## **Summary analysis**

## International context: Growth slowed down in the US and in China in Q1 2015 Editorial

The US GDP growth rate in Q1 2015 is estimated at 0.1%, confirming the deceleration observed in the previous months: 0.5% in Q4 2014 after 1.2% in Q3 2014. In Q1 2015, the increase in consumer spending and inventory investment was offset by an expansion of the trade deficit, and a decline of business investment and state and local government spending. Nevertheless, compared to Q1 2014, annual GDP growth remained solid for the US, increasing by 3.0% in Q1 2015 after 2.4% in Q4 2014.

As concerns the BRICS countries (Brazil, Russia, India, China and South Africa), the economy also decelerated in China with a GDP growth rate of 1.3% in Q1 2015 coming after 1.5% in Q4 and 1.9% in Q3 2014. Compared to the same quarter of the previous year, GDP growth remained sound for China with a rate of 7.0% in Q1 2015 nevertheless declining from 7.3% in Q4 2014. The GDP growth rates of Brazil, Russia, India and South Africa in Q1 2015 will be released in the coming weeks but in Q4 2014 Brazil grew by 0.3% (annual GDP growth was -0.3%), India grew by 1.6% (annual GDP growth at 7.5%), South Africa grew by 1.0% (annual GDP growth at 1.3%) and Russia reported zero GDP growth in Q4 2014 (annual GDP rate at 0.1%).

## European Union and euro area: Growth slowly strengthening in Q1 2015 in euro area and in the EU

According to the flash estimate, the GDP growth rate was 0.4% in Q1 2015 for both the euro area and the EU as a whole. Compared to Q4 2014, it was a slight increase from the rate of 0.3% for the euro area while it was the same for the EU as a whole. The annual GDP rate also slightly improved to 1.0% in Q1 2015 from 0.9% in Q4 2014 for the euro area (from 1.3% in Q4 to 1.4% in Q1 2015 for the EU as a whole).

The euro area inflation rate was 0.2% in April 2015 according to the flash estimate, a third consecutive positive rate in a row after 1.1% in March and 0.6% in February. The annual inflation rate of the euro area was 0.0% in April 2015 after -0.1% in March 2015.

## Situation in the Member states: Growth accelerated in Italy, France and Spain

The economy accelerated in **Italy** with a GDP rate of 0.3% in Q1 2015 after stability in Q4 2014. In Q1 2015, Italy declared its highest rate of expansion since Q1 2011. The annual GDP growth rate for Italy reached 0.0% in Q1 2015 from -0.5% in Q4 2014. **France** reported a GDP rate of 0.6% in Q1 2015, the highest rate of expansion since Q2 2013, and coming after no growth in Q4 2014. The annual GDP growth rate for France climbed to 0.7% in Q1 2015, up from 0.0% in Q4. GDP grew by 0.9% in Q1 2015 in **Spain** after 0.7% in Q4 2014. Spain recorded in Q1 2015, its 7<sup>th</sup> quarter of expansion in a row. The annual GDP rate for Spain rose to 2.6% in Q1 2015 after 2.0% in Q4 2014. The economy slowed down in **Germany** with a GDP growth rate of 0.3% in Q1 2015 coming after an acceleration of 0.7% in Q4 2014. Annual GDP growth slightly declined to 1.0% in Q1 2015 after 1.5% in Q4 2014. Growth is continuing to lose momentum in the **UK** with a GDP rate of 0.3% in Q1 2015 after 0.6% in Q4 2014. Annual GDP growth remained sound, with a rate of 2.4% in Q1 2015 declining from 3.0% in Q4 2014.

In Q1 2015, the highest rate of expansion among the Member states was recorded by Romania and Cyprus, both at 1.6% coming after a contraction of 0.4% in Q4 2014 for Cyprus and an expansion of 1.0% for Romania. In Q1 2015, the annual GDP rates were respectively 0.2% for Cyprus and 4.2% for Romania.

By contrast Lithuania recorded the highest economic contraction among the Member States with a growth rate of -0.6% in Q1 2015 after an expansion of 0.7% in Q4 2014. The annual GDP rate declined to 1.5% in Q1 2015, down from 2.6% in Q4 2014.

## Latest macroeconomic developments

### Evolution of GDP

#### Industrial production

#### The European economy gains momentum

Seasonally and working days adjusted GDP rose by 0.3% in the euro area (EA19) and by 0.4% in the EU28 during the fourth quarter of 2014, compared with the previous quarter, according to a third estimate published by Eurostat. In the third quarter of 2014, GDP grew by 0.2% in the euro area and by 0.3% in the EU28. Compared with the same quarter of the previous year, non seasonally adjusted GDP rose by 0.9% in the euro area and by 1.2% in the EU28 in the fourth quarter of 2014, after +0.8% and +1.3% respectively in the previous quarter.

#### Construction production

In February 2015 compared with January 2015, seasonally and working days adjusted industrial production rose by 1.1% in the euro area (EA19) and by 0.9% in the EU28, according to estimates from Eurostat. In January 2015 industrial production fell by 0.3% in both zones. In February 2015 compared with February 2014, industrial production increased by 1.6% in the euro area and by 1.4% in the EU28.

#### Retail trade

In February 2015 compared with January 2015, seasonally and working days adjusted production in the construction sector fell by 1.8% in the euro area (EA19) and by 1.2% in the EU28, according to first estimates from Eurostat. In January 2015, production in construction grew by 1.6% and 0.6% respectively. In February 2015 compared with February 2014, production in construction fell by 3.7% in the euro area and by 2.4% in the EU28.

#### Inflation

In March 2015 compared with February 2015, the seasonally and working days adjusted volume of retail trade fell by 0.8% in the euro area (EA19) and by 0.6% in the EU28, according to estimates from Eurostat. In February retail trade rose by 0.1% in both zones. In March 2015 compared with March 2014 the retail sales index increased by 1.6% in the euro area and by 2.5% in the EU28.

#### Unemployment

Euro area annual inflation is expected to be 0.0% in April 2015, up from -0.1% in March and -0.3% in February. In March 2014 the rate was 0.5%. European Union annual inflation was also -0.1% in March 2015, up from -0.3% in February. A year earlier the rate was 0.6%.  
The euro area (EA19) seasonally-adjusted unemployment rate was 11.3% in March 2015, stable since January 2015, but down from 11.7% in March 2014. The EU28 unemployment rate was 9.8% in March 2015, stable since January 2015 and down from 10.4% in March 2014. Eurostat estimates that 23.748 million men and women in the EU28, of whom 18.105 million in the euro area, were unemployed in March 2015. Compared with February 2015, the number of persons unemployed decreased by 75 000 in the EU28 and by 36 000 in the euro area. Compared with March 2014, unemployment fell by 1.523 million in the EU28 and by 679 000 in the euro area.

#### Interest rates

Global short-term interest rates remain at very low levels. The Governing Council of the European Central Bank decided on April 15, 2015 that the interest rate on the main refinancing operations will remain unchanged at 0.05%, after having announced an expanded asset purchase programme in January. Up to now, the key official rates of the US Federal Reserve and Bank of Japan have been held at 0.25% and 0.1% respectively since end of 2008, and the UK's official bank rate has been unchanged at 0.5% since March 2009. The euro area's 3-month rate, Euribor, decreased to 0% in April from 0.03% in March and 0.05% in February, thus at a new lowest level. Long-term interest rates (monthly average weighted 10-year government bond yield) of the euro area strongly decreased to 0.91% in March 2015 from 1.05% in February and 1.14% in January, continuously decreasing since December 2013 (2.97%). The EU28 long-term interest rates show the same pattern decreasing from 3.03% in December 2013 to 1.26% in January 2015 after 1.50% in December 2014. Both rates are at their lowest level over the last decade.

#### Exchange rates

The euro / US dollar exchange rate (monthly average) fell to USD 1.0779 in April 2015, from 1.0838 in March and 1.1350 in February, continuously decreasing since March 2014 (1.3823). In April 2015, the euro continued to depreciate against the USD, the British Pound, the Japanese Yen and the Swiss Franc.

The **Eurogrowth Indicator** is not revised for Q1 2015 and revised up by 0.1% for Q2 2015 with estimates of 0.4% and 0.6%, respectively. In year-to-year comparison, the growth rate is forecasted at 1% and 1.5% respectively, confirming the recovery of the euro area economy. The depreciation of the euro against the US dollar and the rebound in the consumer confidence are the main contributors to this improving outlook, followed by better industrial survey data. The ECB's massive asset purchases seem to have affected industrial expectations positively. However, uncertainty on the Greek default and the Ukrainian crisis may weaken industrial confidence and GDP growth in the coming months.

The **€-coin indicator** rose in April, for the fifth month running, to 0.33 (from 0.26 in March). The indicator was mainly buoyed by the increase in industrial production and rising share prices.

For a description of the sources and methods on the indicators of growth and turning points, see the [Methodological notes](#) at the end of this section.

(\*) The Euroframe data differs slightly from the original publication because it has been computed with the new ESA 2010 series, unlike the original data which considered ESA 1995 series.

### Quarter-over-quarter GDP growth indicators (q/q-1)

### Year-over-year GDP growth indicators (q/q-4)

## Cyclical indicators for the euro area

### Business Climate Indicator continues to improve in April

The **Business Climate Indicator (BCI)** for the euro area increased slightly in April (by 0.09 points to +0.32). While managers' assessment of past production improved significantly, their views on the level of overall and export order books improved only mildly. Meanwhile, appraisals of the stocks of finished products remained broadly unchanged, whereas production expectations deteriorated.

The **Composite leading indicators (CLIs)** point to stable growth momentum in the OECD area as a whole as well as in Japan, Germany and the United Kingdom. The outlook is also for stable growth momentum in India. In the euro area, growth momentum continues to strengthen, particularly in France and Italy. Signs of easing growth momentum are emerging in the United States, although these may reflect transitory factors. The CLIs continue to point to easing growth in Canada and China and to a loss in growth momentum in Brazil and Russia.

The **IFO Index for the economic climate in the euro area** rose sharply to 129.2 points in the second quarter of 2015 from 112.7 points last quarter. The index rose to a level last seen prior to the outbreak of the world financial crisis and significantly above its long-term average of 106.1 points. Both assessments of the current economic situation and the six-month economic outlook brightened considerably. According to the experts surveyed, economic growth will amount to 1.5 percent this year. The euro area's economy is experiencing a clear upturn.

The main contribution to the favourable economic situation came from Germany. However, there were also gradual improvements in the other three large euro countries – France, Italy and Spain – where assessments nevertheless remained in the negative range. Assessments of the economic situation in Greece, Ireland, Austria and Portugal, by contrast, were more unfavourable than previously. In all other member states assessments remained positive on the whole, despite isolated downward revisions.

The experts surveyed expressed growing optimism about the six-month economic outlook in most countries. Positive expectations only clouded over slightly in Finland, Italy and Spain. Scepticism on the part of experts in Greece reached levels last seen three years ago. Experts forecast an average inflation rate of 0.6 percent in the euro area in 2015. Consumer prices are only expected to fall in Greece and Cyprus. Mid-term (2020) inflation expectations for most euro countries are 2 percent.

The **DZ-Euroland indicator** remained stable in April at 97.9 points. It is the fifth monthly increase in a row. The indicator is now at 97.9 points which represents an increase of 1.2% compared to the same month the previous year.

The **IARC turning point indicator** for the euro area is expecting the imminence of a trough of the growth cycle. It has passed the critical threshold of 80 by standing at 80.6 in April 2015, after 67.9 in March, and 54.5 in February.

The **start-end recession indicator (IESR)** remains stable at 0 in April 2015, after 0 in March and 0.01 in February and January, indicating no sign of recession. It had crossed the significant 0.5 threshold at the beginning of the second quarter of 2013, indicating an exit of recession of the euro area.

For more information about methodology on trend-cycle decomposition, see the [Methodological notes](#) at the end of this section.

**The EUROFRAME Euro Growth Indicator:** calculated by the OFCE (Paris) in cooperation with the EUROFRAME group, which consists of: CPB (Den Haag), DIW (Berlin), ESRI (Dublin), ETLA (Helsinki), IFW (Kiel), NIESR (London), PROMETEIA (Bologna), WIFO (Vienna), and CASE (Poland). The purpose of this leading indicator is to anticipate the development of the GDP in the euro area two quarters ahead of official statistics. The indicator considers surveys from industry, construction, and households, ISM survey of US industry, real euro/dollar exchange rate, and European stock index. The indicator is based on ordinary least squares (OLS) estimation of the GDP growth rate, and released on a monthly basis.

**€-COIN:** a real-time monthly estimate of euro area GDP growth, computed each month by the Banca d'Italia. It is obtained by collecting a large set of statistics and extracting from it information relevant to forecast future GDP. It tracks GDP growth anticipating official GDP releases by several months, by giving each month an early estimate of euro area growth in terms of quarter-on-quarter changes in GDP. Moreover, it sheds light on the underlying trend by removing short-run fluctuations and measurement errors from the growth rate; in this respect it is not only a forecast, but also an indicator of the true growth momentum in the euro area.

**The OECD Composite Leading Indicator:** designed to predict cyclical turning points (peaks and troughs) in GDP as a proxy of the business growth cycle of the overall economy. It comprises a set of component series from a wide range of economic indicators.

**IFO:** Economic Climate Indicator, designed to give an accurate picture of the economic situation and forecasts for economies on a quarterly basis. It consists of qualitative information: appraisals and expectations of economic experts. For the euro area the trend of the indicator correlates well with the actual business-cycle trend.

**DG ECFIN:** Business Climate Indicator (monthly), designed to deliver a clear and early assessment of the cyclical situation of the euro area. The indicator uses, as input, five balances of opinions from DG ECFIN's Business and Consumer Surveys. The resulting 'common factor' may be read as a survey result: the higher the level, the healthier the cyclical situation, and a rise in the indicator points to an upswing in activity and an improvement in business climate.

**DZ-Euroland-Indicator:** calculated by DZ Bank (monthly), aims at predicting recessions and has also proved to reflect movements in GDP growth rate. It is built on concepts implemented by the US Conference Board for monitoring cyclical indicators. Nine series for euro area or for the main countries are selected for their leading properties, and aggregated to give a composite index which can be compared with the level of GDP in order to anticipate recessions.

**IARC:** prepared each month by the French institute ACE - Analyzing Cycles in Economies. It is a monthly indicator aimed at forecasting turning points in the growth cycle. Each month, the probability that each selected series has crossed a turning point is computed. Probabilities are aggregated by a weighting method to give an overall signal of a possible downswing in the next nine months (a value of the indicator higher than 60 and lower than 80), or a very probable downswing in the three coming months (a value higher than 80).

**IESR:** prepared each month by the French institute ACE - Analyzing Cycles in Economies. It is a coincident indicator able to detect in real time peaks and troughs of the business cycle. It is based on the Markov-Switching model applied to various economic time series. The filtered probabilities are combined by taking into account the risks of false signals in order to provide a recession probability (a value of the indicator higher than 0.5).

## Methodological notes

### Indicators of growth and turning points – sources and methods

## Trend-cycle decomposition

The trend and cycle are two components of a time series that represent variations of low frequency and “business cycle” frequency, respectively, the high frequency fluctuations having been filtered out. Identifying and estimating trend and cyclical components of key economic indicators is invaluable when making decisions and informing policy-makers. The distinction between the two components helps the analyst ascertain whether any change to the indicator is temporary or permanent.

However, there exist many alternative methods to identify and estimate trends and (business or deviation) cycles. The estimates for three indicators – GDP, industrial production, and employment – are produced using three different filters:

**Hodrick-Prescott (HP):** a filter widely used in macroeconomics to fit a smooth curve through a set of points.

**Christiano-Fitzgerald (CF):** a well-known approximation to an ideal band pass filter, estimated non-parametrically.

**Unobserved Components (UC):** a parametric approach which involves estimating a statistical model and decomposing the series into components, including the trend and cycle

\*\* "Due to the fact that the Luxembourg Government does not have outstanding long-term debt securities with a residual maturity of close to ten years, the indicator is based on a basket of long-term bonds. This basket has an average residual maturity of close to ten years. The bonds are issued by a private credit institution and the indicator is thus not fully harmonised" source ECB
