute.

Context

This criterion refers to the water section and its aim is to reduce water consumption from guest use of showers and taps.

Assessment and verification: The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.

Compliance and documents to be attached

The applicant shall

- a. measure the water flow by collecting and measuring the water which flows from taps and shower heads in one minute
- b. identify the best way to reduce the flow of water to maximum 8 litres per minute if it results superior to that;
- c. provide a detailed explanation on how the criterion is fulfilled;
- d. provide any other documentation if the explanation is not considered complete enough.

Electronic Verification Form: Optional Criteria, Row 32

Note:

Suggestions for water reduction: use of water flow reducers, reduction of the pressure from source.

Formula for computation:

The average is calculated as follows:

$(\text{Litres/min from taps} * \text{number of taps}) + (\text{litres/min from shower heads} * \text{number of shower heads}) / \text{number of taps} + \text{number of shower heads} = 8 \text{ litres or less.}$

[Return to top of criteria](#)

54. WC flushing (1.5 points)

At least 95 % of WCs shall consume six litres per full flush or less.

Context

This criterion refers to the water section and its aim is to save water through reduction of water used for WC flushing.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. measure the quantity of water used at each flushing of the toilet (obtain information about the volume of the water tank from the manufacturer in the event the flusher is built into the wall, or from the technical documentation of the installed toilets)
- b. identify the best way to reduce the volume of flushing to 6 litres or less;
- c. provide a detailed explanation on how the criterion is fulfilled including a protocol of the measurements if such have taken place;
- d. provide any other documentation if the explanation is not considered complete enough.

Electronic Verification Form: Optional Criteria, Row 33

Note: Suggestions for water reduction:

- Manually fixing the floater of the water tank in order to limit the water consumption to 6 litres
- Reducing the volume of the water tank to 6 litres either with a sand filled bottle or bricks
- Install a two push button system where flushing will not exceed 6 litres.
- Install a single manual flushing system (flushes as long as you press the button).
- Install an automatic flow control system

[Return to top of criteria](#)

55. Dishwasher water consumption (1 point)

The water consumption of the dishwashers (expressed as $W(\text{measured})$) shall be lower or equal to the threshold as defined in the equation below using the same test method EN 50242 and programme cycle as chosen for Commission Directive 97/17/EC:

$$W(\text{measured}) \leq (0,625 \times S) + 9,25$$

where:

$W(\text{measured})$ = the measured water consumption of the dishwasher in litres per cycle, expressed to the first decimal,

S = the applicable number of standard place settings of the dishwasher.

The criterion only applies to household dishwashers.

Context

This criterion refers to the water section and its aim is to reduce the consumption of water used for the dishwasher.

Assessment and verification: *The applicant shall provide technical specification from the professional technicians responsible for the manufacture, sale or maintenance of the dishwashers or evidence that the dishwashers have been awarded the Community eco-label.*

Compliance and documents to be attached

The applicant shall

a. provide technical specification from professional technicians; or an equivalent document, like the information contained in the producer.s manual/technical booklet.

OR

b. provide evidence that the dishwasher in the campsite has been rewarded the EU eco-label;

c. provide the water consumption of the dishwasher attested by specifically installed water meters, as from criterion 96.

Electronic Verification Form: Optional Criteria, Row 34

Note: Example of water consumption:

A dishwasher with a 12 place setting shall have a maximum consumption of 16.75 litres per cycle; one with 6 place settings, shall have a maximum consumption of 8.5 litres per cycle.

[Return to top of criteria](#)

56. Washing machine water consumption (1 point)

The washing machines used within the campsite by guests and staff or those used by the campsite laundry service provider shall use no more than 12 litres of water per kg of wash-load measured according to EN 60456, using the same standard 60 °C cotton cycle as chosen for Directive 95/12/EC.

Context

This criterion refers to the water section and its aim is to reduce the potential water consumption for the laundry service.

Assessment and verification: *The applicant shall provide technical specification from the professional technicians responsible for the manufacture, sale or maintenance of the washing machines or evidence that the washing machines have been awarded the Community eco-label. The campsite management shall provide technical documentation from its laundry service provider that their washing machine complies with the criterion.*

Compliance and documents to be attached

The applicant shall

- a. enquire about the water consumption of the washing machine; (usually the information is reported in the technical booklet);
- b. provide technical specification from the technicians responsible for the manufacture, sale or maintenance of the washing machines, which may include information reported in the technical booklet;

OR

- c. provide evidence that the washing machine has been awarded the EU eco-label;

AND

- d. ask, if relevant, his laundry service provider technical documentation on how they comply with the criterion.

Electronic Verification Form: Optional Criteria, Row 35

[Return to top of criteria](#)

57. Tap water temperature and flow (1 point)

At least 95 % of taps shall allow a precise and prompt regulation of the water temperature and of the water flow.

Context

This criterion refers to the water section and its aim is to reduce the time needed to regulate water temperature, resulting in a lower water (and energy) consumption.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. install a system which enables to regulate the flow of water AND to reach the desired temperature in a few seconds;
- b. ensure that this system is installed in at least 95% of the guest rooms;
- c. provide a detailed explanation on how the campsite fulfils the criterion;
- d. provide appropriate supporting documentation of the temperature regulation mechanisms and adequate documentation showing its implementation if the explanation is not considered complete enough.

Electronic Verification Form: Optional Criteria, Row 36

Suggestions:

One usual way to control the water flow is to put single lever taps. For the temperature, there are sensitive lever systems which enable the heating system to quickly reach the desired

temperature.

[Return to top of criteria](#)

58. Shower timers (1.5 points)

All showers in sanitary facilities/ common areas shall have a timing/ proximity device which interrupts water flow after a defined time or if not in use.

Context

This criterion refers to the water section and its aim is to reduce consumption of water with respect to showers.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. ensure instalment of a system which turns the showers off after a certain time;
- b. provide detailed explanation on how the campsite fulfils the criterion;
- c. provide any other documentation (such as the technical specification for the devices and timers in showers) if the explanation is not considered complete enough.

Electronic Verification Form: Optional Criteria, Row 37

[Return to top of criteria](#)

59. Swimming pool cover (1 point)

At night or when the filled swimming pool is not used for more than a day, it shall be covered to prevent the cooling of the water in the pool and to reduce evaporation.

Context:

This criterion refers to the water section and its aim is to reduce water consumption through evaporation. Further aims are also the conservation of the temperature and therefore less need for energy consumption for water heating, and the reduction of pollution /algae growth.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. provide documentation on the type of cover used and the procedures followed for the pool

coverage.

b. provide documentation regarding the safety measures applied in order to avoid accidental stepping on the covering and/or. possibility of swimming underneath the cover

Electronic Verification Form: Optional Criteria, Row 38

[Return to top of criteria](#)

60. De-icing (up to 1.5 points)

Where de-icing of roads is necessary, mechanical means or sand/gravel shall be used in order to make roads on the campsite ground safe in case of ice/snow (1.5 points).

If chemical de-icing is used, substances which do not contain more than 1% chloride ion (Cl-) (1 point) or de-icers that have been awarded the Community Eco-label or other national or regional ISO type I eco-labels (1.5 points) shall be used.

Context:

This criterion refers to the water section and its aim is to reduce ground water pollution. Road salts are toxic to plants, wildlife, lakes, streams and groundwater. Even when used in small amounts, salt will leak into surrounding soil, changing the soil's composition and making it hard for plants to survive. Salt it is also highly corrosive to paved surfaces, buildings and cars.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. check if mechanical means of de-icing are enough to ensure safe transit on icy roads within the campsite;
- b. if otherwise necessary, choose de-icing products which respect the criterion;
- c. provide documentation on the type of de-icing used (mechanical or chemical) and de-icing procedures,
- d. if chemical de-icers are used, provide information on the products and their specifications.

Electronic Verification Form: Optional Criteria, Row 39

Note:

- De-icing should be done using mechanical means;
- Sand or gravel should be used to control snow and ice on the campsite roads and paths. This type of de-icing preserves and conserves local fauna and flora and biodiversity.
- *Eco-certified products should be used for de-icing (ISO Type 1 Ecolabel).*
- De-icing should not come at the expense of guest comfort (e.g. sharp-edged chips)

- An alternative to mechanical snow cleaning is to create a compact cover by pressing the snow without clearing it.
- Minimise the usage of snow clearing substances at dangerous locations, e.g. steep roads.
- To reduce the environmental impact of snow clearing, the standard value of 10 g per square meter should not be exceeded.
- It is important to realise that „sodium-free” gritting material also contain sodium chloride ions (NaCl), which create a higher environmental impact.
- Other chemical defrosters like urea, phosphate compounds, ammonium salts are not considered to be environmental friendly.

[Return to top of criteria](#)

61. Indications on water hardness (up to 2 points)

In proximity to sanitary areas/washing machines/ dishwashers there shall be displayed explanations on local water hardness (1 point) to allow better use of detergents by guests and staff or an automatic dosage system (1 point) shall be used which optimises detergent use according to water hardness.

Context

Water hardness influences the amount of detergents used for laundry. This criterion refers to saving chemicals through water indications.

Assessment and verification: The applicant shall provide a declaration of compliance with this criterion, together with relevant documentation showing how the guest is informed.

Compliance and documents to be attached

The applicant shall

- a. research the hardness of his water;
- b. put information to guests and staff in the places where the information is necessary and provide copy of this information;

AND/OR

- c. install automatic dosage systems for detergents already tuned to the water hardness
- d. provide a description of the dosage systems and on how its use is explained to the guests

Electronic Verification Form: Optional Criteria, Row 40-41

[Return to top of criteria](#)

62. Water saving urinals (1.5 points)

All urinals shall use a waterless system or have a manual/electronic flushing system, which permits single flushing of every urinal only when used.

Context:

This criterion refers to the water section and its aim is to reduce water consumption. Waterless urinals have the potential to save approximately 150.000 l of water per urinal per year in heavy usage scenarios. Waterless systems incorporate a dual seal to insulate the bathroom environment from sewer gases. There is a standing liquid barrier of greater than two inches, which is covered by a low-density, water-insoluble surfactant similar to olive oil in terms of its physiochemical properties. The polymeric surfactant, which is used as a sealant, is biodegradable and non-toxic, but permeable to higher density urine streams. This commercially available surfactant forms an added barrier or seal, which prevents the back-diffusion of undesirable sewer gases into the airspace of a restroom. Because of this added sealant, which floats on top of a normal water barrier, the waterless systems provide even greater protection to the local atmospheric environment from gases and bacteria than the traditional water-only trap systems in conventional flush urinals. They also use no de-scaling chemicals, detergents, strong cleaning chemicals or acid treatment materials, as are prevalent with most manual and automatic flushing urinals.

***Assessment and verification:** The applicant shall provide detailed supporting documentation of how the campsite fulfils this criterion.*

Compliance and documents to be attached

The applicant shall provide appropriate documentation on the type of urinal used, including a description of the chemicals for the waterless urinals and functioning of the flushing mechanism (manual or electronic, with amount of water for every flushing).

Electronic Verification Form: Optional Criteria, Row 42

[Return to top of criteria](#)

63. Indigenous species used for new outdoor planting (1 point)

Any planting of outdoor areas with trees and hedges shall be composed of indigenous species of vegetation.

Context:

This criterion refers to the water section and its aim is to reduce water consumption and groundwater pollution. Local flora is better adapted to the climate conditions and more resistant to potential parasites or illnesses than imported species. There will therefore be less need of chemical treatments and watering.

The danger of alien species lies, in some cases, in the faster growth on alien sites. This can lead up to the complete replacement of the indigenous plants. Reasons for this can be the lack of natural enemies and the favourable climate. This can lead to the loss of the genetic diversity of the specific area and replaces it with a genetic diversity that already exists elsewhere. If exotic species replace indigenous species with a certain function (e.g. steadying riverbanks) without being able to take over their function, the

landscape can be gravely damaged. These damages can only be repaired through complex and expensive reparations.

Assessment and verification: *The applicant shall provide the relevant specification of how the campsite fulfils this criterion, together with appropriate supporting documentation by an expert.*

Compliance and documents to be attached

The applicant shall provide appropriate documentation on the type of planting used, including

- a. description of the species planted;
- b. declaration of an expert (botanist or florist) regarding the geographical provenience of the plants and their appropriateness for the local climate.

Electronic Verification Form: Optional Criteria, Row 43

Note:

It is important to obtain information from an expert (e.g. forester) on indigenous species - as well as subspecies or/and varieties - especially appropriate for the campsite in order to recognise and understand the biodiversity aspects of the campsite and surrounding area in order to determine types of indigenous and non-indigenous flora (hilly or even, any rivers or lakes/seas). This is important as to the needs of the species (need of sun and water, shape of root etc.) It is preferable to chose robust species which are less sensitive to fungal decay or other illnesses. This avoids necessary replanting and the possible distribution of the illness. Plants should be bought, where possible from a regional or local supplier (e.g. forestry office or gardening centre). The transportation routes are shorter and the knowledge of the needs and optimal growing conditions of these species is more distinct.

[Return to top of criteria](#)

DETERGENTS AND DISINFECTANTS - B

64. Detergents (up to 3 points)

At least 80 % by weight of hand dishwashing detergents and/or detergents for dishwashers and/or laundry detergent and/or all purpose cleaners and/or sanitary detergents and/or soaps and shampoos used by the campsite shall have been awarded the Community Eco-label or other national or regional ISO Type I eco-labels (1 point for each of these categories of detergents up to a maximum of 3 points).

Context

This criterion refers to the chemical section and its aim is to reduce environmental impact due to detergents by promoting procurement of eco-labelled detergents. Only ISO Type I eco-labels are accepted.

Assessment and verification: *The applicant shall provide data and documentation (including relevant invoices) indicating the quantities of such products used and the quantities that have an Eco-label.*

Compliance and documents to be attached

The applicant shall

- a. indicate the amount by weight used yearly of one or more of the following detergent categories:
 - hand dishwashing detergents,
 - dishwasher detergents,
 - laundry detergents
 - all purpose cleaners;
 - sanitary detergents
 - soaps and shampoos
- b. indicate for each relevant category the amount of EU or ISO Type I eco-labelled product used yearly;
- c. provide evidence that the amount of eco-labelled detergent category is at least 80%;
- d. provide relevant documentation, such as relevant invoices, proving that the above stated detergents have been purchased by the campsite.

Electronic Verification Form: Optional Criteria, Row 44

Note: Manufacturers of ISO type I Ecolabel products can be found on the following websites:

- www.Ecolabel.com
- www.Blauer-engel.de
- www.Swanen.nu
- www.Umweltzeichen.at

[*Return to top of criteria*](#)

65. Indoor and outdoor paints and varnishes (up to 2 points)

At least 50 % of the indoor and/or outdoor painting of structures and rental accommodation, excluding rental caravans and mobile homes, shall be done with indoor and/or outdoor paints and varnishes awarded the Community Eco-label or other national or regional ISO Type I eco-labels. (1 point for indoor, 1 for outdoor paints and varnishes).

Context

This criterion refers to the chemical section and its aim is to reduce environmental impacts due to paints and varnishes by promoting procurement of eco-labelled products. Only ISO Type I eco-labels are accepted. This criterion refers to indoor and outdoor paints and varnishes. The period of validity of the criterion is considered to be three years back from the time of application and one year ahead, in the case that the painting of the campsite is planned shortly after the time of application.

Assessment and verification: *The applicant shall provide data and documentation (including relevant invoices) indicating the quantities of such products used and the quantities that have an Eco-label.*

Compliance and documents to be attached

The applicant shall

a. indicate the amount by weight of indoor paints and varnishes used or to be used within the campsite;

AND/OR

b. indicate the amount by weight of outdoor paints and varnishes used or to be used within the campsite;

c. indicate the amount of indoor and/or outdoor paints and varnishes used or to be used which have the EU or an ISO Type I eco-label;

d. provide evidence that the amount used of eco-labelled paints and varnishes is at least 50% with appropriate documentation (such as relevant invoices).

Electronic Verification Form: Optional Criteria, Row 45-46

[Return to top of criteria](#)

66. Car washing only in specially outfitted areas (1 point)

Car washing shall not be allowed, or shall be allowed only in areas which are specially equipped to collect the water and detergents used and channel them to the sewerage system.

Context: This criterion refers to the water section and its aim is to reduce groundwater pollution. The detergents used to clean and polish cars and the oil and fuel rests washed off can have a high environmental impact on soil and ground water, if not collected separately in a specially outfitted area and carried to the sewage system.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

a. enquire about the national and local legal requirements regarding the washing of cars on private or public and provide documentation to this regard;

AND

b. provide documentation such as the campsite regulation with the prohibition of washing cars on site if car washing is not allowed within the campsite

OR

c. provide documentation, such as technical specification from technicians or a copy of the project regarding the outfitting of the car wash area including the channel system for the waste water if car washing is allowed

Electronic Verification Form: Optional Criteria, Row 47

Note:

The criterion applies only where legislation permits washing of cars on public grounds.

[Return to top of criteria](#)

67. Support to alternatives to artificial barbecue lighter (1 point)

Excluding artificial barbecue lighting products, alternative products such as rape seed oil, hemp products, shall be sold in shops.

Context:

This criterion refers to the chemical section and its aim is to reduce pollution. Chemical fire lighting products can have a heavy impact on water and soil. They are also very toxic if ingested accidentally and highly dangerous in areas at fire risk.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion.*

Compliance and documents to be attached

The applicant shall

- a. enquire about the availability of alternative barbecue lighting products on the local market (example: rape seed oil, wood grain or hemp fibre pellets);
- b. provide documentation on the type of fire lighting products sold in the shops;
- c. inform guests about alternative methods of barbecue lighting
- c. provide a declaration that no chemical fire lighting products are sold in the shops on the campsite.

Electronic Verification Form: Optional Criteria, Row 48

[Return to top of criteria](#)

68. Swimming pools: Dosage of disinfectants (1 point) or natural/ecological swimming pools (1 point)

The swimming pool shall have an automatic dosage system that uses the minimum amount of disinfectant for the appropriate hygienic result (1 point).

Or

The swimming pool shall be of the ecological/natural type with only natural elements guaranteeing for the hygiene and safety of the bathers (1 point).

Context

This criterion refers to the chemical section and its aim is to reduce the amount of chemicals used in the swimming pool.

Assessment and verification: *The applicant shall provide a technical documentation concerning the automatic dosage system or the type of ecological/natural swimming pool and its maintenance.*

Compliance and documents to be attached

The applicant shall

- a. enquire about the minimum legal requirements of disinfectants in swimming pools, as appropriate to his situation;
- b. ensure an automatic dosage system conveying that minimum adequate amount;
- c. provide technical documentation, such as technical report from technicians or a copy of the project on the automatic dosage system, concerning the automatic dosage system.

OR

- c. provide detailed documentation with the description of the type of ecological/natural swimming pool and its maintenance.

Electronic Verification Form: Optional Criteria, Row 49

Note:

A natural or ecological pool mimics a natural pond. It has several depths of water to move it thermally instead of using a pump. A selection of special, but usually locally growing, plants is placed strategically to make use of their cleansing as well as oxygenation properties. Typha or bulrush or cattail is a favourite choice because of its ability to establish itself and vetiver is another. Plants with a rhizome (an underground stem) such as canna are also preferred. The usual idea is to remove as much of the nitrates and phosphates as possible. This is done to prevent the excessive growth of algae and the subsequent eutrophication of the waters. Care has to be taken not to allow the temperature of the water to go too high. This is done with appropriate shading trees in the right directions. The usual maintenance measures would include the removal of leaves using a skimmer and cleaning the pool of organic material as much as possible.

The pool itself is divided into two parts, one with the planted filter and stones called the water regeneration part and the other which is the water part where one swims. An alternative is to install biological filters to purify the water, rather than leave the job to water plants. This type of construction resembles more a traditional swimming pool than a natural swimming pool, but has the advantage that swimming area can be gained : in a natural swimming pool, about a third of the swimming area is taken in by the water plants.

The pools are lined at the bottom to prevent seepage of water usually with a UV resistant and tear resistant plastic and then lined with earth.

[Return to top of criteria](#)

69. Mechanical cleaning (1 point)

The campsite shall have precise procedures for conducting chemical-free cleaning, such as use of micro-fibre products or other non-chemical cleaning materials or activities with similar effects.

Context

This criterion refers to the chemical section and its aim is to reduce the use of chemicals used in cleaning activities

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation if relevant.*

Compliance and documents to be attached

The applicant shall

- a. identify precise procedures on how to carry out cleaning without chemical substances;
- b. provide a detailed explanation on these procedures;
- c. provide, if relevant, any other supporting documentation.

Electronic Verification Form: Optional Criteria, Row 50

Note:

“Mechanical cleaning” (in the context of this criterion) includes:

- Micro fibre products
- Synthetic cloths
- Steam evaporators.

Micro fibre products and **synthetic cloths** are mostly used for dry and semi-dry purposes and for plain surfaces including tables, windows and mirrors. Micro fibre products are not recommended for rough surfaces and wet purposes.

Steam evaporators are used for several purposes including the cleaning of floors (ceramics as well as carpets), toilets, swimming pool areas and kitchens. They usually work with high pressure and heat and achieve a high level of tidiness.

[Return to top of criteria](#)

70. Organic gardening (2 points)

Outside areas shall be managed either without any use of pesticides or according to organic farming principles, as laid down in Council Regulation (EC) N°834/2007 of 28 June 2007 on organic production and labelling and its subsequent amendments, or as laid down in national law or recognised national organic schemes.

Context

This criterion refers to the chemical section and its aim is to reduce the amounts of pesticides used, in order to reduce soil and water pollution.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation if relevant.*

Compliance and documents to be attached

The applicant shall

a. have procedures to ensure the management of green areas without any pesticides;

OR

b. have procedures to ensure the management of green areas with only those substances allowed by the Organic production of agricultural products;

AND

c. provide a detailed explanation of how the campsite fulfils the criterion;

d. provide any other relevant documentation.

Electronic Verification Form: Optional Criteria, Row 51

Note:

All types of organic gardening and farming should follow the regulation of IFOAM (International Federation of Organic Agriculture Movements) or a equivalent national organic certification program. If no organic gardens/farms exist, the campsite should contact an IFOAM recognised representative in order to obtain the organic farming and gardening guidelines.

Examples of how to begin the process towards organic gardening and farming:

- Use natural structures (wood, clay, stone) and cultivate the soil in organic way
- Avoid usage of any type of chemical fertilizers and pesticides
- Prepare a small composting plot. In the event on site composting is not possible, purchase compost which is organically certified
- Select local indigenous plants and flowers, including spice and medicinal plants. Some of these plants may have natural insect repellent characteristics (mints, garlic, dill etc.)
- Use rainwater for watering

Additional types of activities:

- Inform and show guest about organic gardening/farming
- Specially created and designated walking paths
- The campsite can designate a certain site within the campsite specifically for wild life (example: bird nesting)

[Return to top of criteria](#)

71. Insect and pest repellents (up to 2 points)

Architectural design of the accommodation and hygiene practices (such as building on stilts to prevent rats entering premises, use of mosquito nets and coils) shall ensure that the use of insect and pest repellents in the campsite is kept to a strict minimum (1 point).

If insect and pest repellents are used, only substances which are allowed for organic farming (as laid down in Council Regulation (EC) n° 834/2007 of 28 June 2007 on organic production and labelling) or that have been awarded the Community Eco-label or other national or regional ISO type I eco-labels shall be used (1 point).

Context:

This criterion refers to the chemical section and its aim is to reduce the amounts of chemical pest repellents used, in order to reduce soil and water pollution.

***Assessment and verification:** The applicant shall provide a detailed explanation how the campsite fulfils this criterion, together with appropriate supporting documentation if relevant.*

Compliance and documents to be attached

The applicant shall

a. have procedures to ensure the management of the premises without any chemical pest control;

OR

b. have procedures to ensure the management of the premises with only those substances allowed by the organic production and labelling regulation or which have been awarded an ISO type I ecolabel;

AND

c. provide a detailed explanation of how the campsite fulfils the criterion; including the description of the herbal or mechanical solutions chosen;

d. provide any other relevant documentation.

Electronic Verification Form: Optional Criteria, Row 52-53

Note:

Additional mechanical ways to avoid the usage of insect repellents:

- Frequently clean the premises.
- The installation of mosquito nets and coils on windows and doors can help against flying insects. Self-closing doors may hinder insects and other animals to enter e.g. the sanitary buildings.
- Many insects are attracted by light sources with a high fraction of ultraviolet rays. If possible avoid direct sources of light.
- Seal easily accessible areas and permeable windows

- Ensure waste bins are inaccessible to animals.

[Return to top of criteria](#)

WASTE - B

72. Composting (up to 2 points)

The campsite shall separate relevant organic waste (garden waste 1 point; kitchen waste 1 point) and shall ensure that it is composted according to local authority guidelines (e.g. by the local administration, in-house or by a private agency).

Context

This criterion refers to the waste management section . The main purpose of composting is to reduce the amount the overall waste being deposited at landfill thus reducing the environmental impact of waste. In addition it provides a possibility for the campsite to self develop a non harmful and natural fertilizer for the gardens.

Assessment and verification: The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation if relevant.

Compliance and documents to be attached

The applicant shall

- a. enquire on the local composting guidelines;
- b. identify all the various types of waste which is being generated by the kitchens and gardens that can and cannot be used for composting
- c. determine the location (on site or outsourced) of the composting site.
- d. provide a detailed explanation on procedures describing measures taken for composting: how to separate the various types of waste, which types of waste can be separated and where to deposit.;
- e. provide any necessary documentation of disposal through local public or private agencies.

Electronic Verification Form: Optional Criteria, Row 54-55

[Return to top of criteria](#)

73. Disposable drink containers (2 points)

Disposable drink containers shall not be offered in the areas under the ownership or the direct management of the campsite.

Context

This criterion refers to the waste management section and its aim is to reduce the production of waste from single use drink containers such as aluminium cans and plastic bottles.

Assessment and verification: *The applicant shall provide a declaration of compliance with this criterion, together with an indication of which such disposable products are used, if any, and the legislation requiring this.*

Compliance and documents to be attached

The applicant shall

- a. indicate any existing law requiring disposable drink containers within the campsite and, if relevant, the types of drink containers which must be disposable, according to law (for example in swimming pool areas, saunas and spas);
- b. indicate which disposable drink containers have been substituted with other options;

Electronic Verification Form: Optional Criteria, Row 56

Note:

If there is no substitution possible due to legislation requirements, this criterion cannot be fulfilled and the 3 points cannot be scored.

If soft drink, water, beer bottles are refillable and there are procedures in place for refilling, criterion n. 86 is also fulfilled!

[Return to top of criteria](#)

74. Fat/oil disposal (up to 2 points)

Fat separators shall be installed and pan fat/oils and deep-frying fat/oils shall be collected and disposed of appropriately (1 point). Proper disposal of own fat/oil is offered to guests (1 point).

Context

This criterion refers to the waste management section and its aim is to remove fat and oil from kitchen waste in order to prevent it from reaching the sewage treatment plant.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. ensure instalment of fat separators;
- b. provide a collection point for fat and oils for the food service area and at least one for the guests;
- c. communicate the location of these collection points to staff and guests;
- d. ensure the correct collection of fat and oils by the appropriate authority;
- e. provide a detailed explanation on how the criterion is fulfilled;
- f. provide any other appropriate documentation.

Electronic Verification Form: Optional Criteria, Row 57-58

[Return to top of criteria](#)

75. Run-off from car parks (1 point)

Oil and similar run-off from vehicles on the car park shall be collected and correctly disposed of.

Context: This criterion refers to the chemical section and its aim is to reduce groundwater pollution. Oil and fuel leaking from parked cars can have a high environmental impact on soil and ground water, if not collected separately in a specially outfitted area and correctly disposed of.

Assessment and verification: *The applicant shall provide a detailed explanation on how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. enquire about national and local legal requirements regarding the disposal of machine oil/fuel rests on private or public ground and provide documentation to this regard;
- b. provide a detailed explanation and appropriate documentation, such as technical specifications or a copy of the project regarding the outfitting of the car park, including the collecting system and the disposal of the collected waste.

Electronic Verification Form: Optional Criteria, Row 59

[Return to top of criteria](#)

76. Used textiles, furniture and other products (up to 2 points)

Used furniture, textiles and other products such as electronic equipment, shall be given to charity according to the campsite policy (2 points) or sold (1 point) to other associations which collect and redistribute such goods.

Context

This criterion refers to the waste treatment section and its aim is to reduce voluminous waste

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation from the associations.*

Compliance and documents to be attached

The applicant shall

- a. ensure the distribution or sale of used furniture, textiles, electronic equipment or other

- products to other associations or recipients;
- b. provide a detailed explanation on how the criterion is fulfilled;
- c. provide any other appropriate documentation.

Electronic Verification Form: Optional Criteria, Row 60-61

Note:

Examples of used textile, furniture and other products:

- Worn towel
- Sheets
- Tablecloths
- Uniforms
- Old crockery and cutlery
- Beds, chairs, tables, couches
- Bed mattresses
- TVs, radios, computers
- Refrigerators, washing machines

[Return to top of criteria](#)

OTHER SERVICES - B

77. Regulation of campsite traffic (1 point)

All traffic (guests and maintenance/transport) inside the camp ground shall be limited to defined hours and areas.

Context: This criterion refers to the environmental impact through noise and exhalations caused by vehicular traffic on the campsite.

Assessment and verification: *The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. identify and establish a policy of traffic reduction through careful organisation of the site (such as placing short-time guests next to the entrance and defining separate areas for mobile homes/campers. Areas for leisure activities such as sports and waste collection points should possibly also be separated from the caravan and tent sites.);
- b. establish traffic-free areas and hours;
- c. ensure the communication of these decisions in the campsite regulation and through appropriate indications;

d. provide a detailed explanation on how the criterion is fulfilled, including copy of the information given to the guests, stating where such information is situated in the campsite.

Electronic Verification Form: Optional Criteria, Row 62

[Return to top of criteria](#)

78. Campsite generated traffic (1 point)

The campsite shall not use combustion motor vehicles for transport and maintenance on the camp ground.

Context:

This criterion refers to the environmental impact of combustion motor vehicles. The use of non-motorized or electrical vehicles for transport and maintenance on the camp ground helps to avoid consumption of fossil fuel and the generation of noise and exhaust fumes. It also sets a positive example and contributes to the environmentally friendly image of the campsite

Assessment and verification: The applicant shall provide an explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.

Compliance and documents to be attached

The applicant shall

- a. identify and introduce means of maintenance and transport on the campsite premises which avoid combustion motors, such as electric carts and gardening appliances or transport bicycles;
- b. provide detailed explanation on how the criterion is fulfilled.

Electronic Verification Form: Optional Criteria, Row 63

[Return to top of criteria](#)

79. Trolleys for guests on the campsite (1 point)

For transportation of luggage and shopping on the site, trolleys or other non motorized means of transport shall be at guests' disposal free of charge.

Context:

This criterion refers to the environmental impact of vehicular traffic on the campsite. The consequences of guests driving their vehicles on the camp ground in order to transport their shopping, bathing and sports equipment or luggage are exhaust fumes, danger for playing children and fuel consumption. These can be significantly reduced if the campsite puts at guests' disposal handcarts or similar means of transport.

Assessment and verification: *The applicant shall provide an explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. identify and put at guests. disposal non motorized means of transportation for luggage, shopping, sports gear and similar items, such as trolleys, handcarts and transport bicycles;
- b. provide detailed explanation on how the criterion is fulfilled;
- c. provide a copy of the communication to the guests

Electronic Verification Form: Optional Criteria, Row 64

[Return to top of criteria](#)

80. Unsealed surfaces (1 point)

At least 90% of the campsite area surface is not covered with asphalt/cement or other sealing materials, which hinder proper drainage and airing of the soil.

Context: This criterion refers to the sealing of surfaces, which causes soil depletion, and hinders proper drainage of rain which can lead in some case to flooding and geological disasters

Assessment and verification: *The applicant shall provide an explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. identify and introduce alternative solutions to cemented/asphalted road, lanes, pitches and car areas, such as gravel, paving blocks with holes for grass or groundcover, brick, flagstone, quarry tile, wood planks, shredded bark and wood rounds.
- b. provide detailed explanation on how the criterion is fulfilled including appropriate documentation.

Electronic Verification Form: Optional Criteria, Row 65

[Return to top of criteria](#)

81. Roof landscaping (2 points)

At least 50% of campsite buildings which have suitable roofs (flat roofs or roofs with a small angle of inclination) and are not used for other purposes, shall be grassed or planted.

Context:

This criterion refers to the possibility, through planting on the roofs, to reduce the general sealing of landscape and create valuable living space for micro organisms. Green roofing is also known for reducing noise pollution (until 50 dB) and reduces energy consumption by 25% for heating and cooling.

***Assessment and verification:** The applicant shall provide an explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. research and carry out a project of planting the adequate roofs on his premises with resistant and indigenous species, such as local sedum varieties which require few watering and no fertilizer.;
- b. request a technical evaluation of the structure on which the planting will be situated, in order to establish if it will be able to carry the added weight;
- c. provide detailed explanation and documentation on how the criterion is fulfilled, including specification on the type of insulation, soil and flora used, the procedures necessary for their maintenance and a technical declaration regarding the stability of the planted surface and proof that at least 50% of the buildings with suitable roof are grassed or planted.

Electronic Verification Form: Optional Criteria, Row 66

[Return to top of criteria](#)

82. Environmental communication and education (up to 3 points)

The campsite shall provide environmental communication and education notices on local biodiversity, landscape and nature conservation measures to guests (1.5 points). Guest entertainment includes elements of environmental education (1.5 points).

Context

This criterion refers to the other services section and its main aim is to promote awareness and environmental communication to the guests.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. distribute brochures and other educational material about the environment of the accommodation premises to guests and visitors; The awareness raising material should be placed in the busiest areas of the campsite and in easily visible places.

- b. ensure that the material contains some information about responsible behaviour toward the environment;
- c. have information specific for young guests, if appropriate;
- d. include elements of environmental education in the guest entertainment, such as nature quizzes for children, eco-rallies, handicraft with natural materials, events with environmental themes, guided bicycle/walking tours or visits to natural/protected areas by public transportation and similar excursions;
- e. include text of the material distributed and the announcements of the entertainment offer, stating where such information is situated in the campsite;
- f. provide a detailed explanation on how the criterion is fulfilled.

Electronic Verification Form: Optional Criteria, Row 67-68

Note:

Examples of environmental and biodiversity information:

- Nature sites
- Nature trails and eco-tourism routes
- Observation posts to view wildlife
- Natural protected areas, NATURA 2000 territories, PAN PARK Protected Area Network of Parks,
- Local Bio-diversity
- Practical steps that can be taken to preserve biodiversity
- Importance of the EU Flower
- Information regarding the values of environmental sustainability
- Where to find local eco-tourism guides
- Local tourism maps
- Magazines related to the preservation of natural resources and restoration of nature
- Ecological movies

It is a challenge for urban campsites to connect with sustainability type issues. Thus the awareness raising could focus on the following:

- Eco friendly transportation in the city
- Locally owned stores where to purchase locally produced ecological and organic products
- Guided tours highlighting urban nature and urban biodiversity and wellness in the city

[Return to top of criteria](#)

83. No smoking in common areas and rental accommodation (up to 1.5 points)

Smoking shall not be allowed in 100 % of indoor common areas and at least 70% (1 point) or at least 95 % (1.5 points) of rental accommodation.

Context

This criterion aims to ensure the quality of air inside rooms and common areas for the comfort and safety of the guests.

***Assessment and verification:** The applicant shall indicate the number and nature of the areas and shall indicate which of these are non-smoking.*

Compliance and documents to be attached

The applicant shall

- a. ensure that all indoor common areas and at least 70% /95% of all rental accommodation are non smoking;
- b. provide a description of the number and nature of the areas and accommodation which are non-smoking.

Electronic Verification Form: Optional Criteria, Row 69

Note:

Non smoking signs should be clearly marked and visible

[Return to top of criteria](#)

84. Bicycles (1.5 points)

Bicycles shall be made available to guests. (At least 3 bikes for every 50 pitches and/or rental accommodation units)

Context

This criterion refers to the other services section and its aim is to promote the use of non polluting transportation.

***Assessment and verification:** The applicant shall provide an explanation of how the campsite fulfils this criterion.*

Compliance and documents to be attached

The applicant shall

- a. ensure that there are bicycles easily available to guests for free or for a fee;
- b. provide an explanation on how they are available to the guests.

Electronic Verification Form: Optional Criteria, Row 70

Note:

The bicycles can be present within the campsite grounds or the applicant may have a

convention with a bicycle rental near by and have information on the service available to guests within the campsite.

[Return to top of criteria](#)

85. Pick up service (1 point)

The campsite shall offer guests travelling with public transport pick up service at arrival with environmentally friendly means of transportation such as electric cars or horse sleds.

Context

This criterion refers to the other services section and its aim is to promote the use of non polluting transportation.

***Assessment and verification:** The applicant shall provide an explanation on how the campsite fulfils this criterion and an example how it is communicated to guests.*

Compliance and documents to be attached

The applicant shall

- a. provide an explanation on which kind of environmentally friendly pick up service he provides to his guests
- b. provide an example on how he communicates the pick up service to the guests.

Electronic Verification Form: Optional Criteria, Row 71

[Return to top of criteria](#)

86. Returnable or refillable bottles (up to 3 points)

The campsite shall offer beverages in returnable/refillable bottles: soft drinks (1 point), beer (1 point), water (1 point).

Context

This criterion refers to the other services section and its aim is to promote the re-use of bottles rather than their disposal.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation from the suppliers of the bottles.*

Compliance and documents to be attached

The applicant shall

- a. have providers which ensure the refilling of the bottles used within the campsite for the

drinks listed by the criterion;

b. provide a detailed explanation on how the criterion is fulfilled;

c. provide other appropriate documentation from the suppliers of the bottles.

Electronic Verification Form: Optional Criteria, Row 72

Note: if due to the procedures of refilling soft drink, water and beer bottles no disposable drink containers are sold, criterion n. 73 is also fulfilled!

[Return to top of criteria](#)

87. Use of rechargeable products (up to 2 points)

The campsite shall use only rechargeable batteries for TV remote controls (1 point), and/or rechargeable cartridges for toner for printers and photocopiers (1 point).

Context

This criterion refers to the other services section and its aim is to promote the re-use through recharging of products rather than their disposal.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with appropriate supporting documentation from the suppliers of the batteries and/or the refillers of the toner cartridges.*

Compliance and documents to be attached

The applicant shall

a. have providers which ensure the refilling of the toner cartridges for printers and photocopiers

b. provide documentation which proves the regular refilling of the cartridges

AND/OR

c. provide the number of TV remote controls present on the premises

d. provide documentation regarding the quantity of rechargeable batteries purchased

e. describe the procedures used for the recharging of the batteries

Electronic Verification Form: Optional Criteria, Row 73-74

[Return to top of criteria](#)

88. Paper products (up to 3 points)

At least 80 % of toilet/tissue paper and/or office paper and/or printed paper used shall have been awarded the Community eco-label or other national or regional ISO Type I eco-labels (1 point for each of these three categories of paper products)

Context

This criterion refers to the other services section and its aim is to reduce environmental impacts due to paper production by promoting procurement of eco-labelled paper products. Only ISO Type I eco-labels are accepted. This criterion refers to three kinds of paper products: One point is given for each kind of paper products purchased.

***Assessment and verification:** The applicant shall provide data and documentation (including relevant invoices) indicating the quantities of such products used and the quantities that have an eco-label.*

Compliance and documents to be attached

The applicant shall

a. indicate the amount by weight used yearly of one or more of the following paper products categories:

1. tissue /toilet paper,
2. office paper,
3. printed paper

b. indicate for each relevant category the amount of EU or ISO Type I eco-labelled product used yearly;

c. provide evidence that the amount of eco-labelled paper product category is at least 80%.

Electronic Verification Form: Optional Criteria, Row 75

Note:

The following are examples of recognised ecolabels for paper:

- **The EU Eco-label** in the European Union
- **The Nordic Swan** in Scandinavia and Iceland
- **The Blue Angel** in Germany
- **Dutch Milieukeur** in the Netherlands
- **Austrian Ecolabel** in Austria

Paper products which are marketed with other eco-labels or as “chlorine-free” do not meet this criterion.

[Return to top of criteria](#)

89. Durable goods (up to 3 points)

At least 30 % of any category of durable goods (such as bed-linen, towels, table linen, PCs, portables, TVs, mattresses, furniture, washing machines, dishwashers, refrigerators, vacuum cleaners, floor coverings, light bulbs) present in the campsite, including rental accommodation, shall have been awarded the Community eco-label or other national or regional ISO Type I eco-labels (1 point for each of up to three categories of durable goods).

Context

This criterion refers to the other services section and its aim is to reduce environmental impacts due to production of durable goods by promoting procurement of eco-labelled products. Only ISO Type I ecolabels are accepted. This criterion refers to several kinds of products, as long as they have been awarded the Community eco-label or an ISO Type I eco-label. One point is given for each kind of product purchased, up to a maximum of three points.

***Assessment and verification:** The applicant shall provide data and documentation indicating the quantities of such products owned and the quantities that have an eco-label.*

Compliance and documents to be attached

The applicant shall

- a. indicate the number of durable goods of up to three of the product categories present in the campsite such as bed-linen, towels, table linen, PCs, portables, TVs, mattresses, furniture, washing machines, dishwashers, refrigerators, vacuum cleaners, floor coverings, light bulbs
- b. indicate for each relevant category the number of EU or ISO Type I eco-labelled products present in the campsite grounds;
- c. provide evidence that the amount of eco-labelled durable goods present in the campsite grounds is at least 30%.

Electronic Verification Form: Optional Criteria, Row 76

[Return to top of criteria](#)

90. Local food products (up to 3 points)

At least two locally sourced and not out of season (for fresh fruit and vegetables) food products shall be offered at each meal, including breakfast (1.5 points).

Where applicable, consumption of local endangered species such as specific fish and crustacean species and “bushmeat” and shrimps from mangrove forest endangering cultivation shall be forbidden in the food outlets (1.5 points) and in the shops (1.5 points).

Context

This criterion refers to the other services section and its aim is to promote the use of local food products, in order to promote local economy and reduce transport. The criterion also intends to promote consumer perception against delicacies which involve endangered species.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

- a. indicate the locally sourced, seasonal products which are offered at meals and/or breakfast

within the campsite;

b. provide evidence that they are locally sourced and not out of season;

In case of endangered species,

d. declare any law regarding endangered or locally protected species and provide a declaration that no such species is served at meals or sold within the campsite.

e. provide a declaration that no shrimps from mangrove forest endangering cultivation is served or sold within the campsite.

Electronic Verification Form: Optional Criteria, Row 77-78

Note:

Locally sourced product is a product which has been caught or grown within 100 km of the campsite, or, if the geographical conditions of the country require to consider greater distances, it is a product which distinctly reflects a traditional national economy.

[Return to top of criteria](#)

91. Organic food (up to 3 points)

The main ingredients of at least two dishes (1 point) or the whole menu including breakfast (2 points) and at least 4 products sold in the shop (1 point) shall have been produced by organic farming methods, as laid down in Council Regulation (EC) N°834/2007 of 28 June 2007 on organic production and labelling or produced according to an ISO type I eco label.

Context

This criterion refers to the other services section and its aim is to promote the use of organic food.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with appropriate supporting documentation.*

Compliance and documents to be attached

The applicant shall

a. indicate the main ingredients of two dishes or the whole menu including breakfast given to the guests within the campsite;

b. provide evidence that they are grown according to organic farming methods or produced according to an ISO type I eco-label;

AND/OR

c. indicate the four organic products sold in the shop(s);

d. indicate the shop(s) which sell them,

e. provide evidence that they are grown according to organic farming methods or produced according to an ISO type I eco-label

Electronic Verification Form: Optional Criteria, Row 79-80

Note:

Main ingredient is the ingredient which is contained in most amount. For example: flour for bread and cakes, milk for creams and curds, vegetables for side dishes and salads (making specific reference to the most used types) etc.

[Return to top of criteria](#)

92. Indoor air quality (up to 4 points)

The campsite shall provide an optimal indoor air quality through one or both of the following measures:

- The rooms, rental accommodation and common areas shall correspond to European Council Directive 89/106/EEC, of 21 December 1988 (Annex I requirement no.3; hygiene, health and the environment) containing only painting, decorating, furniture and other materials certified with the European Eco-label or another equivalent low emission ISO type I environmental label (2 points).
- The rooms, rental accommodation and common areas shall be fragrance free, the sheets, towels and textiles shall be washed with fragrance free detergents (1 point) and cleaning shall be carried out with fragrance free means (1 point).

Context

This criterion refers to the other services section and its aim is to ensure a better indoor air quality to guests and staff

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with appropriate supporting documentation. As regards the fragrance free requirement, a list of components/ingredients of fragrance free washing and cleaning shall be considered as sufficient.*

Compliance and documents to be attached

The applicant shall

a. provide evidence that rooms, rental accommodation and common areas contain only painting, decorating, furniture and other materials certified with the European Eco-label or another equivalent low-emission ISO type I environmental label with a list of the products and the respective labels

AND/OR

b. provide evidence that rooms, rental accommodation and common areas are fragrance free, such as a list of the products used to wash sheets, towels and textiles AND/OR the products used for cleaning and their ingredients

Electronic Verification Form: Optional Criteria, Row 81-83

[Return to top of criteria](#)

GENERAL MANAGEMENT - B

93. EMAS registration (3 points), ISO certification (2 points) of the campsite

The campsite shall be registered under the Community eco-management and audit scheme (EMAS) (3 points) or certified according to ISO 14001 standard (2 points).

Context

This criterion refers to the general management section and its aim is to promote the implementation of environmental management systems of the campsite.

Assessment and verification: The applicant shall provide appropriate evidence of EMAS registration or ISO 14001 certification.

Compliance and documents to be attached

The applicant shall

a. provide evidence that the campsite has an EMAS registration;

OR

b. provide evidence that the campsite has an ISO 14001 certification.

Electronic Verification Form: Optional Criteria, Row 84-85

[Return to top of criteria](#)

94. EMAS registration (1.5 points) or ISO certification (1 point) of suppliers

At least one of the main suppliers or service providers of the campsite shall be registered with EMAS (1.5 points) or certified according to ISO 14001 (1 point).

Context

This criterion refers to the general management section and its aim is to promote the choice of suppliers which have implemented an environmental management system.

Assessment and verification: The applicant shall provide appropriate evidence of EMAS registration or ISO 14001 certification by at least one of his main suppliers.

Compliance and documents to be attached

The applicant shall

a. provide evidence that at least one of the campsite's main suppliers has an EMAS registration;

OR

b. provide evidence that at least one of the campsite's main suppliers has an ISO 14001

certification;

c. declare that the supplier which has an Environmental Management System in place is one of his main suppliers.

Electronic Verification Form: Optional Criteria, Row 86-87

Note:

Main supplier is one of the 10 main suppliers of the campsite in terms of quantity of products provided or entity of the service. For example: provider of soap, detergents, paper, food, may be among the main providers of goods. Agencies responsible for out-sourced laundry service, maintenance of HVAC or maintenance of office equipment may be among the main service providers.

[Return to top of criteria](#)

95. Compliance by subcontractors with mandatory criteria (up to 4 points)

Where additional services of food or leisure/fitness activities are subcontracted, those services shall comply with all the mandatory criteria of this Annex, that apply to that specific services (2 point for each service of food and beverage and/or leisure facilities which is present on the campsite).

Context

This criterion refers to the general management section and its main aim is to promote environmental awareness and management also among those services available to the campsite's guests which are not directly under the management of the applicant but which reflect directly on the image and the environmental impact of the campsite itself.

Assessment and verification: The applicant shall provide appropriate documentation of contractual agreements with his subcontractors regarding their compliance with the mandatory criteria.

Compliance and documents to be attached

The applicant shall

- a. assess and define the compliance of the relevant subcontractors with the applicable Section A criteria;
- b. present appropriate documentation for each subcontractor to show compliance with the mandatory criteria (filled in with the help of the digital verification form and accompanied by the requested documentation for each criterion).

Electronic Verification Form: Optional Criteria, Row 88

[Return to top of criteria](#)

96. Energy and water meters (up to 2 points)

The campsite shall have additional energy and water meters installed so as to allow data collection on consumption of different activities and/or machines, such as rooms, laundry and kitchen service and/or specific machines like refrigerators, washing machines, etc. (1 point). Every pitch has its own energy and/or water meter (1 point).

Context

This criterion refers to the general management section and its aim is to enable the campsite to monitor its consumptions in great detail.

***Assessment and verification:** The applicant shall provide a detailed explanation of how the campsite fulfils this criterion, together with an analysis of the data collected (if already available).*

Compliance and documents to be attached

The applicant shall

- a. install meters of water or energy which enable the separate consumption count of:
 1. areas of the campsite having a specific activity (for example the laundry service, the kitchen, one floor etc);
 2. specific machines (refrigerators, washing machines, etc);
 3. pitches.
- b. provide a detailed explanation of how he complies with the criterion together with existing data, if available.

Electronic Verification Form: Optional Criteria, Row 89-90

[Return to top of criteria](#)

97. Additional environmental actions (maximum 3 points)

Either:

(a) Additional environmental actions (up to 1.5 points each, to a maximum of 3 points): The management of the campsite shall take actions, additional to those provided for by way of criteria in this Section or in Section A, to improve the environmental performance of the campsite. The Competent Body assessing the application shall attribute a score to these actions not exceeding 1.5 points per action.

Context

This part of the criterion refers to the general management section and its aim is to promote other environmental action which may be particularly effective according to the conditions of the campsite.

***Assessment and verification:** The applicant shall provide a declaration of compliance with this criterion, together with a full description of each additional action the applicant wishes to be taken into account;*

Compliance and documents to be attached

The applicant shall

- a. identify, if any, an environmental action which has significant effect in reducing
 1. Energy consumption,
 2. Water consumption,
 3. Chemical substance use
 4. Waste production.
- b. provide a full description on how the campsite complies with the criterion;

Electronic Verification Form: Optional Criteria, Row 91

Or:

(b) Eco-label award (3 points): The campsite shall be awarded one of the national or regional ISO Type I eco-labels.

***Assessment and verification:** The applicant shall provide appropriate evidence of having been awarded an eco-label.*

Context

This part of the criterion refers to the general management section and its aim is to give credit to the campsite for achieving a national or local ISO Type I eco-label

Compliance and documents to be attached

The applicant shall

- a. ensure that the eco-label with which it has been awarded is ISO Type I eco-label;
- b. provide evidence of having been awarded the eco-label.

Note:

an ISO Type I eco-label is an eco-label which has been developed according to the ISO 14024 guidelines. These guidelines include taking into consideration the life cycle of the eco-labelled product, carrying out consultation with stakeholders, guaranteeing transparency of the criteria development and third party verification of compliance with the criteria.

Electronic Verification Form: Optional Criteria, Row 92

[Return to top of criteria](#)

[Return to Index](#)

Verification documents

This part describes the different verification documents which are required by the procedures for verification and assessment of compliance with the criteria and the usual body responsible for their release. Note that this list is of indicative nature.

Competent Bodies in other Member States may be able to provide details if the above indications do not apply. (contact details for Competent Bodies are on the European Commission's eco-labelling website at http://ec.europa.eu/environment/ecolabel/contacts/competent_bodies_en.htm)

Verification occurs at the request of applicants for the EU eco-label. Its scope is to assess that the campsite complies with the requirements of the EU eco-label scheme and can receive the logo without misleading the consumer or causing a damage to the image of the EU eco-label.

The verification procedures are as simple and inexpensive as possible. They mainly refer to the production of documentation. The main verification measures are: documentation, declaration and inspection. They are described as follows.

DOCUMENTATION

Documentation as a means of verification, means to produce a document which does not originate from the campsite. Examples of documentation are bills, invoices, contracts, and on

site inspection. As follows each of the documents mentioned in the verification procedures shall be explained.

Bill

For the scope of the verifications required by Commission Decision on campsite service criteria and described in this application pack, the bill is the document which certifies payment requests for the consumption of energy (heating, electricity) and water from the public or private authority responsible for the distribution of these resources. The bill usually indicates the amount of resources used. This number is important for the monitoring of consumption. This will show the campsite manager how much money he is saving due to the application of the EU eco-label.

Contracts

For the scope of the EU eco-label, contracts are the best verification document to assess compliance to a criterion requiring purchase of a continuous service, for example the waste disposal service according to waste separation measures, or the acquisition of electricity from renewable sources.

Invoice

Invoices verify compliance to the criteria acting on the purchase phase. They are the proof of having acquired a certain number of elements of a certain component, as required by the criterion. For example, invoices of light saving light bulbs, or of Energy Star office equipment state the kind of equipment present in the campsite. They also verify the intervention of a qualified professional on behalf of an action required, such as a maintenance check.

Registration or certification

For the scope of the EU eco-label, registration or certification documents satisfy the assessment of participation to other EMS, such as existing eco-labels and EMAS.

Technical Booklets

For the scope of the EU eco-label, technical booklets are a good verification document. They report the features of equipment. For example, a Class A washing machine shall have a technical booklet in which this feature is stated.

DECLARATION (THIRD PARTY OR SELF-DECLARATION)

For the scope of this application pack, a declaration is a signed document stating that the requested conditions are met. The truth of the declaration is intended to be under the responsibility of the person or Body signing the declaration.

Third party declaration

Declarations may come from manufacturers if they refer to product characteristics, from a public or private authority if they refer to services related to an activity of the campsite (for example: proper waste disposal of hazardous material).

Self-declaration

In particular, self-declaration as a means of verification, entails a written statement where the campsite manager states that what he writes is true, and can be checked by an audit. Self-declaration is a verification means for those situations where documentation, as stated above, is not easily available or where verification refers to activities which only depend on the campsite manager.

Self-declaration is a verification system which can be easily fulfilled and is not discriminating to applicants in relation to their size, geographical position and structure.

Often self-declaration can be double checked by on-site inspection, such as the average water flow from taps and showers, presence of information material for guests, or presence of staff at training workshops. Registers which are required by management criteria on data and environmental performances of equipment may be considered as evidence for self-declaration.

ON-SITE INSPECTION

On-site inspection as a means of verification is carried out when a situation must be seen. This means that assessment of compliance to the criterion needs the inspector.s judgment.

On-site inspections are carried out by auditors from Competent Bodies

[Return to Index](#)

MODEL FORMS

MODEL 1 : FORMS OF DECLARATION

(self-declaration, declaration from third parties)

I hereby declare that the campsite (insert registered name of the campsite) complies with criterion n. ... through the following situation:

(description and explanation on how the campsite complies with the criterion)

I include the following documents:

- Bill

- Invoice
- Technical documents/measurements
- Declaration from public authority
- Other _____

In truth,

Signature of the applicant

Signature from third party (technician, etc) if requested

MODEL 2: declaration of non application of the criterion

I hereby declare that criterion n. _____ is not applicable to the campsite (insert registered name of the campsite) due to the following situation:

(description and explanation on how the campsite complies with the criterion)

In truth,

Signature of the applicant

MODEL 3: enquiry letter to local providers/authorities.

I hereby declare that on date _____ I have sent the enquiry letter to the following local provider/ authority

- Energy provider
- Provider of drinking water
- Local administration
- Special waste disposing agencies
- Special waste disposal sites
- Trade association/Chamber of commerce
- Competent Body
- Other _____

asking the provision of the following information

- provision of electricity from renewable resources
- presence of a water protection plan study
- the presence and characteristics of a waste water plan
- types of separate waste categories collected
- collection of separate hazardous waste
- collective environmental training
- other _____

I include the answer which I have received from the authority in question.

In truth,

Signature of the applicant

[Return to Index](#)

Other important documents

From Annex III of Directive 91/689/EEC on hazardous waste

PROPERTIES OF WASTES WHICH RENDER THEM HAZARDOUS

H1 'Explosive': substances and preparations which may explode under the effect of flame or which are more sensitive to shocks or friction than dinitrobenzene.

H2 'Oxidizing': substances and preparations which exhibit highly exothermic reactions when in contact with other substances, particularly flammable substances.

H3-A 'Highly flammable': liquid substances and preparations having a flash point below 21 °C (including extremely flammable liquids), or -substances and preparations which may become hot and finally catch fire in contact with air at ambient temperature without any application of energy, or - solid substances and preparations which may readily catchfire after brief contact with a source of ignition and which continue to burn or to be consumed after removal ofthe source of ignition, or - gaseous substances and preparations which are flammable in air at normal pressure, or substances and preparations which, in contact with water or damp air, evolve highly flammable gases in dangerous quantities.

H3-B 'Flammable': liquid substances and preparations having a flash point equal to or greater than 21 °C and less than or equal to 55 °C.

H4 'Irritant': non-corrosive substances and preparations which, through immediate, prolonged or repeated contact with the skin or mucous membrane, can cause inflammation.

H5 'harmful': substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may involve limited health risks.

H6 'Toxic': substances and preparations (including very toxic substances and preparations) which, if they are inhaled or ingested or if they penetrate the skin, may involve serious, acute or chronic health risks and even death.

H7 'Carcinogenic': substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce cancer or increase its incidence.

H8 'Corrosive': substances and preparations which may destroy living tissue on contacts.

H9 'Infectious': substances containing viable micro-organisms or their toxins which are known or reliably believed to cause disease in man or other living organisms.

H10 'Teratogenic': substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce non-hereditary congenital malformations or increase their incidence.

H11 'Mutagenic': substances and preparations which, if they are inhaled or ingested or if they penetrate the skin, may induce hereditary genetic defects or increase their incidence.

H12 Substances and preparations which release toxic or very toxic gases in contact with water, air or an acid.

H13 Substances and preparations capable by any means, after disposal, of yielding another substance, e.g. a leachate, which possesses any of the characteristics listed above.

H14 'Ecotoxic': substances and preparations which present or may present immediate or delayed risks for one or more sectors of the environment.

Test methods

The methods to be used are those described in Annex V to Directive 67/548/EEC, in the version as amended by Commission Directive 84/449/EEC (2), or by subsequent Commission Directives adapting Directive

67/548/EEC to technical progress. These methods are themselves based on the work and recommendations of the competent international bodies, in particular the OECD.

From Annex VIII of Directive 2000/60/EC

INDICATIVE LIST OF THE MAIN POLLUTANTS

1. Organohalogen compounds and substances which may form such compounds in the aquatic environment.
2. Organophosphorous compounds.
3. Organotin compounds.
4. Substances and preparations, or the breakdown products of such, which have been proved to possess carcinogenic or mutagenic properties or properties which may affect steroidogenic, thyroid, reproduction or other

endocrine-related functions in or via the aquatic environment.

5. Persistent hydrocarbons and persistent and bioaccumulable organic toxic substances.

6. Cyanides.

7. Metals and their compounds.

8. Arsenic and its compounds.

9. Biocides and plant protection products.

10. Materials in suspension.

11. Substances which contribute to eutrophication (in particular, nitrates and phosphates).

12. Substances which have an unfavourable influence on the oxygen balance (and can be measured using parameters

such as BOD, COD, etc.).
