## 1. Introduction

Patent documents are one of the most comprehensive data sources on technology development. As such, they provide a unique source of information to analyze and monitor technological performance. Although technology indicators based on patent documents have certain limitations<sup>1</sup>, Griliches' observation of almost two decades ago still seems to hold: "*In spite of all the difficulties, patent statistics remain a unique resource for the analysis of the process of technical change. Nothing else even comes close in the quantity of available data, accessibility, and the potential industrial, organizational and technological detail.*" (Griliches, 1990). Patent indicators are now used by companies and by policy and government agencies<sup>2</sup> alike to assess technological progress on the level of regions, countries, domains<sup>3</sup>, and even specific entities such as companies, universities and individual inventors.

In addition, from the mid-1980s onwards, a broader conception of the dynamics underlying innovative performance, synthesized by the concept of the 'innovation system', has emerged (e.g. Freeman, 1987; Lundvall, 1992; Nelson, 1993, Nelson and Rosenberg, 1993). This concept sees innovative performance on the level of regions, nations or industries as driven by industrial innovative activity and the pursuit of scientific excellence, both of which are influenced and shaped by institutional frameworks. Moreover, interaction among different institutional actors is advanced as a further explanation for differences in technological and innovative performance. These interactions are seen as critical in the process of knowledge generation and diffusion on a national, regional and industrial level.

A corollary of this conception of innovation dynamics is the need for refinements in patent indicators. Sector assignment - i.e. identifying whether patentees are companies (private business enterprise), universities and higher education institutions, or governmental agencies - thus becomes a necessary condition for further analysis of the dynamics underlying technological performance. Within the framework of the PATSTAT Task Force on Harmonized Patent Statistics, efforts have been launched to produce an exhaustive sector assignment taxonomy. EUROSTAT has invited experts from K.U.Leuven to develop such a methodology.

In this paper, the methodology that we have developed will be outlined and made fully transparent. It will be shown that the methodology proposed is effective both in terms of completeness (over 99% of the patent volume of both USPTO and EPO are assigned to discrete categories) and accuracy (99% of the assigned codes reflect the category correctly). At the same time, further improvements are considered both feasible and relevant. In order to ensure that such improvements are put into effect, EUROSTAT and its development partners (K.U.Leuven and SOGETI) have deliberately chosen to put the methodology into the public domain. This action is, in effect, an invitation to researchers and analysts to further build on the methodology and to improve it where feasible. When informed about such improvements, EUROSTAT and its partners will ensure that updates and refinements of the methodology as a whole are made available to the wider public.

The paper is structured as follows: in the following section, we first highlight previous efforts to arrive at an exhaustive sector assignment of patentee names. This overview leads to the conclusion that additional development efforts are indeed relevant. In Section 3, we outline the principles followed in developing the methodology, and we present the outcomes obtained. This will allow us to draw conclusions on performance and to delineate avenues for further improvement in the methodology, in Section 4.

<sup>1</sup> Propensities to patent differ among industries, firms and countries.

<sup>2</sup> Patent indicators are now to be found in recurrent publications of the National Science Foundation (US), the European Commission (Science and Technology Indicator Reports) and the OECD alike.

<sup>3</sup> Analysis by domains is feasible by using the WIPO International Patent Classification or aggregation schemas like the 'Systematic of OST/INPI/FhG ISI of 5 technology areas and 30 sub-areas'; analysis in relation to industries is enabled by concordance schemes based on patent classification, like the MERIT concordance table (Verspagen, 1994), the OECD Technology Concordance (Johnson, 2002), or the EC DG Research and FhG ISI/OST/SPRU concordance table (Schmoch, Laville, Patel, Frietsch, 2003).

## 2. Existing Sector Typologies

EUROSTAT aims to allocate one of the following sectors to each patentee: (a) individual (private) applicant (b) private business enterprise (c) government (agency) (d) university/higher education (e) private non-profit. This classification shows similarities with the existing sector classification developed by OECD in the context of conducting surveys on research and development, as outlined in the Frascati manual (2002).

The Frascati manual builds on the classification of the System of National Accounts (SNA). This system distinguishes between the following sectors: non-financial corporations, financial corporations, general government and non-profit institutions serving households, and households. In the OECD Frascati Manual (2002), largely based on the SNA 1993, higher education has been designated as a separate sector, and households are considered part of the private non-profit sector. Five sectors are identified in the Frascati Manual:

### (1) Business enterprise

*Includes: (a) all firms, organizations and institutions with the primary activity of the production of goods or services for sale to the general public, (b) the private non-profit institutions mainly serving them. The core of this sector is made up of private enterprises. Additionally, this sector includes public enterprises and non-profit institutions that are market producers of goods and services other than higher education. Examples of these non-profit institutions include: research institutes, clinics, hospitals, private medical practitioners, chambers of commerce, and agricultural, manufacturing or trade associations.*

### (2) Government

*The government sector is composed of all departments, offices and other administrative bodies which do not normally sell to the community, as well as those that administer the state and the economic and social policy of the community. Non-profit organizations controlled and mainly financed by government but not administered by the higher education sector are also included in this sector. Furthermore, units associated with the higher education sector but mainly serving the government sector should also be included in the government sector.*

### (3) Private non-profit

*This sector includes private non-profit institutions serving the general public and private individuals or households.*

*The following types of private non-profit institution should not be included in this sector:*

*Those mainly rendering services to enterprises*

*Those primarily serving government*

*Those entirely or mainly financed and controlled by government*

*Those offering higher education services or those controlled by higher education institutions.*

### (4) Higher education

*The higher education sector includes all universities, colleges of technology and other institutions providing post-secondary education, irrespective of their source of finance or legal status. Research institutes, laboratories and clinics operating under the direct control of, administered by, or associated with higher education institutions should also be included in this sector.*

### (5) Abroad

*This sector consists of all institutions and individuals located outside the political borders of a country and all international organizations including facilities and operations within the country's borders.*

It should be noted that individual (private) applicants do not show up as a separate category in the Frascati classification; in addition, the 'Abroad' category carries little relevance when classifying patentee names. Finally, whilst the definition of categories is generally clear and precise, the matching of name characteristics to the

different categories is not clear-cut for certain types of organization. For instance, hospitals could be classified as either ‘business enterprise’, ‘private non-profit’ or ‘higher education’ depending on the governance mode under which they operate. As demonstrated later in this paper, the sector in which a given organization should be classified is not always clear from looking solely at name field information found in the patent system. There is also the problem of a given institution being allocated to two sectors, e.g. when different objectives are being pursued by one and the same organization.

#### *Overview of approaches for sector allocation*

Broadly speaking, one can make a distinction between two approaches for assigning sector codes. The first option involves building further on existing efforts and classification schemes that already make a distinction between different types of actor, and refining them so that they correspond to the targeted classification. The second option consists of developing ‘bottom-up’ methods to assign applicants to different categories. Given the amount of effort required to assign all applicants to categories from scratch, the first option is clearly preferable.

The most exhaustive effort to allocate patentees to different sectors has been undertaken within the framework of the USPTO system. As the USPTO patent system already allocates assignees to different categories, this classification provides the obvious starting point to further develop a sector classification. It should be noted that a similar codification does not exist in the EPO database. Nevertheless, if the USPTO classification proves to be relevant and accurate, the sector information available in the USPTO system could be related to the EPO database using harmonized names. The NBER patent citation data file (Hall et al, 2001, Jaffe and Trajtenberg, 2002) also classifies USPTO assignees into sectors. A closer inspection of the NBER sectors reveals that the same classification as the USPTO database system is used.

Hence, the first exercise conducted to develop an appropriate sector assignment method is related to assessing the accuracy and relevancy of the existing USPTO sector classification. We used a sample of patent assignees from USPTO to validate the sector classification of the USPTO. The USPTO assignee table provides information on all the assignees for each of the granted USPTO patents in the USPTO dataset. For each assignee, the USPTO has provided an organizational type code: namely, US company (2 or 12<sup>4</sup>), foreign company (3 or 13), US individual (4 or 14), foreign individual (5 or 15), US government (6 or 16), foreign government (7 or 17), county government (8 or 18), and state government (9 or 19). It should be noted that this classification does not coincide with the target categories: Universities and Private Non-Profit sector categories are missing.

To validate whether the organizational types allocated to the assignees by the USPTO are correct, we assessed a sample of 500 assignees for each organizational type. As the total number of patentees with sector codes 8 and 9 did not exceed 500, all assignees in these two categories have been validated. Table 1 provides a summary of the findings.

*Table 1: Validation of assignee types given in the USPTO patent database*

<b>Assignee Types</b>	<b>Number of Assignees Incorrectly Assigned to Assignee Type*</b>	<b>Number of Patents Incorrectly Assigned*</b>
2. US Company	65/500 (13 %)	7 419 (4.5 %)
3. Foreign Company	70/500 (14 %)	6 948 (4.6 %)
4. US Individual	0/500 (0 %)	0 (0 %)
5. Foreign Individual	21/500 (4 %)	72 (7.2 %)
6. US Government	39/500 (8 %)	60 (0.4 %)
7. Foreign Government	48/500 (10 %)	96 (6.4 %)
8. County Government	5/9 (56 %)	5 (56 %)
9. State Government	30/42 (71 %)	56 (68 %)

\* The percentage for the sample analyzed is given in parenthesis.

<sup>4</sup> The number one in front of the code identifies part interest.

---

As Table 1 demonstrates, the existing sector allocation has certain shortcomings. Although the ‘individual (private) applicant’, ‘private business enterprise’, and ‘government’ sectors are present, the ‘university/higher education’ and ‘private non-profit’ sectors are not included. In addition, the existing allocation of assignees to organizational types includes a considerable level of error, except in the case of ‘US individuals’. Moreover, the following issues merit our attention:

In the existing USPTO classification, organizations such as hospitals, higher education, and private non-profit organizations do not have a unique code to identify them. In the sample, universities and hospitals are usually given the types 2 or 3 to identify US and foreign universities/hospitals respectively. It should be noted that a separate list for US universities, developed independently from this categorization, is available at USPTO. A similar list is not, however, available for foreign universities.

- Institutes (public/non-profit) are mostly assigned types 2 and 3 for US and foreign institutes respectively but are also found in categories 6 and 7; the criteria used to arrive at these classifications remain unclear. (Battelle Memorial Institute –type 2; Florida Institute of Phosphate Research – type 2; Institut National De La Recherche Agronomique – type 3; Fruit Tree Research Station, Ministry Of Agriculture, Forestry And Fisheries – type 3; Institut National De La Sante Et De La Recherche Medicale (INSERM) – type 6; Commissariat A L'energie Atomique – type 6; Stichting Rega Vzw – type 7; Hadassitmedical Research Serv. & Devel. LTD. – type 7)

- Having observed that several sectors are in need of refinement and that some categories need to be developed in their entirety, we decided to adopt a different approach. In this approach, a set of rules will be developed that relates relevant information from the name field of patentees to specific sector categories. In applying this logic to the full patentee list as identified in the USPTO and EPO patent system, it is evident that different types of rules are needed; besides more generic rules that relate several patentees to one sector, a set of rules will be required targeted at specific organizations. In addition, conditionality will be introduced to minimize the number of multiple sector assignments. Without case-based allocation criteria and conditionality, accuracy as well as completeness will be negatively affected. 'Completeness' refers to the extent to which the sector allocation methodology is able to assign all patentees to a discrete category. 'Accuracy' refers to the extent to which the sector allocation correctly identifies the actual status of the patentee.

### 3. Methodology

Developing such a methodology with a comprehensive set of rules is a highly iterative process in which it is eminently desirable to work on the full set of assignee names in order to adequately assess the impact of discrete rules. Accordingly, development and production efforts tend to coincide. In order to develop the methodology, we combined the patentee list from USPTO and EPO (1978-2003, EPO; 1991 – 2003 USPTO). In consequence, the methodology will reflect the particularities of the underlying database.

Whilst the overall logic strives for a maximum number of rules that follow logically from information found in the name fields of the patent database, concerns about completeness and accuracy point to the need for assessment and a certain level of expert involvement. In some cases, the category to which an organization belongs is not clear from the patentee information alone because the name gives no real indication. In addition, some categories where the governance mode is crucial for sector allocation pose specific challenges, as in the case of hospitals, which can be private business sector, university/higher education, government or private non-profit. Equally, additional information would be required on whether certain research organizations funded by government are administered by the Ministry of Education, in which case they would fall within the University/Higher Education sector. Finally, there are cases where clues found in the name fields result in multiple sector allocations. Such cases will require a specific assessment resulting in case-based decision criteria. Depending on the desired levels of accuracy and completeness, additional data verification efforts could become considerable.

Within the framework of the development of this methodology, we targeted levels of completeness and accuracy of 99%. This means that in applying all rule-based and case-based criteria to the patentee list, 99% of all patents<sup>5</sup> must be assigned to just one sector, with a degree of error of less than 1%.

---

<sup>5</sup> Levels of accuracy and completeness have been assessed on patent volume coinciding with allocated patentees. As the majority of patentees hold only one patent, striving for accuracy and completeness on the level of patentee would involve considerable additional resources, mainly for verification purposes.

---

### 3.1 Methodology

The first principle underlying the methodology is straightforward; maximize the number of generic rules that can translate clues found in patentee names into the proper sector code. This rule-based logic works on the assumption that information found in the patentee names can provide clues to ‘sector’ membership. Such clues can be parts of names, specific words (e.g. government) and/or terms signaling specific legal forms (Inc.). If such clues can be identified in a systematic manner, they can be integrated into one script, which in itself allows for an automated allocation of sector codes. From an efficiency point of view, such an approach is clearly preferable but it implies several assumptions. First of all, a sufficient number of patentee names should include such clues. Secondly, one-to-one relationships between clues and specific sector codes are preferable. Finally, a single name should only contain clues pertaining to one specific sector code. As the following sections demonstrate, several cases do not meet these ideal criteria. In order to remedy this situation, additional principles have been introduced. For patentees characterized by larger patent portfolios and for which generic rules do not result in an assignment, sectors are allocated on the basis of case-by-case decisions. Moreover, validation efforts – applied throughout the process – reveal that generic rules generate occasional errors and assign certain patentees to the wrong sector (e.g. GMBH is often found in association with companies, but not always). For assignees with more than three patents validation efforts have been undertaken, resulting in the development of an extensive set of additional *case oriented rules*. A final principle has been introduced in order to address the occurrence of multiple sector assignment. Again, for patentees with more than five patents *conditional rules*<sup>6</sup> have been developed that result in a proper allocation of specific names (E.g. a patentee name has the words University, Foundation and a company legal form eg. LTD. The sector codes 2, 4 and 6 are allocated to the name (Georgia State University Research Foundation, INC.). This is corrected by the conditional rule: if University and Foundation are both in the patentee name then the sector code 4 should be given; \*City Of Hope Research Institute\* received sector code 3 and 6 correct code is 4 therefore a conditional rule was added to correct for this incorrect double sector code assignment; \*Carl Zeiss Stiftung Trading As Schott Glaswerke\* received codes 2 and 6 with a conditional rule code 2 was assigned).

---

<sup>6</sup> See Step 8 of appendix one.

Figure 1: Diagram of the methodology used to assign sector codes to assignees patentees.

An exercise of this nature is time consuming since it involves an assessment based on secondary sources (mostly web searches); however, it is feasible within a limited time frame, if an exhaustive allocation result (100%) is not required. Figure 1 presents a diagrammatic summary of the approach followed in allocating sector codes to patentee names. The starting point is an initial list of keywords that are considered indicative of a certain category in the sector classification. Table 2 provides a sample of the keywords used for each sector.

*Table 2 Examples of keywords/clues used to identify patentee sectors<sup>7</sup>*

Sector	Keywords
(1) Individual	“*DIPL.-ING.*”; “*PROF.*”; “*DR.*”; “*DECÉDÉ*”; “*DECEASED*”; “*DIPL. ING.*”; “*PH.D*”; “*DIPL.-GEOGR.*”; “*ING.*”; “*ÉPOUSE *”
(2) Private Enterprise	“* SA *”; “*S.R.L*”; “*HANDELSBOLAGET*”; “*INC.”; “*LTD.”; “*S.A.R.L”; “* BVBA *”; “*S.P.R.L.”; “*NAAMLOZE VENNOOTSCHAP*”; “*AKTIEBOLAG*”
(3) University	“*UNIVERSI*”; “*UNIV.*”; “*COLLEGE*”; “*SCHOOL*”; “*REGEN-TS*”; “*ECOLE*”; “*FACULTE*”; “*SCHULE*”; “*UNIVERISTY*”; “*UNIVERSTIY*”
(4) Hospital	“*HOSPITAL*”; “*MEDICAL CENTER*”; “*MEDICAL CENTRE*”; “*ZIEKENHUIS*”; “*CLINIQUE*”; “*NOSOCOMIO*”; “*CLINICA*”; “*POLICLINICA*”; “*HOPITAL*”; “*HOPITAUX*”
(5) Public and Private Non-Profit	“*GOUVERNEMENT*”; “* MINISTRO*”; “*INSTIT*”; “*INSTYTUT*”; “*FONDATION*”; “*FOUNDATION*”; “*CHURCH*”; “*TRUST*”; “*KENKYUSHO*”; “*STIFTUNG*”

These keywords/clues are applied to the full list of unique patentee names. In this exercise, the combination of patentee names from the USPTO (patents granted between 1 January 1991 and 20 April 2004) and EPO (patent applications between 1 June 1978 and 4 September 2003) databases resulted in a total dataset of 439,523 patentee names of which 254,537 are derived from EPO and 235,135 from USPTO. The total volume of patents related to these patentees amounts to 1,484,108 for EPO and 1,666,897 for USPTO.

Patentees are assigned to the following seven sectors: (1) individuals; (2) private enterprises; (3) government; (4) university; (5) hospital; (6) research institutes; (7) non-profit. This – more disaggregate - classification is more suited to the rule-based methodology adopted here. In a subsequent step, these different categories can then be aggregated in accordance with the reporting objectives sought. However, as will become clear, even this approach will not produce a straightforward sector assignment as found in the Frascati manual. Problems increase when considering whether hospitals and research organizations (although clearly identifiable as such, in most cases) should be included in the government, private business enterprise, or private non-profit sectors depending on the organization's funding and governance. Sufficient levels of accuracy, within each category, will only be achieved by engaging in extended validation efforts based on secondary sources. In other words, the name alone does not reveal sufficient clues to arrive at a sector allocation, with sufficient levels of accuracy, for the majority of patentees in these categories. For this reason, analyzing information on establishment, funding and governance is needed in order to assign patentees correctly, as the following section demonstrates. In this respect, it should be noted that the order of execution – i.e. which category is analyzed first – is also a point of concern since accuracy levels are affected significantly. In the methodology developed here, the rules are applied to patentees in the following sequence: private enterprises; universities; hospitals; public and private non-profit sector; and finally individuals.

<sup>7</sup> In Appendix A the total list of SQL queries with keywords used for generic and case oriented rules are given. In addition, Appendix B provides an overview of an additional list of (exact) case oriented rules (exact matching) that have been included in the methodology.

---

After application, validation efforts are geared to all possible outcomes. If only one sector code is allocated, accuracy of the findings obtained is assessed. Case based adaptations are introduced as needed, i.e. when too many false hits are generated by a particular rule. If names do not obtain a code, a search for additional generic rules is initiated. Moreover, if patent volume for such patentees is considerable, case-based decision criteria will be considered. Finally, the occurrence of multiple codes is assessed and additional, conditional, rules to remedy the situation are introduced.

Within a next step the refined rules are applied, resulting in a more complete and accurate sector allocation which leads to additional validation efforts. These steps are repeated until 99% of all patent volume is assigned to a sector and 99% of patents is correctly allocated to the sector.

### **3.2 Implementing the rule-based and case-based methodology: Results**

In order to further clarify the principles and logic adopted, Table 3 contains a sample of 10 patentees for each category and the sector/s they are assigned to after applying an initial set of rules. The table also includes 10 patentees that are not yet allocated to a sector. In addition, some patentees are allocated incorrectly to a sector. For instance, VITO, a Flemish research organization (public), has been given a company code since its name includes a legal form (N.V.) that is mostly associated with companies. Likewise, Andreas Stihl is a company and not an individual inventor. Finally, it should also be noted that multiple codes occur frequently since one and the same name might include clues that suggest different sector allocations. For example, Virginia Foundation for Independent Colleges obtains a sector code for universities (Colleges) and one for private non-profit (Foundation).

Table 3 :An example of 10 patentees in each of the sectors and 10 patentees with multiple sector codes

	Sector	Patentees
Single Code	Individual	“DELAFON; JACOB”; “STIHL; ANDREAS”**; “KOIKE; YASUHIRO”; “PREGENZER, BRUNO”; “STOBBE, ANATOLI”; “TRAWÖGER, WERNER”; “FREI, SIEGFRIED”, “UEGAKI; TATEO”; “IKEDA, TAKESHI”; “NILL, WERNER”
	Private Enterprise	“SIEMENS AKTIENGESELLSCHAFT”; “INTERNATIONAL BUSINESS MACHINES CORPORATION”; “BASF AKTIENGESELLSCHAFT”; “MATSUSHITA ELECTRIC INDUSTRIAL CO., LTD.”; “ALCATEL*”, “L’OREAL *”; “TEXAS INSTRUMENTS INCORPORATED”; “MOTOROLA, INC.”; “CIBA-GEIGY AG”; “VLAAMSE INSTELLING VOOR TECHNOLOGISCH ONDERZOEK, AFGEKORT V.I.T.O., ONDERNEMING VAN OPENBAAR NUT ONDER DE VORM VAN EEN N.V.”**
	University	“UNIVERSITE DE MONTREAL”; “DREXEL UNIVERSITY”; “CHINESE ACADEMY OF SCIENCES”**; “THE GOVERNORS OF THE UNIVERSITY OF ALBERTA”; “PRESIDENT & FELLOWS OF HARVARD COLLEGE”; “GEORGIA TECH RESEARCH CORP.”*; “TECHNISCHE UNIVERSITEIT DELFT”; “YALE UNIVERSITY”; “THE UAB RESEARCH FOUNDATION”*; “AUBURN UNIVERSITY”
	Hospital	“CEDARS-SINAI MEDICAL CENTER”; “BRIGHAM AND WOMEN’S HOSPITAL”; “BETH ISRAEL DEACONESS MEDICAL CENTER”; “ASSISTANCE PUBLIQUE HOPITAUX DE PARIS”; “MOUNT SINAI HOSPITAL”; “SHRINERS HOSPITALS FOR CRIPPLED CHILDREN”; “ORTHO-CLINICAL DIAGNOSTICS”**; “DANA FARBER CANCER INSTITUTE”*; “RHODE ISLAND HOSPITAL”; “THE HITCHCOCK CLINIC”
	Public and Private non-profit	“UNITED KINGDOM ATOMIC ENERGY AUTHORITY”; “COMMISSARIAT A L’ENERGIE ATOMIQUE”; “UNITED STATES DEPARTMENT OF ENERGY”; “NATIONAL INSTITUTE OF AGROBIOLOGICAL SCIENCES”; “BATTELLE-INSTITUT E.V.”; “INSTITUT FRANÇAIS DU PÉTROLE”; “SAGAMI CHEMICAL RESEARCH CENTER”; “FOX CHASE CANCER CENTER”; “CSIR”*; “CORNELL RESEARCH FOUNDATION”**
	Unknown	“F.A.S.”; “DEVICES FOR VASCULAR INTERVENTION”; “STRATOS LIGHTWAVE”; “COLAS”; “FIOR DE VENEZUELA”; “INTERAG”; “KENZO”; “WEST POINT PEPERELL”; “FRED”; “SIARC”
Multiple codes***	University and Public and Private non-profit	“CTRC RESEARCH FOUNDATION BOARD OF REGENTS”; “THE KANAGAWA ACADEMY OF SCIENCE AND TECHNOLOGY FOUNDATION”; “ACADEMY OF APPLIED SCIENCE (DIVISION OF ALLOR FOUNDATION)”; “WISCONSIN ALUMNI RESEARCH FOUNDATION”; “TRUSTEES OF TUFTS COLLEGE”; “STICHTING HOGESCHOOL VAN UTRECHT”; “DEUTSCHES WOLLFORSCHUNGSGESELLSCHAFT AN DER RHEINISCH-WESTFÄLISCHEN TECHNISCHEN HOCHSCHULE AACHEN E.V.”; “KIRKWOOD COMMUNITY COLLEGE FACILITIES FOUNDATION”; “VIRGINIA FOUNDATION FOR INDEPENDENT COLLEGES”; “TRUSTEES OF BOSTON COLLEGE”
	Private Enterprise and Public and Private non-profit	“INSTITUTE FOR INFORMATION INDUSTRY”; “KOREA INSTITUTE OF SCIENCE AND TECHNOLOGY”; “INSTITUT FÜR MIKROTECHNIK MAINZ GMBH”; “INSTITUT FÜR NEUE MATERIALIEN GEM. GMBH”; “GENETICS INSTITUTE, LLC”; “INSTITUT STRAUmann AG”; “ISTITUTO DI RICERCHE DI BIOLOGIA MOLECOLARE P. ANGELETTI S.P.A.”; “INSTITUT CERAC S.A.”; “NEC RESEARCH INSTITUTE INC.”; “DANA-FARBER CANCER INSTITUTE, INC.”
	Private Enterprise and University	“ABC SCHOOL SUPPLY, INC.”; “IT’S ACADEMIC OF ILLINOIS, INC.”; “COLLEGE PARK INDUSTRIES, INC.”; “ACADEMIC PHARMACEUTICALS, INC.”; “F.H. SCHULE MÜHLENBAU GMBH”; “CAMBRIDGE UNIVERSITY TECHNICAL SERVICES LIMITED”; “UNIVERSITY PATENTS, INC.”; “IDAHO RESEARCH FOUNDATION, INC.”; “TOKYO INSTITUTE OF TECHNOLOGY”; “HELSINKI UNIVERSITY LICENSING LTD. OY”

\* Case-based allocation

\*\* Incorrectly assigned; corrected by case-based rule

\*\*\*Corrected by case-based conditional rules

These observations justify further efforts. These efforts focus on: 1) creating additional rules based on a content analysis of non-assigned patentee names; 2) refining rules in order to avoid multiple codes; and 3) verifying whether assigned codes are accurate and if not, introduce more refined rules. These refinements will also imply that certain rules are made conditional. In total, over 7.000 names of patentees have been subject to further analysis (5.400 unassigned patentees; 1.800 patentees have been assessed in terms of accuracy).

After several iterations, a level of completeness of over 99% is obtained (see Table 4). For the EPO and USPTO data respectively, 99,79 % and 99,80% of the patent volume obtains a code.

*Table 4:* Number of patent assigned after the final round of sector assignments.

IND	COMP	GOVR	UNIV	HOSP	NONP	UN-KNOWN	EPO			USPTO		
							Nr. of patentees	Nr of patents	%	Nr. of patentees	Nr. of patents	%

Percentage of organisations with a single code excluding the sector unknown/other							99,79%					99,80%

In order to assess accuracy, the top 200 patentees<sup>8</sup> in each category (measured by the number of patents) have been assessed in terms of correctness<sup>9</sup>, for each patent system (EPO and USPTO) separately. Table 5 provides an overview of the findings obtained in terms of accuracy.

In several categories, the level of accuracy is sufficient. In the case of individual inventors and companies, all codes have been assigned correctly; for universities and hospitals, accuracy levels exceed 99%. This is, however, not the case for the government and private non-profit categories, where multiple cases demonstrate the difficulty in classifying their organization in one or other category, based on name information alone. Several research institutes adopt a legal form which suggests a non-profit organization although they are mainly funded by the government. However, it is impossible to deduce this from the name of such organizations. A specific, case-based, assessment needs to be performed on these organizations, if sufficient levels of accuracy in allocating categories are to be obtained. Engaging in an exercise of this magnitude is clearly beyond the scope of the current exercise. At the same time, it can be noted that when combining both categories into a ‘public and private non-profit’ sector, the overall accuracy for this combined category again exceeds 99%. Therefore, as a result of our work in developing this methodology, we recommend that patentees be allocated to 6 sectors: namely, (1) individuals; (2) private enterprises; (3) universities; (4) hospitals; (5) public and private non-profit organizations (6) unassigned/unknown. By adopting this classification, accuracy and completeness levels of 99% are feasible. Notice that, depending on the objectives pursued, the analyst can choose the most appropriate option: aggregate data provided by this methodology, or engage in data enrichment for these specific categories to obtain higher levels of accuracy.

<sup>8</sup> One could expect that the overall figures are lower for a random selection of patentees as the method has focused on larger patentees. Indeed, accuracy figures are somewhat lower for a random sample (n=600; 100 patentees for each category). For USPTO overall accuracy levels remain above 99% (99,57%); for EPO, figures drop to 98 %, mainly due to a decrease in accuracy for individuals (92%).

<sup>9</sup> This assessment implied for each name a verification of the actual status, based mainly on analyzing information found on the websites of the organizations involved.

Table 5: Results on the number of incorrectly assigned organizations from the final validation of sector assignment for the top 200 patentees in each sector

Sector	EPO		USPTO	
	Nr. patentees	% Patent volume	Nr. patentees	% Patent volume
Individual (n = 200)	1	0.52	2	1.54
Company (n = 200)	0	0	0	0
Government (n = 200)	4 (9)*	0.60 (3.51)*	0 (6)*	0 (0.66)*
University (n = 200)	0	0	1	0.13
Hospital (n = 200)	0	0	0	0
Private non-Profit (n = 200)	40 (32)**	47.16 (40.74)**	35 (28)	14.51 (12.83)
Total sample	13 (45)	0.17 (1.14)	9 (38)	0.04 (0.23)

\* In parenthesis the number and % patent volume of intergovernmental organizations which can be allocated here or in the non-profit sector.

\*\* These organizations are funded by the local government of the respective country but most of these have a legal abbreviation of a non-profit organization.

Similar conclusions can be drawn for unassigned patentees and patentees for whom applying the methodology produces multiple codes. While the first category accounts for less than 1% of the total patent volume, a complete removal of this category entails manual verification of 14,264 patentee names. The total number of patentees obtaining multiple codes amounts to 6,949. Although this is a small proportion, the absolute numbers mean considerable resources will need to be deployed if a diagnosis based solely on manual verification efforts is to bear fruit. Also here, the analyst can opt for further refining cases which receive multiple codes, or consider these cases as ‘unknown’.

---

## 4. Conclusion

In this contribution, we developed a methodology designed to assign patentees to different sectors. This methodology combines both rule-based and case-based logic. The rule-based logic works on the assumption that information incorporated in patentee names can provide clues on ‘sector’ membership, which can then be translated into a set of rules for the automated allocation of sector codes. In practice, such a rule-based approach proves to be insufficiently complete and accurate. The absence of clues, as well as the simultaneous presence of several clues that suggest different sectors, is a common feature. In order to remedy this situation, a second, case-based, layer has been introduced. When applied in an iterative and sometimes conditional manner, quality levels, both in terms of completeness and accuracy, of 99% are obtained: less than 1% of the patent volume fails to obtain a sector code; the patent volume accurately assigned to a particular sector exceeds 99%.

It should be noted that, in two categories, further refinements in terms of accuracy can be considered: governmental agencies and private non-profit. If one refrains from combining both categories, the accuracy level for the private non-profit category remains below 90% since a large proportion of these organizations are, in fact, funded by governmental agencies.

Improving the accuracy levels in this category – and for the methodology as a whole – is feasible by introducing expert assessments in a systematic manner. Given the volume of names involved, such an effort is beyond the current resources of EUROSTAT and its partners who developed this methodology (INCENTIM/SOOS, K.U.Leuven). At the same time, numerous researchers and analysts are currently working on sector allocation with specific samples (e.g. technological fields, countries/regions, and sectors). For researchers engaged in such efforts, building on this methodology might be helpful; equally, the insights obtained by researchers and analysts might be beneficial for further refinement of the current methodology. In other words, by sharing the methodology developed among the different communities involved in patentee analysis, further improvements could be envisaged. Consequently, EUROSTAT and its partners decided to put the complete methodology into the public domain. In the appendices, the full set of procedures is made available, making allowances for implementation<sup>10</sup>, verification, and the development of appropriate extensions.

Furthermore, given its continuous involvement in the PATSTAT Taskforce activities, EUROSTAT, in collaboration with the researchers at K.U.Leuven who developed this methodology, is committed to making freely available all future improvements in this methodology, including those obtained from other researchers and analysts.

---

<sup>10</sup> If considered more relevant, a version in SQL format is also available from the authors.

```

---

## **STEP 8: CONDITIONAL RULES FOR ORGANISATIONS WITH MULTIPLE CODES OR INCORRECT CODES**

Within this step, the rules applied for addressing multiple codes are presented in a systematic manner. Multiple codes occur when a patentee name contains clues that refer to different categories. A patentee name with the words University, Foundation and a company legal form eg. LTD will obtain three different codes. For instance, the sector codes 2 (Company), 4 (University) and 6 (Private Non Profit) are allocated to the name ‘Georgia State University Research Foundation, INC.’. This is corrected by a conditional rule: if University and Foundation are both in the patentee name than the sector code 4 (University) should be given. Likewise, the \*City Of Hope Research Institute\* received sector code 3 (Government) and 6 (Private non Profit), but the correct code is 4 (University); therefore a conditional rule was added to correct for this incorrect double sector code assignment; \*Carl Zeiss Stiftung Trading As Schott Glaswerke\* received codes 2 (Company) and 6 (Private non Profit); with a conditional rule code 2 was assigned

In order to clarify the statements, notice that the following categories hold:

Individuals: Category 1 (ORG\_TYPE\_1)  
Companies: Category 2 (ORG\_TYPE\_2)  
Government: Category 3 (ORG\_TYPE\_3)  
Universities: Category 4 (ORG\_TYPE\_4)  
Hospital: Category 5 (ORG\_TYPE\_5)  
Private Non Profit: Category 6 (ORG\_TYPE\_6)
