

MEASURES APPLICABLE TO GUAR GUM FROM INDIA
INFORMATION AS REGARDS ANALYTICAL REPORTS

The Commission Decision imposing special conditions on guar gum originating from India requires that all consignments of guar gum or products containing guar gum at significant amounts originating in or consigned from India, **which left India after 4 May 2008** and imported into the Community intended for human or animal consumption, shall be accompanied by an original analytical report issued by a laboratory accredited according EN ISO/IEC 17025 for the analysis of PCP in food and feed or by a laboratory that is pursuing the necessary accreditation procedures and which has adequate quality control schemes in place accompanying the consignment demonstrates that the product does not contain more than 0.01 mg/kg pentachlorophenol (PCP). The analytical result must be reported with the expanded measurement uncertainty. **The analytical report shall be endorsed by a representative of the competent authority from the country where the laboratory is located.**

As regards **analytical reports endorsed by the competent authority of India**, according the findings of the FVO, **the Vimta Labs, Hyderabad, Andhra Pradesh is the only laboratory in India which fulfils the requirement of accreditation and/or having in place the appropriate quality control schemes.**

As regards the laboratories in the European Union, in order to reduce the administrative burden, it was agreed that a list of laboratories within the EU authorised to perform the PCP analysis would be established and put on the SANCO website. Analytical reports from these laboratories are considered to be endorsed automatically by the competent authority of the country where the laboratory is located.

Based upon the information received from the competent authorities a list of laboratories from which the analytical reports are considered as automatically endorsed has been compiled and is available in Annex.

Analytical reports from other laboratories in the EU need to be each individually endorsed by the competent authority of the country where the laboratory is located in order to be acceptable for authorisation of import of guar gum or products containing guar gum originating from India !

ANNEX

Laboratories from which the analytical reports are considered to be endorsed automatically by the competent authority of the country where the laboratory is located.
