Eurostat – Health care facilities

Beds in residential long-term care facilities

Definitions

<table>
<thead>
<tr>
<th>Beds in residential long-term care facilities</th>
<th>Residential long-term care facilities comprise establishments primarily engaged in providing residential long-term care that combines nursing, supervisory or other types of care as required by the residents. In these establishments, a significant part of the production process and the care provided is a mix of health and social services, with the health services being largely at the level of nursing care, in combination with personal care services. The medical components of care are, however, much less intensive than those provided in hospitals.</th>

**Bulgaria**

Beds in residential long-term care facilities
Source of data: National Statistical Institute, Exhaustive annual survey
Reference period: 31st of December
Coverage: All disclosed beds in hospices and Homes for medico-social care for children.
Estimation method: The types of activities as residential mental retardation, mental health and substance abuse care are predominantly done in specialized hospitals and dispensaries and are reported as HP 1.
Note: Decrease in 2013: As a part of the implementing measures of the National Strategy "Vision for Deinstitutionalization of Children in Bulgaria" in 2013 one home for medico-social care has been closed and the number of beds in some of the remaining establishments has decreased.
Decrease in 2015: As a part of the implementing measures of the National Strategy "Vision for Deinstitutionalization of Children in Bulgaria" in 2015 11 homes for medico-social care has been closed and the number of beds in some of the remaining establishments has decreased.

Nursing beds at regional level
Source of data: National Statistical Institute
Reference period: 31st of December
Coverage: All available beds in hospices and Homes for medico-social care for children.

Czech Republic
Beds in residential long-term care facilities
Source of data:
- Beds in social care sector: Ministry of Labour and Social Affairs (Annual report on social care establishments and provision of social care services).
- Beds in health care sector: Institute of Health Information and Statistics of the Czech Republic (Survey on bed resources of health establishments and their exploitation).
Reference period: 31st December.
Coverage:
Beds in social care sector:
- Until 2006, data refer to the total number of beds in the following establishments of social care services: Pensioners’ houses (including common establishments of pensioners’ houses and pensioners’ lodging houses), establishments for handicapped, homes for nuns.
- From 2007 (a new act on social services came into effect), data refer to the number of beds for yearlong and week stays in the following establishments of social care services: week care centres, homes for disabled persons, homes for the elderly, special regime homes.
Beds in health care sector:
- Long-term care beds encompass all beds in institutes for long-term patients (existing since 1973) and beds in hospices (existing since 1996).
- Since 2000, data cover all health services.

Source of data: Statistics Denmark.
Reference period: Annual average.

**Nursing beds at regional level**
Data not available.

Notes updated: 2017

**Germany**

Beds in residential long-term care facilities
Reference period: Data are collected every other year as at 15th December.

Coverage:
- Long-term care beds comprise beds in nursing homes (HP.2) in all sectors (public, not-for-profit and private).
- Data contain the number of places available in nursing homes for the elderly and disabled. In this context, "Long-term care“ is defined by the long-term care insurance act - Code of Social Security Legislation XI.
- The result for Germany, for the reporting year 2009, contains estimated data for Bremen. The estimation is sufficiently exact for a reasonable result for Germany, but not acceptably exact for a description of the situation in Bremen.
- Care statistics were completely reorganised in Germany in 1999. Therefore, comparable data are not available before 1999.

**Nursing beds at regional level**
Source of data:
Reference period: Data are collected every other year as of December 15.
Coverage:
- Long-term care beds only comprise beds in nursing homes (HP.2) in all sectors (public, not-for-profit and private).
- Data contain the number of places available in nursing homes for the elderly and disabled. In this context, "Long-term care“ defined by the long-term care insurance act - Code of Social Security Legislation XI.
The result for Germany for the reporting year 2009 contains estimated data for Bremen. The estimation is sufficiently exact for a reasonable result for Germany, but not acceptably exact for a description of the situation in Bremen. Break in the series: Care statistics were completely reorganised in Germany in 1999. Time trends analysis bridging this period should be avoided or done with extreme caution. 

Notes updated: 2017

Estonia

Beds in residential long-term care facilities
Source of data:

Validity of the source: Service-centred statistical reports since 2003 and onwards; for years before 2003 institution-centred reports, data are comparative.

Reference period: End of the year.

Coverage:
- In the table there are figures for HP 2.3 and HP 2.2 beds; none of the institutions have been defined as HP 2.1 in Estonia during the reference period.
- Since 2003, beds for disabled children in institutional welfare service have been included. For earlier years, no separate data were collected for disabled children in welfare institutions for children.
- Number of beds in institutions providing 24-hour care services for the persons with special psychiatric needs and the elderly.
- The increase in number of beds in 2012 resulted mainly from the increase in residential long-term care beds for the elderly (467 beds). The number of beds in special care homes increased by 63.

Note: In Estonia, hospitals that provided only in-patient long-term care services (long-term care hospitals) were reorganised to the nursing care hospitals. This restructuration came into force in the beginning of 2013. Previous long-term care hospitals (HP1) were classified amongst long-term nursing care facilities (HP2.1) according to the SHA2011. Therefore, the number of long-term nursing care facilities increased in 2013. Previous long-term care hospitals had 725 beds and nursing care facilities 9650 beds, in total 10375 beds in the end of 2013. In the end of 2014 previous long-term care hospitals had 698 beds and nursing care facilities 10204 beds, in total 10902 beds.

Notes updated: 2017

Ireland

Beds in residential long-term care facilities
Source of data:
- From 2010: Health Information and Quality Authority (HIQA).
- Up to 2009: Department of Health and Children, Annual Survey of Long-Stay Units.

Coverage:
- Data as at December.
- Data refer to HP2 facilities providing residential care for older people, which are registered as “designated centres” as defined by the Health Act 2007 with the Health Information and Quality Authority (HIQA). All residential settings for older people are required by law to
register with HIQA. Data refer to the registered capacity of a centre.

Break in time series:
- Break in series occurs in 2014: the basis for counting capacity changed during the year following a change in the Registration Regulations.
- Break in series occurs in 2010. Data prior to 2010 was sourced from the Annual Survey of Long-Stay Units. Approximately 80% of long-stay units respond to this survey each year. For facilities where no data was received, bed numbers were rolled forward from the previous year.
- Break in series occurs in 2009. Data also include beds in district and community hospitals. Beds for limited stay (rehabilitation, convalescence, palliative and respite) were also included from 2009.
  Prior to 2009: Figures include long-stay beds in long-stay geriatric homes, welfare homes and private nursing homes.

Nursing beds at regional level

Greece

Beds in residential long-term care facilities
Source of data: Hellenic Statistical Authority (EL.STAT.), Hospital Census.
Coverage: Data available only for years 1980-2000, derived from a survey concerning institutions for social anticipation. After 2000, this survey ceased.

Nursing beds at regional level
Source of data: Hellenic Statistical Authority (EL.STAT.), Hospital census
Reference period: 31st December
Coverage: The coverage is complete at regional level.
Deviation from the definition: Concern only psychiatric nursing beds

Notes updated: 2017

Spain

Beds in residential long-term care facilities
Source of data: Ministry of Health, Social Services and Equity - Unity of Elder People and Social Services Information. See at: http://www.imsersomayores.csic.es.
Reference period: Annual average.
Coverage:
- 2005 data underestimated by partial geographical coverage.
- Since 2011, total geographical coverage.
- There are multiple factors affecting comparability in figures: variability of management, budget swings in public/private supply of nursing beds, absence of formal records of the information. (This explains the sharp increase 2010-2011).
Deviation from the definition: Beds for palliative care in all types of nursing and residential care facilities (HP.2) are not included. Total data may be under-estimated.
Nursing beds at regional level
Reference period: Annual average.
Coverage: 2005 under-estimated by partial geographical coverage: Pais Vasco partial data referred only to Alava and Guipuzcoa. No figures from Castilla – La Mancha and Illes Balears.
Ciudad autónoma de Ceuta: only data 2007 and 2008.
Since 2011 total geographical coverage
Data refer to psychogeriatric beds, identified as the number of beds of specialized and multidisciplinary attention to the mental health of the elderly person (dementia, cognitive impairment, behavioural problems and other mental disorders) in both public and private residential centres for persons older than 65 years in Spanish regions which provided the information (through their regional public administrations).
There is a lack of normative commitment among Spanish regions in order to send such information on a global basis. As a result, there are multiple factors affecting comparability in figures: variability of management, budget swings in public/private supply of nursing beds, absence of formal records of the information.
Difference in methodology: Beds for palliative care in all types of nursing and residential care facilities (HP.2) is not included. Total data can be under-estimated.

Italy

**Beds in residential long-term care facilities**

Source of data: Ministry of Health - General Directorate of digitalisation, health information system and statistics - Office of Statistics. [www.salute.gov.it/statistiche](http://www.salute.gov.it/statistiche)
Reference period: Annual average.
Coverage: Data refer to all public and private residential care facilities accredited by the National Health Service. Private facilities not accredited by the National Health Service are excluded.

- Data report beds in HP.2 “Nursing and residential care facilities” for public and private accredited facilities. These residential care facilities have two separately-countable types: facilities providing services of long-term nursing care (i.e. services comprised under item HC.3 of ICHA-HC), and facilities providing services of rehabilitative care (i.e. services comprised under item HC.2 of ICHA-HC).

Break in time series: 2003. The data reported since 2003 comprise only beds in facilities providing services of long-term nursing care, i.e. services exclusively comprised under item HC.3 of ICHA-HC.

**Nursing beds at regional level**

Reference period: annual average.
Coverage: Data refer to all public and private accredited by National Health Service residential care facilities. Private facilities not accredited by National Health Service facilities are excluded.

Until 2002: Data report beds in HP.2 Nursing and residential care facilities, for public and private accredited facilities. These residential care facilities are countable separately in two types: facilities providing services of long-term nursing care (i.e. services comprised under HC.3 item of ICHA-HC) and facilities providing services of rehabilitative care (i.e. services comprised under HC.2 item of ICHA-HC).
Since 2003: Data report beds in facilities providing services of long-term nursing care, i.e. services exclusively comprised under HC.3 item of ICHA-HC, according to definitions of Joint data collection.

Cyprus
Beds in residential long-term care facilities
Data not available.

Notes updated: 2017

Latvia
Beds in residential long-term care facilities
Source of data: Social Services Board of the Ministry of Welfare of the Republic of Latvia and the Central Statistical Bureau of Latvia.
Reference period: 31 December.
Coverage:
- Data include: Specialised children's social care centres and specialised state social care centres. In Latvia these two types of establishments mainly provide beds for residential mental retardation and mental health care (HP.2.2).
- Beds for palliative care are included in HP.1.
- Due to the fact that in the data source only planned beds are indicated, we use indicator "actual number of persons" thus equating this indicator to beds in nursing and residential care facilities.
Break in time series: 2014. Starting from 2014, data exclude short-term social care beds in hospitals and persons with disability in HP.82 but include HP.2.1 beds and HP.2.2 beds (actual number of persons).

Notes updated: 2017

Lithuania
Beds in residential long-term care facilities
Source of data: Statistics Lithuania, Health Information Centre of Institute of Hygiene, data of entire annual survey of health establishments.
Reference period: 31st December.
Coverage:
- number of beds in nursing homes for disabled adults
- number of children in special boarding schools and centres for special training
- number of beds in care homes for disabled children and youth (boarding school)
- number of beds for the children with disability in county and municipality child care homes (since '2006')
- number of beds in care institutions for the elderly
- number of beds in nursing hospitals or nursing departments of general hospitals.

Notes updated: 2017

Luxembourg
Beds in residential long-term care facilities
Reference period: 31 of December.
Coverage:
Until 2012:
- The number of long-term care beds reported refers to the number of beneficiaries covered by the long-term care insurance (“assurance dependence”).
- Institutions for dependent persons accommodate both non-dependent and dependent persons. There is no information concerning the number of beds for dependent persons only.
- Data for 2012 are preliminary.
Since 2014: Data based on approvals and controls realised by the Ministry of family and integration for long-term care facilities (HP 2.1 and HP 2.9).
Notes updated: 2017

Hungary
Beds in residential long-term care facilities
Coverage: Since 1999, data include the capacity of social institutions providing permanent and temporary accommodation. Data contain the capacity of permanent or temporary accommodation for elderly people, psychiatric patients, disabled people and addicted people, and do not contain the permanent and temporary accommodation for the homeless.
Break in the series: Before 1999, data included figures for any social institution providing permanent and temporary hospitalisation, including the institutions providing permanent or temporary accommodation for the homeless.
Nursing beds at regional level
Coverage: Capacity of social institutions providing permanent and temporary accommodation since 1999. It contains the capacity of permanent and temporary accommodation for elderly people, psychiatric patients, disabled people and addicted people, and does not contain the permanent and temporary accommodation for the homeless.
Notes updated: 2017

Malta
Beds in residential long-term care facilities
Source of data: Department of Elderly and Community care and Department of Institutional Health within Ministry of Health, the Elderly and Community Care.
Figures from 2007 onwards supplied by Health Care Services Standards, Health Division within Ministry for Energy and Health.
Reference period: annual average
Coverage: All facilities provide both residential and nursing care facilities.
The discrepancy in 2004 is due to a change in the licensing category of the main geriatric hospital in Malta - from a nursing care facility to a geriatric care hospital
Changes in bed numbers for 2008 reflect ongoing restructuring within Health Division and relicensing of health care entities.
There is again an upward trend in HP.2 beds at end 2009 as the main state Geriatric Hospital was relicensed as a residential and nursing care facility for the elderly.
The number of beds in residential long-term care facilities in 2011 has been edited since some day care beds were incorrectly added to the total number of beds under this heading.
In 2012 the number of beds in residential long-term facilities increased since a publicly owned residential home has begun operating. From 2013 onwards figures now include available beds in residential long term facilities rather than licensed beds. Break in the series: 2005, 2008, 2009, 2013

Notes updated: 2017

Netherlands

Beds in residential long-term care facilities
Source of data:
- From 2006: DigiMV, data from annual reports of publicly financed institutions.
- From 2002: Centraal Bureau voor de Statistiek, Long-term care institutions surveys.
- Until 2002: Centraal Bureau voor de Statistiek, Intramurale Gezondheidszorg, table 3 (several issues).

Coverage:
- From 2012 onwards: Beds in nursing homes and residential care homes for the elderly and long term care residences for the disabled.
- until 2012: Beds in nursing homes and residential care homes for the elderly.

Nursing beds at regional level
Data not available at NUTS 2 level.

Portugal

Beds in residential long-term care facilities
Data not available.
Nursing beds at regional level
Data not available.
**Romania**

Beds in residential long-term care facilities  
Source of data: National Institute of Statistics.  
Reference period: data as of 31st December.  
Coverage: Includes beds in medico-social units and beds in social care facilities for the disabled adult people. Excludes beds in homes for elderly.  
Starting with 2010 data include: beds in medico-social units and beds in social care facilities for the disabled (adult and children) people  
The increase in the number of beds in 2010, compared to 2009, is due to inclusion in NIS statistical survey, of units that provide medical and social care for children with disabilities. Until 2010 data were collected only for entities that provide medical and social care for adults with disabilities.  
Break in time series: 2010, 2015  
Since 2015, the nursing beds also include the residential units for the elderly in which medical care is provided.  

**Nursing beds at regional level**  
Reference period: data as of 31st December.  
Coverage: The data for period between 1998 and 2006 refer only to public sector.  
For the period 1992-2004, beds for rehabilitation are included.  
Starting with 2010 in the statistical survey "Activity of medical units" have been collected data from residential units for disabled children, which led to an increasing the number of beds in residential long-term care units.  
Since 2015, the nursing beds also include the residential units for the elderly in which medical care is provided.  

**Slovenia**

Beds in residential long-term care facilities  
Source of data: Social Protection Institute of the Republic of Slovenia and Association of Social Institutions of Slovenia  
Coverage:  
- HP.2.1. - Housing communities included in government programs financial scheme  
- HP.2.2 - Mental Health and Substance Abuse Facilities for Slovenia include data on Beds in Housing communities for people with long-term mental health problems.  
Deviation from the definition: Data for Slovenia include beds in HP.2.1 and HP.2.2.  

**Nursing beds at regional level**  
Data are not available from NIIZ databases.  

**Slovakia**

Beds in residential long-term care facilities  
Source of data: Record of Statistics Office of Slovak Republic, No.1-01.  
Coverage:  
- Data refer to number of social service facilities and its capacity.  
- Data refer to beds in social service homes, specialised facilities, residential homes for seniors, rehabilitation centers, and residential nursing facilities.
Number of beds in 2004 – 2007 also includes data on sheltered housing facility.
Data refer only to beds dedicated to long-term care in social facilities where health care service is not provided.

Nursing beds at regional level
Data at regional (NUTS2) level are not available.
Notes updated: 2017

Finland
Beds in residential long-term care facilities
Source of data: National Institute for Health and Welfare (THL), Care Register for Institutional Health Care and Care Register of Institutional Social Care.
Estimation method: Since 1996, calculated bed-days/365 or 366.

Nursing beds at regional level
Source of data: National Institute for Health and Welfare (THL), Care Register for Institutional Health Care.
Estimation method: Since 1994, calculated bed-days/365 or 366.
Break in time series: 2000. The series was recalculated from 2000 onwards to correspond to the SHA 2011 definitions.
In 1996 Åland did not submit Care Register figures at all. In 2000 figures were submitted only from two municipalities.
Notes updated: 2017

Sweden
Beds in residential long-term care facilities
Source of data:
- The National Board of Health and Welfare, Care and services to elderly persons 1990-onwards,
- The National Board of Health and Welfare, Care inputs for persons with impairments according to the Social Services Act and the Health and Medical, 1990- onwards,
- The National Board of Health and Welfare, Persons with certain functional impairments – measures specified by LSS Act 1995- onwards,
- Federation of Swedish County Councils, Basårsstatistik (local nursing homes operated by the county councils).
Reference period:
- 2010 1st November.
- 2011 and onwards 1st October.
Coverage:
- Data include long-term beds in residential homes for the elderly over 65 years old and for persons with functional impairments 0-64 years which provide medical care as well as daily living services. Total long-term care (LTC) includes the “social” and “health” components of long-term care (HC.3 and HC.R.6.1).
- Data also include beds for need-tested short-term care. For the year 1998, data were missing on beds for need-tested short-term care. Until 1997, data also include local nursing homes operated by the county councils as an effect of the Ädel Reform. Those beds have decreased since the Ädel Reform in 1992, and since 1998 they have all been transferred to the municipalities.
- The number of institutional care beds belonging to the Health Service decreased in 1992 because of the ’Ädel-reform’ which transferred about 31000 beds to the social sector (municipalities). These beds are now referred to as beds in nursing and residential care
facilities. In 1994, additional care beds have been taken over by the municipalities. After the Ädel Reform, the local levels and the municipalities are responsible for and perform most of the long term care services.
- Data exclude LTC beds in hospitals.
- In 2010, there was a shift in measuring methods for beds in nursing and residential care facilities. Data from 1990-2009 are based on group data collected from the Swedish municipalities. Date of measurement is 1 October each year. From 2010 data are based on individual data (including consumers’ national registration numbers) collected from the Swedish municipalities. The information refers to conditions on 1 November. That means that there could be some differences between 2010 and previous years.
- For the year 2013, the National Board of Health and Welfare did not publish any data based on individual data. Therefor the figures for 2013 are based on group collected data.
- For the year 2014, the National Board of Health and Welfare data is based on individual data.

Nursing beds at regional level
From 2010 and onwards data at NUTS 2 level is available, with the exception of the year 2013.
Source of data: National Board of Health and Welfare, Data refer to recipients who have received care and services in institutions specified by the Act Support and Service to Certain Functionally Handicapped Persons (LSS) and according to the Social Services Act (SoL), and the Health and Medical Services Act 1990 (HSL).
Reference period:
- 2010: 1st November.
- 2011 and onwards: 1st October

Coverage: Data refer to recipients (individuals) who have received care rather than available beds.
Deviation from the definition: Data are not available at NUTS 2 level before year 2010 and year 2013, only on total level. Correction of data at the national level have been made for the years 2010-2012 and 2014 in connection with the data at the regional level has been developed.

Break in time series:
2014: In 2013 information on nursing beds was based on group data because of difficulties with new collection methods. In 2014 the information is again based on individual data (including the national registration number of the recipient).
2013: The data for nursing beds are collected as group data.
2010: Information on nursing beds from 2010 is based on individual data (including the person’s national registration number) instead of based on group data as before.

United Kingdom

Beds in residential long-term care facilities
Source of data:
- England: Care Quality Commission Database.
- Northern Ireland: Department for Health,
https://www.health-ni.gov.uk/topics/doh-statistics-and-research/care-not-home-statistics. The information provided refers to financial years, i.e. the 2010 figure refers to the financial year 2009/10. Since 2005, information has been provided by the Regulation and Quality Improvement Authority (RQIA). Data from 1999 to 2005 refers to the position as at 31
March. For 2006 the position is as at 30 September. From 2007 on, figures relate to the position as at 30 June.

**Coverage:**
- Data for England relate to registered places. 2003-10 data are based on Care Standards Act, for care homes registered at the specified dates between 1st April 2003 and 31st March 2010. Data for 2011 onwards are total care home bed numbers under the Health and Social Care Act, for care homes active at the specified dates. 2016 England data taken from CQC database as at 4 April 2016.
- The registration process took a few months which may explain a false dip in 2010.
- Please note bed numbers are as at date of data extraction and may not accurately reflect bed numbers at the year-end date.
- Care homes include ‘Care home service with nursing’ and ‘Care home service without nursing’. Details about service types can be found at website at this [link](http://wales.gov.uk/cssiwsbsite/newcssiws/publications/annualreports/0809report/annrep/?lang=en).
- The total number of beds provided is the total for residential and nursing homes combined.
- Data include beds or places in all nursing homes and those registered for personal care.
- Time series data have been amended so that data reflect the definition more accurately.
- Scotland: Information published on the number of registered places (i.e. beds) in care homes as at 31st March in any census period. This information is obtained for care homes registered with the Care Inspectorate.
- Wales: The number provided is the maximum registered beds in care homes for adults, and includes ‘personal care’ beds as well as ‘nursing care’ beds.
- For Northern Ireland figures for the Southern HSC Trust were unavailable in 2005. Data for Northern Ireland relate to the number of available nursing care beds in nursing homes. In 2016 Northern Ireland provided revised data for the period 2003-2015. Data were revised to include Residential care as well as Nursing care beds.
- Estimation method: Data from 2003 onwards are UK data.
- 2003: Data for Wales unavailable, hence UK estimate obtained by using Wales data from 2004.

**Nursing beds at regional level**
Data not available.

**Notes updated: 2017**

**Iceland**

**Beds in residential long-term care facilities**

Source of data:

Reference period: December.

Coverage:
- 1993-2006: Beds in nursing homes and nursing wards of retirement homes based on data on authorised beds from the Ministry of Health and Social Security and data collected from the
institutions by Statistics Iceland. Beds in retirement homes that are not for nursing care are excluded.
- 2007 and onwards: Beds in nursing homes and nursing wards of retirement homes, beds in health care facilities (not hospitals) both LTC beds and some curative care beds. Beds in retirement homes that are not for nursing care are excluded. Beds for LTC in hospititals are excluded.
- Data do not include beds in special institutions for the disabled.

Notes updated: 2017

Liechtenstein

Beds in residential long-term care facilities
Coverage: 100%. The increases in 1986 and 1995 are due to opening of new long-term facilities.
Break in time series: Due to an outsource in 2009 from the Hospital to a long term care facility, the number of beds is rinsing in the following years.

Notes updated: 2017

Norway

Beds in residential long-term care facilities
Source of data: Statistics Norway. Statistics on Specialist Health Services and Nursing and Care Statistics. The figures in HP2 are based on two different survey-based statistics, partly on “Nursing and Care” statistics and partly on “Specialist Health Services”. The statistics are collected annually for all nursing and residential care facilities in Norway. See http://www.ssb.no/speshelse_en/.
Reference period: Annual average.

Nursing beds at regional level
Source of data: The figures in HP2 are based on Nursing and Care statistics. The statistics are collected annually for all nursing and residential care facilities in Norway.
Reference period: annual average.
Coverage:
Beds in multidisciplinary specialist substance abuse treatment are not included. Beds in nursing and care, long term care, for elderly and handicapped, including substance abuse care are included.
