Methods and definitions

The **annual rate** measures the change of the Harmonised Indices of Consumer Prices (HICP) between a month and the same month of the previous year, and the **monthly rate** compares the indices between the two latest months.

A **contribution** shows how much of the annual inflation rate comes from a particular component of the HICP. The contributions are calculated according to a method which ensures their additivity (allowing for rounding).

Revisions and timetable

A flash estimate of euro area inflation is issued at the end of each reference month. The euro area [flash estimate for March 2018](#), published on 4 April 2018, was 1.4%.

The next flash estimate of euro area inflation with data for April 2018 is scheduled for 3 May 2018.

Data for the United Kingdom for February 2018 were not available in time for the HICP release of 16 March 2018, and EU totals were calculated using Eurostat estimates. Since then, the UK data have become available and the EU annual rate of change for February 2018 has been revised from 1.3% to 1.4% as a result.
