

23rd July 2009

**CLARIFICATION
to call for tender
ENV.C.3/SER/2009/0056**

Question 1:

Tender specifications on page 3 - task 1, it is mentioned that it is expected that in total a minimum of at least 20 countries would be assessed.

I would like to know whether this refers to 20 countries in total or does it refer to the additional countries (additional to non EEA annex 1 countries +US+China+India). In other words, does this study require to inventory about 13 mandatory countries + 20 to be selected, or does it require a minimum of 20 countries including 13 mandatory countries?

Task 1, Page 3 - It is intended that the mandatory "non EEA Kyoto Protocol Annex I countries as well as the United States of America, China and India" - are included in the "at least 20 countries".

Question 2:

the study mentioned in footnote 1: "Technical support for options for European action to reduce greenhouse gas emissions from transport in the period to 2050"; Contract ENV.C.3/SER/2008/0053.

Could you indicate which contractor or consortium has been awarded the study as mentioned in footnote 1 and whether there are already results available?

The study "Technical support for options for European action to reduce greenhouse gas emissions from transport in the period to 2050"; Contract ENV.C.3/SER/2008/0053 was awarded to a consortium lead by AEA Technology in the UK. All public details about the project can be found online at:
