

Residence permits issued to non-EU citizens in 2009 for family reunification, employment and education

In 2009, EU Member States issued about 2.3 million new residence permits to third country nationals, i.e. to non-EU citizens, a number that represents a decline of about 0.2 million compared with 2008.

About 660 000 new permits, that is 28.2 % of the EU total, were granted for reasons related to family, 646 000 (27.6 %) for employment and 510 000 (21.8%) for education purposes.

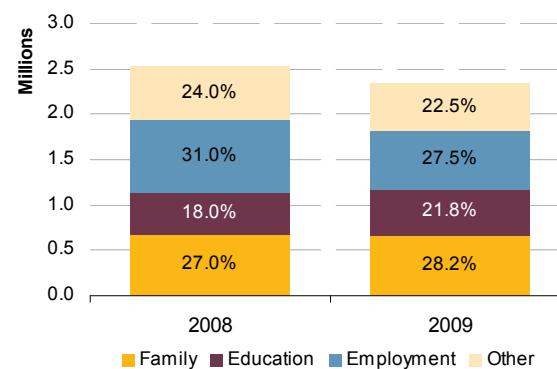

Compared with 2008, the number of new permits issued for employment (which was the main reason in 2008) fell by 142 000. Also the number of permits issued for family reasons fell between 2008 and 2009, but to a lesser extent (-26 000), while permits for education increased by 53 000.

The EU Member State that granted the largest number of permits was the UK (671 000), followed by Italy (507 000), Spain (291 000) and France (193 000). Compared to the size of the resident population, however, the highest relative number of permits was issued by Cyprus (32.0 permits for every 1000 residents).

At EU level, the groups of third country nationals who received the most authorisations to reside in EU Member States were Indians (191 000), followed by US citizens (175 000), Chinese (171 000) and Moroccans (158 000).

The highest number of permits for family reasons was granted to Moroccans (78 000), while the highest number of permits related to education was granted to Chinese (73 000) and the highest number of permits for employment purposes to Indians (65 000).

Figure 1: New residence permits issued in the EU-27 by reasons, 2008 and 2009

Source: Eurostat (online data code: [migr_resfirst](#))

In 2009, the EU Member States granted about 2.3 million new residence permits

About 2.3 million citizens of non-EU countries received an authorisation to reside¹ in the EU Member States in 2009. This represented a decline with respect to the 2.5 million recorded in 2008.

The highest share of permits in 2009 was issued for reasons related to family reunification and formation: 660 000, corresponding to 28.2% of the total. The share of permits granted for employment, including researchers, highly skilled and seasonal workers, was slightly lower: 27.6 % (i.e. 646 000 permits) while that of permits granted for education purposes accounted for 21.8% of the total (i.e. 510 000 permits).

Compared with 2008, in 2009 there was a decline both in the number of permits granted for employment reasons (-142 000) and in the number of permits granted for family reasons (-26 000). On the other hand, there was an increase in the number of permits issued for education purposes (+53 000 in 2009 compared with 2008).

¹ See methodological notes for the definitions applied.

: Data not available; s Eurostat estimate

Source: Eurostat (online data code: [migr_resfirst](#))

The number of new permits issued in 2009 exceeded half a million in the United Kingdom and Italy. These two countries granted 28.6% and 21.6 % respectively of the total permits issued at EU level, followed by Spain (12.4 %), France (8.3%) and Germany (5.2 %).

However, if we consider the ratio between the number of permits issued and the size of the resident population, the highest number of permits was granted by Cyprus (32.0 for 1000 residents), followed by the UK (10.9) and Sweden (9.8).

Focusing on the permits issued at EU level for family reasons (see Table 1), the largest number was granted by Spain, followed by the UK and France. Family reunification and formation was the main reason for issuing residence permits in almost half (12 out of 26) of the Member States for which data are available. In particular, in Austria and Greece they accounted for more than half of all new permits issued.

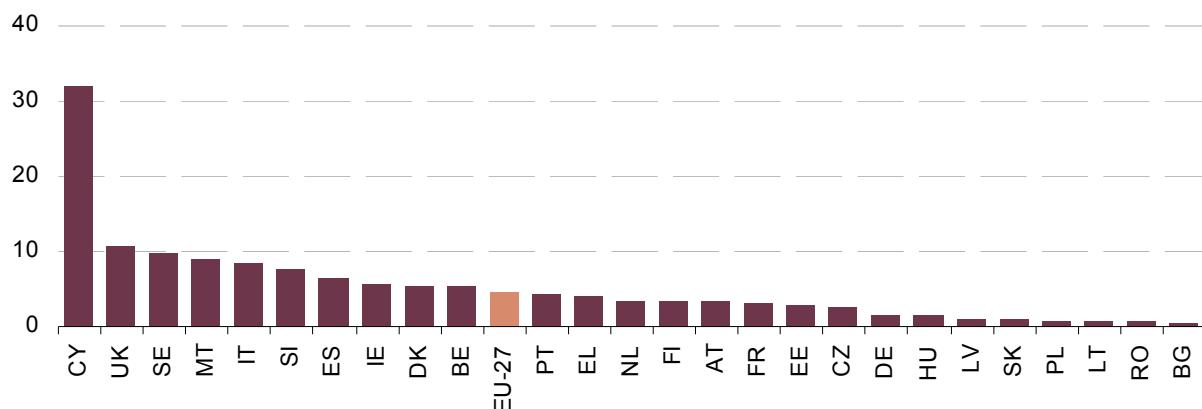

As regards permits granted for education related reasons, the vast majority were issued by the UK, i.e. 269 000 permits representing 52.7 % of all new permits for education in the EU in 2009. Among all permits granted by the UK, those for education represented the relative majority (40.0 %). This

was true also for Denmark (53.7 % of all permits issued by Denmark), Ireland (48.1 %) and Bulgaria (37.0 %). The total number of permits issued for education reasons by these three countries, however, was slightly over 30 000, that is 5.9 % of all new permits for education in the EU.

The majority of permits for employment purposes was granted by Italy (236 000, i.e. 36.5 % of the EU total), followed by the UK (18.1%) and Spain (15.9 %). Permits for employment represented the largest share of all permits issued in 8 Member States: Czech Republic, Italy, Cyprus, Lithuania, Hungary, Poland, Slovenia and Slovakia. In particular, they represented more than 50 % of all new permits issued by Cyprus and Lithuania, and more than 75 % of those issued by Slovenia.

Table 1 also shows the number of new permits issued for reasons other than those related to family, education or employment. Other reasons relate to a miscellaneous group of reasons such as international protection, residence without the right to work (e.g. for pensioners), diplomatic duties, and people in the intermediate stages of a regularisation process. However, a cross-country comparison based on this miscellaneous category is hampered by the differences that exist in the national administrative and legislative systems.

Figure 2: Total new residence permits issued per 1000 inhabitants, 2009

Source: Eurostat (online data codes: [migr_resfirst](#), [demo_pjan](#))

So it is possible to focus the attention wholly on the three main reasons: family, education and employment, and to see whether or not EU Member States exhibit some common patterns in terms of the relative importance of each reason.

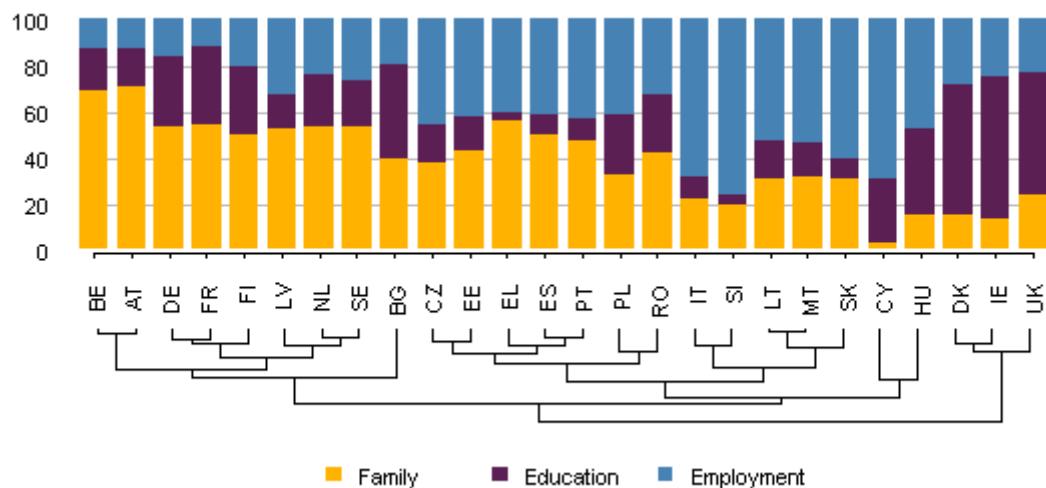

In this respect, the analysis of 2009 data reveals a highly heterogeneous picture among EU Member States. Rather than identifying a limited number of common patterns, a cluster analysis of the relative importance of the three main reasons divides the EU Member States into several small groups (see Figure 3), i.e. countries with:

- a strong predominance of permits for family reasons: Belgium and Austria;
- a relative predominance of permits for family reasons, followed by either education

(Germany, France and Finland) or employment (Latvia, Netherlands and Sweden);

- a joint predominance of permits for family and education (Bulgaria);
- a joint predominance of permits for family and employment (Czech Republic, Estonia, Greece, Spain and Portugal);
- a balanced distribution (Poland and Romania);
- a strong or relative predominance of permits for employment (Italy, Slovenia, Lithuania, Malta and Slovakia);
- a joint predominance of permits for education and employment (Cyprus and Hungary);
- a relative predominance of permits for education (Denmark, Ireland and the UK).

Distribution by citizenship

The highest number of new authorisations to reside in EU Member States in 2009 was granted to citizens of India (191 000), followed by those of the United States (175 000), China (171 000) and Morocco (158 000). These four citizenships accounted for almost 30% of all new permits issued in the EU in 2009.

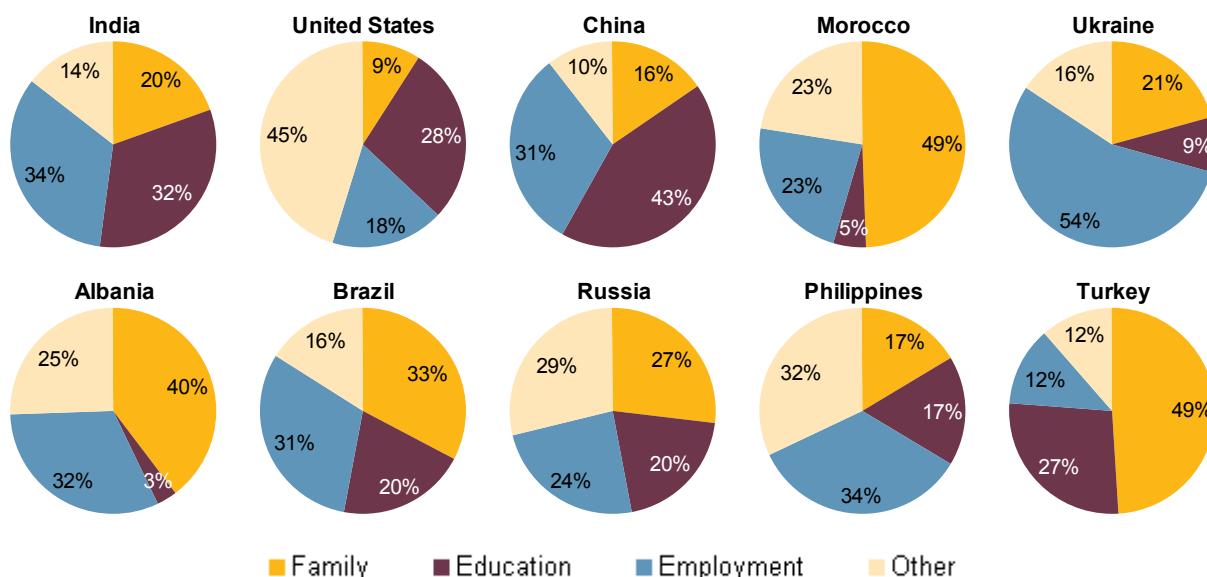

Table 2 presents the list of the ten largest groups of third country nationals receiving a permit in the EU in 2009, together with the four main EU Member States granting the permit.

For most of such groups of citizenship, the relative importance of the main Member States granting the permits depends on a combination of factors which normally influence migration flows, such as:

common language, geographical proximity, historic links and established migrant networks.

Figure 4 shows the distribution by main reason for permits granted to the ten main groups of citizenship reported in Table 2. Permits for family related reasons are relatively predominant among those issued to Moroccans, Albanians and Turks, while permits for employment are relatively predominant for Ukrainians. In the case of Indians and Chinese there is instead a joint predominance of permits for education and employment purposes, while for other groups of citizenship the distribution by reason appear rather balanced.

Table 3 presents the five largest groups of non-EU citizens who were granted a new permit in 2009 in each EU Member State (plus Norway).

In almost half of the countries, the geographical proximity appears to be influencing the main citizenships of persons receiving a new permit. In other countries (like Belgium, Germany, France, Italy, Portugal, Austria, the UK) the largest group of citizenship granted a new permit is among the largest groups of resident foreigners in the receiving country. The existence of an established

migrant network seems to be the predominant driver for such cases.

In general, for most Member States the distribution by citizenship of persons granted a new residence permit was relatively dispersed in 2009. Among the countries in Table 3, in fact, the cumulated share of the five main groups of citizenship exceeded 75 % of the total permits only in six cases: Greece, Portugal, Slovenia and the Baltic States.

Source: Eurostat (online data code: [migr_resfirst](#))

Table 4 presents the main groups of non-EU foreigners receiving a new residence permit, this time separately by reason for the issuance of the permit.

The top group of citizenship granted a new permit is different depending on the reason considered. Moroccans are the largest group receiving a new permit for family reasons (78 000), followed by Indians (38 000) and Albanians (34 000). On the other hand Chinese (73 000), Indians (62 000) and US citizens (49 000) are the largest groups receiving a permit for education purposes, while Indians (65 000), Chinese (54 000) and Ukrainians (48 000) are the largest groups for employment related permits.

Table 4 also shows the top four EU Member States granting permits, for each combination of citizenship group and reason. As regards the new permits issued for education reasons, the UK was

the main EU Member State granting the permit for all top citizenship groups (which is not surprising since the UK issues more than half of all EU education related permits).

For three out of the top-five citizenship groups receiving a new permit for employment, it is instead Italy that is the main receiving country.

For certain groups of citizenship, the relative ranking of the main EU Member States granting new permits varies according to the reason of the permit: for example, most of the Chinese granted education related permits in 2009 received such permits in the UK, whereas most of those received permits for employment purposes were granted permits in Italy. Similarly, in the case of the Turks, it was Germany that issued most family related permits, but it was again the UK that granted most education related permits.

METHODOLOGICAL NOTES

The statistics used for this publication are provided to Eurostat by the national responsible authorities, mainly Ministries of Interior or Immigration Agencies of the EU Member States and EFTA countries. Data are based entirely on relevant administrative sources. These data are supplied by Member States as part of the annual Residence Permits Data Collection conducted by Eurostat according to the provisions of Article 6 of [Council Regulation \(CE\) No 862/2007](#) of 11 July 2007 on statistics on migration and international protection.

Due to the recent implementation of the Residence Permits Data Collection, some methodological and administrative differences exist between the Member States. Namely, data for EE, HU, AT, PL, SK include also renewed permits; data for DE and IE relate only to permits issued for a first time ever; data for FR relate to permits which were issued after at least 12 months since the expiry of the previous permit. No data are available for Luxembourg, Iceland, Liechtenstein and Switzerland.

The UK has not established residence permits register. Statistics are provided by the Home Office and mainly based on passengers given leave to enter the UK in selected categories. For further details see: <http://www.homeoffice.gov.uk/science-research/research-statistics/migration/migration-statistics1/>

GLOSSARY

Residence permit:

Any authorisation valid for at least 3 months issued by the authorities of a Member State allowing a third country national to stay legally on its territory. According to Article 6.2 of the Council Regulation (CE) No 862/2007 of 11 July 2007, when national laws and administrative practices of a Member State allow for specific categories of long-term visa or immigration status to be granted instead of residence permits, such visas and grants of statuses are also included in these statistics.

New permit:

Residence permit issued to a person for the first time. A residence permit is considered as a new permit also if the time gap between the expiry of the old permit and the start of validity of the new permit is at least 6 months, irrespective of the year of issuance of the permit. The convention of new permit relates to permits issued at all levels of administrative / judicial instance (ex.: first instance, appeal, etc.) and by all national authorities.

Third country nationals:

Any person who is not a citizen of the EU, including stateless persons (see Art. 2.1 (i) of the Council Regulation (EC) no 862/2007).

Citizenship:

The particular legal bond between an individual and his or her State, acquired by birth or naturalisation, either by declaration, choice, marriage or other means under national legislation.

Recognised-non-citizen:

Person who is not a citizen of the reporting country nor of any other country, but who has established links to that country including some but not all rights and obligations of full citizenship.

European Statistical Data Support:

With the members of the 'European statistical system', Eurostat has set up a network of support centres in nearly every Member State and in some EFTA countries.

Their role is to provide help and guidance to Internet users of European statistics.

Contact details for this support network can be found on the Eurostat website at:

<http://ec.europa.eu/eurostat/>.

All Eurostat publications can be ordered via the 'EU Bookshop':
