

Trusted **big data** solutions and **cybersecurity** for health & care

Robotics, AI, and autonomous systems in healthcare

Accelerating the translation of **advanced x-cutting KETs** to address healthcare at the **point of need**

Conclusions

Enlarge the collaboration with other entities is recommended (DGs: REGIO, GROWTH, HEALTH, ...) but also EIB, Regions, SMEs clusters, ...

Local to large pilot trials: **interconnecting and scaling up what is working and testing what is new**

Regulations, ethical and legal issues are important, but have to be addressed elsewhere.

To get end-users **acceptance & confidence** to new systems, ***they must be robust and integrated***, end-users need to learn about it by testing it.
