Summary analysis

International context: Growth decelerated in the US and in China in Q3 2015

The second estimate revised up to 0.5% the GDP growth rate of the US in Q3 2015, declining from 1.0% in Q2. Q3 2015 is the sixth quarter of expansion in a row for the US economy. Positive contributions to the growth in Q3 2015 came from consumer spending, state and local government spending, business investment, exports and residential investment. The US annual GDP growth rate was revised up at 2.2% in Q3 2015, but still significantly declining from 2.7% in Q2.

Regarding the BRICS countries (Brazil, Russia, India, China and South Africa), the economy marginally decelerated in *China* with an annual GDP growth rate at 6.9% in Q3 2015, slightly declining from 7.0% in Q2. Nevertheless, the quarterly GDP growth rate remained constant at 1.8% in Q3 2015 compared to Q2. Growth is still losing momentum in China, from an annual GDP growth rate of 7.8% in Q3 2013 to 6.9% in Q3 2015.

The economy accelerated in *India* with a GDP growth rate of 1.9% in Q3 2015 coming after 1.7% in Q2. The annual GDP growth rate nevertheless declined to 7.1% in Q3, from 7.3% in Q2 2015. Since Q2 2015, the economy is growing faster in India than in China. The economy expanded in *South Africa* with a GDP growth rate of 0.2% in Q3 2015, after a contraction of 0.3% in Q2. Manufacturing industry was the largest contributor to this expansion. The annual GDP growth rate declined to 1.2% in Q3 2015 from 1.6% in Q2.

The deterioration of the economy deepened in *Brazil* in Q3 2015 according to IBGE (Instituto Brasileiro de Geografia e Estatística). The GDP quarterly growth rate contracted by 1.7% in Q3 2015 after an earlier contraction of 2.1% in Q2. The annual GDP growth rate declined to -4.5% in Q3 2015 after -3.0% in Q2. Q3 2015 is the sixth quarter of contraction in a row of the annual GDP growth rate in Brazil. *Russia* has not yet released its GDP growth rate of Q3 2015. But in Q2 2015 the economy contracted with a GDP growth rate of 2%, the fourth quarter of contraction in a row. The annual GDP growth rate declined to -4.5% in Q2 2015 from -2.2% in Q1.

European Union and euro area: Growth slightly slowed down in Q3 2015

GDP slightly slowed in the euro area with a growth rate of 0.3% in Q3 after 0.4% in Q2. According to the second estimate, the annual GDP growth rate remained stable at 1.6% in Q3 2015 compared to Q2. In Q3 2015, private consumption grew by 0.4%, government consumption by 0.6%, exports by 0.2% while gross fixed capital formation remained stable. Imports grew in Q3 by 0.9%, the same rate as in Q2, but lower than the rate of 1.9% recorded in Q1.

EU GDP also slightly decelerated with a quarterly growth rate of 0.4% in Q3 2015, after 0.5% in Q2. The annual GDP growth rate remained constant at 1.9% in Q3 2015 compared to Q2.

The flash estimate of the annual inflation rate in November 2015 for the euro area remained stable at 0.1% compared to October 2015. In order to address the prevailing economic situation, the ECB decided to extend its Asset Purchase Programme (APP) to run until at least the end of March 2017. The debt instruments issued by regional and local governments will also be eligible in the APP.

Situation in the Member states: Growth sound in Malta, Czech Republic and Sweden

Malta reported the highest annual GDP growth rate of the EU at 5.6% in Q3 2015, after 5.5% in Q2. This annual expansion was fuelled by quarterly GDP growth rates of 1.1% in Q3 and 1.4% in Q2. At 4.5% in Q3 2015, after 4.6% in Q2, the annual GDP growth rate was also notable in the Czech Republic. Sweden also showed a solid annual GDP growth rate of 3.9% in Q3 2015, up from 3.4% in Q2.

The largest EU economies are all expanding, with Spain reporting an annual GDP growth rate of 3.4% in Q3 2015, the UK 2.3%, Germany 1.7%, France 1.2% and Italy 0.8%.

Editorial

Latest macroeconomic developments

Evolution of GDP

Industrial production

The steady growth of the euro area economy is confirmed

Seasonally and working day adjusted GDP rose by 0.3% in the euro area (EA19) and by 0.4% in the EU28 during the third quarter of 2015, compared with the previous quarter, according to a second estimate published by Eurostat. In the second quarter of 2015, GDP grew by 0.4% and 0.5% respectively. Compared with the same quarter of the previous year, seasonally adjusted GDP rose by 1.6% in the euro area and by 1.9% in the EU28 in the third quarter of 2015, the same as in the previous quarter.

Construction production

In September 2015 compared with August 2015, seasonally and working day adjusted industrial production fell by 0.3% in the euro area (EA19) and by 0.1% in the EU28, according to estimates from Eurostat. In August 2015 industrial production fell by 0.4% and 0.2% respectively. In September 2015 compared with September 2014, industrial production increased by 1.7% in the euro area and by 1.8% in the EU28.

Retail trade

In September 2015 compared with August 2015, seasonally and working day adjusted production in the construction sector fell by 0.4% in the euro area (EA19) and remained stable in the EU28, according to first estimates from Eurostat. In August 2015, production in construction grew by 0.5% in the euro area and fell by 0.5% in the EU28. In September 2015 compared with September 2014, production in construction grew by 1.8% in the euro area and by 0.6% in the EU28.

Inflation

In October 2015 compared with September 2015, the Seasonally and working day adjusted volume of retail trade decreased by 0.1% in the euro area (EA19) and remained stable in the EU28, according to estimates from Eurostat. In September retail trade fell by 0.1% and rose by 0.3% respectively. In October 2015 compared with October 2014 the retail sales index increased by 2.5% in the euro area and by 3.1% in the EU28.

Unemployment

Euro area annual inflation is expected to be 0.1% in November 2015, stable compared with October 2015, up from -0.1% in September, according to a flash estimate from Eurostat. In October 2014 the rate was 0.4%. European Union annual inflation was 0.0% in October 2015, up from -0.1% in September. A year earlier the rate was 0.5%.

Interest rates

The euro area (EA19) seasonally-adjusted unemployment rate was 10.7% in October 2015, down from 10.8% in September 2015, and from 11.5% in October 2014. This is the lowest rate recorded in the euro area since January 2012. The EU28 unemployment rate was 9.3% in October 2015, stable compared to September 2015, and down from 10.1% in October 2014. This is the lowest rate recorded in the EU28 since September 2009. Eurostat estimates that 22.497 million men and women in the EU28, of whom 17.240 million were in the euro area, were unemployed in October 2015. Compared with September 2015, the number of persons unemployed decreased by 36 000 in the EU28 and by 13 000 in the euro area. Compared with October 2014, unemployment fell by 1.942 million in the EU28 and by 1.302 million in the euro area.

Exchange rates

On 3 December, 2015, The Governing Council of the European Central Bank decided to keep unchanged the interest rate on the main refinancing operations at 0.05%. ECB increases its efforts on the asset purchase program. The US Federal Reserve and the Bank of Japan decided to keep unchanged their key official rates at 0.25% and 0.1%, respectively. The UK's official bank rate has been unchanged at 0.5% since March 2009. The euro area's 3-month rate, Euribor, decreased to -0.09% in November, after -0.05% in October and -0.04% in September 2015. Long-term interest rates (monthly average weighted 10-year government bond yield) of the euro area decreased to 1.21% in November 2015, down from 1.39% in October. The EU28 long-term interest rates decreased to 1.43% in October from 1.59% in September.

The euro / US dollar exchange rate (monthly average) decreased to USD 1.0736 in November 2015 from 1.1235 in October and 1.1221 in September. The euro decreased slightly against the Japanese yen in November 2015 with an exchange rate of Yen 131.60 for one euro. The euro remained stable against the Swiss Franc with SF 1.0833 in November 2015. The euro /UK Pound Sterling exchange rate decreased slightly to GBP 0.70658 in November from 0.73287 in October.

Growth forecasts for the euro area

The economy of the euro area continues its recovery

The **Eurogrowth Indicator** remains unchanged for the fourth quarter 2015 with a GDP growth at 0.7%. It is expected to decrease to 0.5% in the first quarter of 2016. On a year-on-year basis, the growth rate decelerates a bit to 1.8% for the next two quarters, still up from the 1.6% of the third quarter published by Eurostat. It would be the highest rate of growth since the summer of 2011.

The main factors supporting the growth in the fourth quarter are the lagged effects of the devaluation of the euro, the construction sector, low energy prices and an improvement the labor markets, while the contributions of the consumer confidence and industrial surveys diminish but continue to support the growth.

Overall, the indicator predicts a solid growth stabilized by low interest rates, a weak euro, continuing low energy prices and an expected further alleviation of the monetary policy by the ECB. The impact of the terrorist attack in Paris may not have been fully captured by the surveys but it does not seem to have affected the sentiment of economic agents.

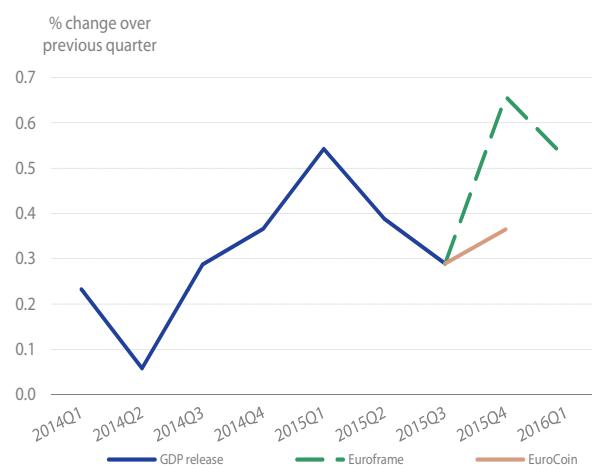

The **€-coin indicator** rose very slightly in November (to 0.37 from 0.36 in October) after declining for two consecutive months. It was buoyed by the improvement in household and business confidence (recorded for the most part before the Paris terrorist attacks of 13 November), which outstripped the negative contribution of persistently low inflation.

For a description of the sources and methods on the indicators of growth and turning points, see the [Methodological notes](#) at the end of this section.

Year-over-year GDP growth indicators (q/q-4)

Cyclical indicators for the euro area

Business Climate Indicator stable in November

The **Business Climate Indicator (BCI)** for the euro area slightly decreased by 0.08 points to 0.36. Managers' production expectations and their appraisal of total and export order books worsened markedly; also the current stock of finished products was assessed slightly more negatively. By contrast, managers' assessment of past production remained broadly unchanged.

The **Composite leading indicators (CLIs)** show a stable growth momentum in the OECD area with a mixed outlook for major emerging economies. Stable growth momentum is anticipated in Canada and Japan as well as in the euro area as a whole, including Germany and Italy. In France, the CLI points to firming growth, while the CLIs for the United Kingdom and the United States show a loss of growth momentum, albeit from relatively high levels. Amongst the major emerging economies, tentative signs of stabilisation are emerging in China as well as in Brazil, while firming growth is anticipated in India. In Russia the outlook continues to be for weak growth momentum.

The **IFO Index for the economic climate in the euro area** declined by two index points in the fourth quarter. It dropped to 122.0 points, but still remains significantly above the long-term average. While assessments of the current economic situation brightened slightly, the six-month economic outlook continued to cloud over. The euro area economy continued its recovery at a subdued pace.

Assessments of the current economic situation improved overall, with the exception of Austria, Belgium, Spain, Estonia and Lithuania. There are nevertheless significant differences in levels between member countries. In Slovakia, where assessments brightened considerably compared to last quarter, and in Germany the current economic situation is good. Experts in Greece and Finland, as well as in France, Italy, Spain, Austria, Portugal and Cyprus, by contrast, continued to assess the current economic situation negatively. In most other euro countries the situation is satisfactory.

The six-month economic outlook remains positive in all countries, despite the fact that expectations in several member states were significantly scaled back, especially in France, Portugal and Spain. Experts in Ireland, Italy, Lithuania, and Slovenia, by contrast, are far more optimistic than they were three months ago.

The growth outlook for the next three to five years increased slightly to an annual 1.7 percent from 1.5 percent in the survey at the end of 2014. Experts assess mid-term (2020) inflation expectations for the euro area at 1.9 percent.

The **DZ BANK Euro-Indicator** increased slightly in November to 98.6 points from 98.4 in October. On year-to-year basis, the increase reaches 2.5%. The indicator indicates that the EMU economy is expected to continue its gradual recovery.

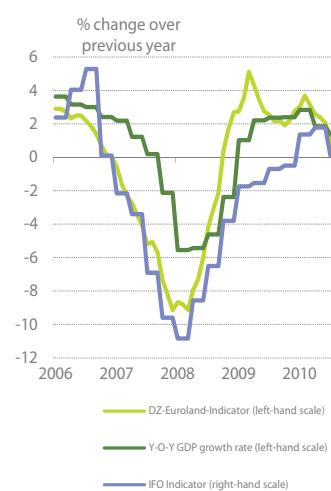

The **IARC turning point indicator** acted a trough in the growth cycle in May. In November, the indicator continued to rise reaching 91.4 after 87.2 in October, announcing the eminence of a peak.

The **start-end recession indicator (IESR)** remains stable near 0, at 2%, confirming there is no sign of recession in the euro area. The current level of the indicator follows the trend embarked on at the end of 2013, after an exit of recession of the euro area mid-2013.

Methodological notes

Indicators of growth and turning points — sources and methods

The EUROFRAME Euro Growth Indicator: calculated by the OFCE (Paris) in cooperation with the EUROFRAME group, which consists of: CPB (Den Haag), DIW (Berlin), ESRI (Dublin), ETLA (Helsinki), IFW (Kiel), NIESR (London), PROMETEIA (Bologna), WIFO (Vienna), and CASE (Poland). The purpose of this leading indicator is to anticipate the development of the GDP in the euro area two quarters ahead of official statistics. The indicator considers surveys from industry, construction, and households, ISM survey of US industry, real euro/dollar exchange rate, and European stock index. The indicator is based on ordinary least squares (OLS) estimation of the GDP growth rate, and released on a monthly basis.

€-COIN: a real-time monthly estimate of euro area GDP growth, computed each month by the Banca d'Italia. It is obtained by collecting a large set of statistics and extracting from it information relevant to forecast future GDP. It tracks GDP growth anticipating official GDP releases by several months, by giving each month an early estimate of euro area growth in terms of quarter-on-quarter changes in GDP. Moreover, it sheds light on the underlying trend by removing short-run fluctuations and measurement errors from the growth rate; in this respect it is not only a forecast, but also an indicator of the true growth momentum in the euro area.

The OECD Composite Leading Indicator: designed to predict cyclical turning points (peaks and troughs) in GDP as a proxy of the business growth cycle of the overall economy. It comprises a set of component series from a wide range of economic indicators.

IFO: Economic Climate Indicator, designed to give an accurate picture of the economic situation and forecasts for economies on a quarterly basis. It consists of qualitative information: appraisals and expectations of economic experts. For the euro area the trend of the indicator correlates well with the actual business-cycle trend.

DG ECFIN: Business Climate Indicator (monthly), designed to deliver a clear and early assessment of the cyclical situation of the euro area. The indicator uses, as input, five balances of opinions from DG ECFIN's Business and Consumer Surveys. The resulting 'common factor' may be read as a survey result: the higher the level, the healthier the cyclical situation, and a rise in the indicator points to an upswing in activity and an improvement in business climate.

DZ-Euroland-Indicator: calculated by DZ Bank (monthly), aims at predicting recessions and has also proved to reflect movements in GDP growth rate. It is built on concepts implemented by the US Conference Board for monitoring cyclical indicators. Nine series for euro area or for the main countries are selected for their leading properties, and aggregated to give a composite index which can be compared with the level of GDP in order to anticipate recessions.

IARC: prepared each month by the French institute ACE - Analyzing Cycles in Economies. It is a monthly indicator aimed at forecasting turning points in the growth cycle. Each month, the probability that each selected series has crossed a turning point is computed. Probabilities are aggregated by a weighting method to give an overall signal of a possible downswing in the next nine months (a value of the indicator higher than 60 and lower than 80), or a very probable downswing in the three coming months (a value higher than 80).

IESR: prepared each month by the French institute ACE - Analyzing Cycles in Economies. It is a coincident indicator able to detect in real time peaks and troughs of the business cycle. It is based on the Markov-Switching model applied to various economic time series. The filtered probabilities are combined by taking into account the risks of false signals in order to provide a recession probability (a value of the indicator higher than 0.5).

Trend-cycle decomposition

The trend and cycle are two components of a time series that represent variations of low frequency and “business cycle” frequency, respectively, the high frequency fluctuations having been filtered out. Identifying and estimating trend and cyclical components of key economic indicators is invaluable when making decisions and informing policy-makers. The distinction between the two components helps the analyst ascertain whether any change to the indicator is temporary or permanent.

However, there exist many alternative methods to identify and estimate trends and (business or deviation) cycles. The estimates for three indicators – GDP, industrial production, and employment – are produced using three different filters:

Hodrick-Prescott (HP): a filter widely used in macroeconomics to fit a smooth curve through a set of points.

Christiano-Fitzgerald (CF): a well-known approximation to an ideal band pass filter, estimated non-parametrically.

Unobserved Components (UC): a parametric approach which involves estimating a statistical model and decomposing the series into components, including the trend and cycle

** "Due to the fact that the Luxembourg Government does not have outstanding long-term debt securities with a residual maturity of close to ten years, the indicator is based on a basket of long-term bonds. This basket has an average residual maturity of close to ten years. The bonds are issued by a private credit institution and the indicator is thus not fully harmonised" source ECB
