Hello

Years ago there used to be many seagulls flying behind each ship and ferryboat. Last time I took a ferry (from Italy to Greece) there were no seagulls anymore. I wondered why and my conclusion was, that the ships are not allowed to put their biological waste to the sea anymore. Its good to have clean water - for me too, I like to swim. But is it possible, that the fishes don't have enough food now and it wood be wise to give them some food to make the population grow easier?

Yours sincerely

Barbara Martin
