Fishery ought to be much more controlled in order to guaranty the sustainability of fish stocks and the marine biodiversity. Rules (limitation of fishing quantities, retaliations, agreement with North Africa about the Mediterranean sea, creation of marine preservation areas, struggle against creation of marine deserts, forbidding fishery of menaced fishes, forbidding dredge fishery, etc.) ought to be much stricter. To me, the EU should promote the consumption of fish species that are not threatened of disappearing and that are not eaten just because they are not well known by EU citizens.

From beforehand thank you for taking my advise into account.

Best regards,
