<b>1</b>	<b>Introduction: Objectives, Definitions, Costs and Benefits of Rapid Estimates</b>	<b>17</b>
	<i>by Dominique Ladiray and Gian Luigi Mazzi</i>	
1.1	Introduction	19
1.2	Timeliness improvement and rapid estimates	20
1.3	Aim, scope and limitations of the handbook	21
1.4	Structure of the handbook	22
1.5	Conclusions	23
<b>I</b>	<b>General Aspects</b>	<b>26</b>
<b>2</b>	<b>Rapid Estimates: Different Products for Different Purposes</b>	<b>27</b>
	<i>by Gian Luigi Mazzi and Rosa Ruggeri Cannata</i>	
2.1	Introduction	29
2.2	Relevance of a common terminology	29
2.3	Characterising rapid estimates	30
2.4	Further considerations on rapid estimate types	33
2.4.1	Extrapolation	33
2.4.2	Nowcasting	34
2.4.3	Flash estimates	35
2.4.4	Coincident and leading indicators	36
2.5	Rapid estimates vs. higher frequency estimates	37
2.6	Rapid estimates and user needs	37
2.7	Conclusions	38
	Annex	39
2.A	Glossary of statistical terms associated to the estimation of key economic indicators	39
2.B	A proposal for a common glossary of rapid estimates	40
2.B.1	Introduction	40
2.B.2	Background concepts	41
2.B.3	A complete framework based on eight axes	43
2.B.4	Main definitions	48
2.B.5	Conclusions	50
<b>3</b>	<b>Forecasting and Nowcasting Macroeconomic Variables: A Methodological Overview</b>	<b>53</b>
	<i>by Jennifer Castle, David Hendry and Oleg Kitov</i>	
3.1	Introduction	57
3.1.1	Chapter structure	60
3.2	Nowcasting approaches	60
3.2.1	The 'in-filling' approach	63
3.2.2	Mixed-data sampling models	63

3.2.3	Factor models	64
3.2.4	Factors with ragged edges	65
3.2.5	Bridge equations	66
3.3	Some fundamentals	68
3.4	Explaining forecast failure—and its absence	69
3.4.1	Scalar autoregressive-distributed lag example	71
3.4.2	Understanding these forecast errors	74
3.4.3	Robust forecasting devices	77
3.4.4	Extending robust forecasting devices to $I(1)$	79
3.4.5	Three empirical applications of forecasting	79
3.5	Automatic model selection	82
3.5.1	Autometrics	83
3.5.2	Mis-specification testing	84
3.5.3	Impulse-indicator saturation	84
3.5.4	General case of $N > T$	86
3.6	Producing ‘good’ nowcasts	87
3.6.1	Nowcasting aggregates from disaggregates	88
3.6.2	Common features	90
3.6.3	Using all available information	93
3.6.4	Seasonal adjustment	95
3.6.5	Modeling the disaggregates	95
3.6.6	Nowcasting strategy	96
3.6.7	Some simulation evidence	97
3.6.8	Mis-measured disaggregates and location shifts	98
3.7	Nowcasting UK GDP growth	98
3.7.1	Data	99
3.7.2	Leading indicators	100
3.7.3	Nowcasting methodology	101
3.7.4	Model specifications	103
3.7.5	Vintage models	105
3.7.6	Single-indicator models	106
3.7.7	Augmented models	107
3.7.8	Contemporaneous breaks	110
3.8	Conclusions	110
<b>4</b>	<b>The Trade-Off Between Timeliness and Accuracy: The Perspective of a Statistical Agency by Rosa Ruggeri Cannata and Gian Luigi Mazzi</b>	<b>121</b>
4.1	Introduction	123
4.2	Historical background	124
4.3	Timeliness and policy: The trade-off in the context of policy making	127
4.4	Timeliness, accuracy and the business cycle phases	129
4.5	Big data and the trade-off between timeliness and accuracy	129
4.6	Conclusions	130
<b>II</b>	<b>Statistical and Econometric Techniques for Rapid Estimates</b>	<b>134</b>
<b>5</b>	<b>An Overview of Modelling Techniques for Rapid Estimates by Dominique Ladiray, Gian Luigi Mazzi and Riccardo Gatto</b>	<b>135</b>
5.1	Introduction	139
5.2	Methods based on univariate time series analysis: brief review and notation	140
5.2.1	Data transformation	140

5.2.2	Autocorrelation Function (ACF) and Partial Autocorrelation Function (PACF)	142
5.2.3	Periodogram: useful for frequency or cyclical analysis	143
5.2.4	Plot of a single or set of aggregate or indicator series	144
5.2.5	Trend stationary (TS) vs. Difference Stationarity (DS)	147
5.2.6	Seasonally adjusted vs. seasonally unadjusted data	148
5.2.7	Most relevant univariate time series models	148
5.3	Rapid Estimates based on Factor Models	150
5.3.1	Data Selection	150
5.3.2	The Blake, Kapetanios and Weale two-stage approach	151
5.3.3	Data reduction: factor analysis	151
5.4	Rapid estimates based on regression models	153
5.4.1	Static and dynamic models	154
5.4.2	Long-run component	155
5.4.3	Spurious regression	156
5.4.4	Autoregressive Distributed Lags Model (ADL)	157
5.4.5	Cointegration	157
5.4.6	Error Correction Model (ECM)	158
5.4.7	Regression with ARIMA errors: RegARIMA	159
5.4.8	ARMA models with exogenous inputs: ARMAX	160
5.5	Rapid Estimates Based on Multivariate time series models	160
5.5.1	Vector Autoregressive (VAR) models	160
5.5.2	Vector Error Correction Models (VECM)	161
5.5.3	Global VAR (GVAR)	163
5.6	Rapid estimates models based on data available at different frequencies	165
5.6.1	Temporal disaggregation methods	165
5.6.2	Mixed frequency models	168
5.7	Dealing with competing rapid estimate models	169
5.7.1	Combining Forecasts	169
5.8	Rapid Estimates based on available survey data	170
5.8.1	Non-parametric models	170
5.8.2	Super population models	171
5.8.3	Linear dynamic models using state-space form	173
5.9	Statistical measures and tests for rapid estimates	174
5.9.1	Introduction	174
5.9.2	Stationarity tests	174
5.9.3	Tests on the autocorrelation function	175
5.9.4	Seasonality tests	176
5.9.5	Information criteria (AIC, BIC)	179
5.9.6	Granger causality test	179
5.9.7	Evaluating the quality of a regression model	180
5.9.8	Johansen cointegration test	180
5.9.9	Chow inequality test	181
5.9.10	Forecast accuracy measures and tests	182
5.9.11	Encompassing tests for discriminating two competitive models	183
<b>6</b>	<b>A Review of Parametric and Non-parametric Techniques for Variable Selection</b>	
	<i>by Dominique Ladiray and George Kapetanios</i>	<b>191</b>
6.1	Introduction	193
6.2	Statistical Framework and Notations	193
6.3	Reduced Regression Methods	196
6.3.1	Subset Selection	196
6.3.2	Shrinkage Methods	198

6.3.3	Boosting	201
6.4	Data reduction methods	202
6.4.1	Principal Components and Factor Augmented Regressions	202
6.4.2	Partial Least Squares Regression	203
6.4.3	Cluster Analysis	204
<b>7</b>	<b>Model Selection, Model Specifications and a Typology of Rapid Estimates</b> <i>by Dominique Ladiray, James Mitchell and Fabbio Bacchini</i>	<b>209</b>
7.1	Introduction	211
7.2	Flash estimation	211
7.2.1	Regression-based production of flash estimates	212
7.2.2	Temporal disaggregation based production of flash estimates	214
7.3	Nowcasting	215
7.3.1	Factor models	215
7.3.2	MIDAS	216
7.3.3	Tests for model comparison	216
7.3.4	Combination and rolling regressions	216
7.3.5	Uncertainty and Instabilities	217
7.4	Practical empirical advice	217
7.4.1	Why Euro area GDP - and which measure of Euro area GDP?	217
7.4.2	Timeliness	217
7.4.3	Flash estimate or nowcast?	218
7.4.4	Likely indicators for GDP	219
7.4.5	Do we have to transform the data?	222
7.4.6	When should we reduce the number of indicators?	224
7.4.7	What is a 'good' model for the production of rapid estimates?	224
<b>III</b>	<b>Rapid Estimates based on Data Available at Different Frequencies</b>	<b>230</b>
<b>8</b>	<b>Multivariate Temporal Disaggregation</b> <i>by Gian Luigi Mazzi and Tommaso Proietti</i>	<b>231</b>
8.1	Introduction	233
8.2	A review of the existing methods	234
8.2.1	A unified approach to multivariate temporal disaggregation	235
8.2.2	Binding constraints and reparameterisations	236
8.2.3	The BLUE approach	237
8.3	Observation driven models	237
8.3.1	Multivariate extension of the Chow-Lin method	238
8.3.2	The Multivariate Random Walk Model	238
8.3.3	The Multivariate Integrated Random Walk model	239
8.4	Multivariate structural (parameter driven) methods	239
8.4.1	The state space methodology	240
8.4.2	Temporal disaggregation using multivariate structural time series models	240
8.4.3	Multivariate disaggregation by dynamic factor models	241
8.5	Chain-linking and contemporaneous aggregation constraints	243
8.6	Conclusions	246
<b>9</b>	<b>A Survey of Econometric Methods for Mixed-Frequency Data</b> <i>by Claudia Foroni and Massimiliano Marcellino</i>	<b>251</b>
9.1	Introduction	253
9.2	Models for mixed-frequency data	253

9.2.1	Aggregation and interpolation	254
9.2.2	Bridge equations	255
9.2.3	Mixed-Data Sampling	255
9.2.4	Mixed-frequency VAR	261
9.2.5	Mixed-frequency factor models	263
9.3	Ragged-edge data	268
9.3.1	Estimating the MF-VAR with missing observations	268
9.3.2	Estimating the factors with ragged-edge data	269
9.4	A comparison of the different methods	271
9.5	An overview of empirical studies	272
9.5.1	Bridge equations	272
9.5.2	MIDAS models	273
9.5.3	Mixed-frequency VAR models	274
9.5.4	Factor models	276
9.6	Conclusions	279
<b>IV</b>	<b>Rapid Estimates based on Factor Models</b>	<b>286</b>
<b>10</b>	<b>Dynamic Factor Models: A Review of the Literature</b>	
	<i>by Karim Barhoumi, Olivier Darné and Laurent Ferrara</i>	<b>287</b>
10.1	Introduction	289
10.2	Factor models for a small number of variables (small $N$ )	290
10.2.1	Static factor models (SFM)	290
10.2.2	Exact or strict dynamic factor models (DFM)	291
10.2.3	Recent extensions of factor models with small $N$	294
10.3	Approximate factor models (large $N$ )	296
10.3.1	Approximate static factor models (SFM)	296
10.3.2	Approximate dynamic factor models (DFM)	297
10.3.3	Recent extensions of approximate factor models	298
10.4	Estimation of factor models for large $N$	300
10.4.1	Static factor models: the Stock and Watson (2002) approach	300
10.4.2	Dynamic factor models	301
10.5	Selection of the number of factors	304
10.5.1	Selection of the number of factors for static factor models	304
10.5.2	Selection of the number of factors for dynamic factor models	306
10.6	Recent results in the empirical literature	308
10.6.1	Tools for short-term economic monitoring	308
10.6.2	Macroeconomic forecasting	310
10.6.3	Applications in monetary policy and the international economy	312
10.7	Conclusion	313
<b>11</b>	<b>Forecasting with Rich Data: Model Comparison and Evidence from European Countries</b>	
	<i>by George Kapetanios, Gian Luigi Mazzi and Katerina Petrova</i>	<b>321</b>
11.1	Introduction	323
11.2	Methods for Data-Rich Macroeconomic Forecasting	324
11.2.1	Factor Methods	324
11.2.2	Partial Least Squares Regression	326
11.2.3	Bayesian (Shrinkage) Regression	327
11.2.4	A Comparison of the Methods	327
11.3	Forecasting GDP growth and Inflation in Euro Countries	328
11.3.1	Data	328

11.3.2 Models	328
11.3.3 Results	329
11.4 Conclusion	330
Annex	331
11.A Model Comparison Results	331
11.A.1 Eurozone	331
11.A.2 France	332
11.A.3 Italy	333
11.A.4 Germany	334
11.A.5 UK	335
11.B Data Description	336
11.B.1 Medium-Sized Models	336
11.B.2 Large-Sized Models	338
<b>V Rapid Estimates based on Combining Forecasting Techniques</b>	<b>348</b>
<b>12 Combined Forecasting Methods and Rapid Estimates</b>	
<i>by Massimiliano Marcellino</i>	<b>349</b>
12.1 Introduction	351
12.2 An overview of forecast combination	352
12.2.1 The problem of forecast combination	352
12.2.2 Linear forecast combination	352
12.2.3 Estimation of the combination weights	354
12.2.4 Large $N$ forecast combining methods	355
12.2.5 Time-varying parameter weights and non-linear combination methods	356
12.2.6 Other forecast combination methods	358
12.2.7 Empirical analyses	360
12.3 Combined forecasting methods in practice	362
12.3.1 The data	363
12.3.2 The forecasting methods	363
12.3.3 Forecast Evaluation	367
12.3.4 Empirical results for monthly PEEIs	368
12.3.5 Empirical results for quarterly PEEIs	371
12.4 Conclusions	372
<b>13 Combining Forecasting Techniques: Some Empirical Considerations</b>	
<i>by Françoise Charpin and Gian Luigi Mazzi</i>	<b>377</b>
13.1 Introduction	379
13.2 Theory of Forecast Combination	379
13.2.1 Combining two unbiased Forecasts	379
13.2.2 Combining $k$ unbiased forecasts	381
13.2.3 An alternative presentation within the regression framework	383
13.2.4 Bias correction in the optimisation framework	385
13.2.5 Further Extensions	386
13.2.6 Methods based on factor structures	386
13.2.7 Forecast encompassing test	388
13.3 Combination of real time forecasts in practice	390
13.3.1 The cases of the euro area GDP and IPI	390
13.3.2 Forecasting models of the quarterly GDP growth rate	390
13.3.3 Evaluation and combination of forecasts (the GDP case)	393
13.3.4 Forecasting models of the monthly IPI growth rate	396

13.3.5	Evaluation and combination of forecasts (the IPI case)	396
13.3.6	Conclusion	399
<b>14</b>	<b>Combined Nowcasts</b>	
	<i>by Silvia Lui and James Mitchell</i>	<b>403</b>
14.1	Introduction	405
14.2	Applications to Five PEEIs	405
14.2.1	Methodology for FLASH estimation: a review	406
14.2.2	Recursive simulations for the first four PEEIs	409
14.2.3	Real-time application to GDP growth using EUROIND database	416
14.3	Conclusion	420
<b>VI</b>	<b>Aggregate versus Disaggregate Approaches to Constructing Rapid Estimates</b>	<b>424</b>
<b>15</b>	<b>Aggregate versus Disaggregate Approaches to Constructing Rapid Estimates</b>	
	<i>by Silvia Lui, Gian Luigi Mazzi and James Mitchell</i>	<b>425</b>
15.1	Introduction	427
15.2	The relationship	428
15.2.1	Equivalence between the aggregate, disaggregate and multivariate approaches	430
15.3	Approximations to the multivariate model	431
15.3.1	Factor models	431
15.3.2	Global VAR model	432
15.3.3	Mixed model: using disaggregate information in the aggregate model	433
15.4	Application: Nowcasting Euro area GDP growth	435
15.4.1	Aggregate and disaggregate indicator variables	436
15.4.2	Real-time simulation exercise	437
15.4.3	Nowcasting results	438
15.5	Conclusion	441
<b>VII</b>	<b>Big Data and Rapid Estimates</b>	<b>448</b>
<b>16</b>	<b>The Challenge of Big Data</b>	
	<i>by Dario Buono, George Kapetanios, Massimiliano Marcellino, Gian Luigi Mazzi and Fotis Papailias</i>	<b>449</b>
16.1	Introduction	451
16.2	Big Data types	451
16.2.1	Big Data types: “Tall”	452
16.2.2	Big Data types: “Fat”	452
16.2.3	Big Data types: “Huge”	452
16.3	Pros and Cons of Big Data for Macroeconomic Nowcasting	453
16.3.1	Big Data issues	453
16.3.2	Big Data advantages	454
16.4	Literature Review	454
16.5	Big Data modelling	456
16.6	Empirical Analysis	457
16.7	Conclusions	461
<b>17</b>	<b>Guidance and Recommendations on the Use of Big data for Macroeconomic Nowcasting</b>	
	<i>by George Kapetanios, Massimiliano Marcellino and Fotis Papailias</i>	<b>463</b>
17.1	Introduction	465
17.2	A step-by-step approach	465

17.2.1	Step 1: Big Data usefulness within a nowcasting exercise	465
17.2.2	Step 2: Big Data search	466
17.2.3	Step 3: Assessment of big-data accessibility and quality	467
17.2.4	Step 4: Big data preparation	468
17.2.5	Step 5: Designing a Big Data modelling strategy	469
17.2.6	Step 6: Results evaluation of Big Data based nowcasting	472
17.2.7	Step 7: Implementation of big data based nowcasting	473
17.3	Conclusions	474
<b>VIII</b>	<b>Constructing and Evaluating Rapid Estimates</b>	<b>480</b>
<b>18</b>	<b>Evaluating Rapid Estimates</b>	
	<i>by Dominique Ladiray and Gian Luigi Mazzi</i>	<b>481</b>
18.1	Introduction	483
18.2	The model should be interpretable	483
18.3	The model should be specified correctly	483
18.3.1	Timeliness	483
18.3.2	Statistical tests	484
18.4	The model should be stable and give unbiased forecasts	484
18.5	The model should give good forecasts	485
18.5.1	Real-time estimation	485
18.5.2	Comparing 2 models: the Diebold-Mariano statistics	485
18.5.3	Density forecasts	486
18.6	The model or the model(s)?	486
18.7	Conclusions	487
<b>19</b>	<b>Guidelines for the Construction of Rapid Estimates</b>	
	<i>by Gian Luigi Mazzi and Rosa Ruggeri Cannata</i>	<b>491</b>
19.1	Introduction	493
19.1.1	Motivation for the guidelines	493
19.1.2	Scope of the guidelines	493
19.1.3	Advantages and drawbacks	494
19.1.4	Principles for the compilation of rapid estimates	494
19.2	General aspects	496
19.2.1	A general policy for the compilation of rapid estimates	496
19.3	Domain specific policies for rapid estimates	497
19.3.1	Stability of general and domain specific policies	498
19.3.2	Quality assurance framework for rapid estimates	499
19.4	Data issues	500
19.4.1	Input data availability and quality	500
19.4.2	Real-time vintages	501
19.4.3	Variable selection	502
19.5	Flash estimates	503
19.5.1	The dataset	503
19.5.2	The timing	504
19.5.3	Methodology	505
19.6	Nowcasting	506
19.6.1	The dataset	506
19.6.2	The timing	507
19.6.3	The methodology	508
19.7	Advanced estimates	509

19.7.1	The dataset	509
19.7.2	The timing	510
19.7.3	The methodology	511
19.8	Dissemination and presentation	512
19.8.1	Labelling of rapid estimates	512
19.8.2	Data presentation	513
19.8.3	Documentation of rapid estimates	514
19.8.4	Uncertainty and rapid estimates	515
