Question 1:

Could you give me further explanation on the required experience? Do all team members need to have at least 3 years of experience in the field of endocrine disruptors? Or do the 3 years of experience refer to the team's total experience?

If part of the team is designated to work solely on data search and information gathering, does this team member also need 3 years of experience regarding ED?

Answer 1:

the condition of experience in the field of endocrine disruptors refers to the team to ensure that at least one team member has "minimum three but preferably five years' experience in the field of endocrine disruptors".
