EXAMPLES OF CONCRETE ACTIONS

Projects funded under the Public Health Programme 2003-2008

- EUROCARE - Alcohol Policy Network in the Context of a Larger Europe: Bridging the Gap
  Running from 2003-2006 and receiving €1.1 million in EU funding, this project aims to set up a European Alcohol Policy Network, enabling knowledge and expertise to be shared across Member States.

- ELSA - Enforcement of national Laws and Self-regulation on advertising and marketing of Alcohol
  With €430 000 provided by the EU, this 2-year initiative is designed to assess the enforcement of national laws and self-regulation on advertising and marketing of alcoholic beverages in European countries, focusing on young people.

- PHEPA: Primary Health Care European Project
  The second phase of PHEPA was launched in 2006, bringing together public representatives from public authorities, NGOs and health professionals in order to develop a web-based resource centre, common clinical guidelines and training programmes which encourage short-term alcohol-related interventions by medical staff.

Research on alcohol

- Genomics, mechanisms and treatment of addiction
  Receiving over €1 million under the EU’s 6th Framework Research Programme and running from 2005-2009, this project aims to identify genes associated with addiction to nicotine, alcohol and illicit drug use.

- European Prospective Investigation into Cancer, Chronic Diseases, Nutrition and Lifestyle
  This study kicked off in December 2005, with almost €1 million in EU funding. It will determine the relationship between lifestyle and related metabolic characteristics and the cause and prevention of cancer, coronary heart disease and stroke.

- DRUID: Driving under Influence of drugs, alcohol and medicine
  This 2-year initiative began in January 2006 and brings together 21 European countries. Its goal is to tackle the problem of driving under the influence of drugs, alcohol and medicine by finding out more about their effects.

December 2006

Reducing alcohol-related harm across the EU

55 million adults are estimated to drink alcohol to harmful levels in the EU. Harmful alcohol consumption is a serious threat to public health and can result in considerable social and economic costs.

The EU aims to support and complement Members States’ efforts to address the adverse health effects of alcohol abuse, as well as the associated social and economic consequences. EU actions to tackle alcohol abuse and the harm it causes focus on under-age drinking, accidents, violence and disease.

CONTEXT AND NEED FOR EUROPEAN ACTION

How is “harmful use of alcohol” defined?

- Harmful or hazardous drinking is defined as a pattern of drinking alcohol that causes damage to health.

- Alcohol consumption is commonly measured in units: 1 unit is generally considered to be 8-9 grammes of pure alcohol within an alcoholic beverage, equivalent to one glass of wine (10 cl) or two glasses of beer (25 cl).

- Drinking more than 4 units a day for adult men and more than 2 units a day for adult women is considered as harmful and is known to carry a progressive health risk.

- For children and young adolescents, there is no proven safe limit of alcohol consumption.

What are the risks of excessive alcohol consumption?

- Alcohol consumption at harmful levels is estimated to be responsible for approximately 195 000 deaths each year in the EU as a result of cancer, liver cirrhosis, road traffic and other accidents, homicides, suicides and neuropsychiatric conditions.

- Alcohol abuse is the third main cause of early death and illness in the EU, behind only tobacco and high blood pressure. It is directly responsible for some 60 diseases and health problems including lung diseases, breast cancer, mental and behavioural disorders, cardiovascular problems, foetal and reproductive disorders.

- Alcohol abuse can lead to serious negative social consequences, such as violence, hooliganism, crime, family problems and social exclusion. Between 5 and 9 million children live in families with alcohol problems and alcohol is a factor in 1 in 4 murders and 1 in 6 suicides.

- Alcohol consumption during pregnancy can impair brain development in the foetus. In France, more than 700 children were born with Foetal Alcohol Syndrome in 2001 and more than 60 000 people are estimated to be living with this condition.
What are the common patterns of alcohol consumption in the EU?

- Some 55 million adults are estimated to drink to harmful levels in the EU, 23 million of whom are considered to be addicted.

- Though overall alcohol consumption in the EU declined after reaching a peak in the mid-70s, Europe remains the heaviest drinking region in the world, with a yearly per capita consumption of 11 litres (equivalent to 1400 small beers per person per year), which is double the world average.

- The risk of becoming alcohol dependent is higher in less advantaged social groups, therefore contributing to health inequalities across society.

- The last ten years have seen sharp increases in the numbers of young people with hazardous drinking patterns.

- Habits such as “binge drinking” (repeated heavy drinking, more than 5 alcohol units at a time, with the purpose of getting drunk) and under-age drinking (see box) put young people at particular risk from the dangers of alcohol abuse.

- With one in three adults across the EU saying they binge drink at least once a month, this harmful drinking pattern has become more widespread throughout Europe, especially in the 10 new EU countries. According to a 2003 WHO survey, over 38% of male drinkers in Poland and 30% of male drinkers in Hungary described themselves as weekly binge drinkers, compared to 24% in the UK and 8.5% in Spain.

The tangible cost of alcohol by component, 2003

Why is there a need for action at EU level?

- Harmful use of alcohol has a major public health impact and generates costs for health care, health insurance, law enforcement, public order and the workplace accounting to some 1.3% of GDP.

- Member States have called on the European Commission to define EU-wide action in a strategy on reducing alcohol-related harm to complement national policies.

- Reducing alcohol-related harm will increase the number of years people live in good health and contribute to the Lisbon Agenda objective of more Healthy Life Years for all.

- Some problems are shared by all Member States, such as underage drinking or alcohol-related road accidents. Therefore, cooperation and effective coordination between Member States is crucial for the exchange of information, knowledge and scientific expertise.

What has the EU already done to reduce alcohol related harm?

- In 2003, the European Commission recommended measures to tackle drink driving, including an EU-wide Blood Alcohol Concentration (BAC) maximum limit. Special attention has been given to drink driving in the Road Safety Action Programme 2003-2008, with tighter controls of blood alcohol levels.

- The Council adopted in 2001 a Recommendation on the drinking of alcohol by young people to raise awareness about the impact of harmful use of alcohol, to educate young people about the risks of alcohol and to urge for action against the illegal sale of alcohol to under-age consumers.

- In the 2003-2008 Community Public Health Programme, several actions focus on drink-driving countermeasures and awareness-raising activities to combat alcohol-related harm.

- The EU has also acted at the workplace by setting up tighter controls of blood alcohol level maximum limits for drink-driving purposes.

- The European Parliament has recommended the setting up of a Road Safety Action Programme running from 2003 to 2008.

- In cooperation with the World Health Organisation, the EU is collecting comparable information on alcohol consumption at EU level.

What are the main objectives of the EU strategy adopted in October 2006?

- In October 2006, the European Commission recommended measures to tackle harmful use of alcohol, to educate young people about the risks of alcohol and to urge for action against the illegal sale of alcohol to under-age consumers.

- The Council adopted in 2001 a Recommendation on the drinking of alcohol by young people to raise awareness about the impact of harmful use of alcohol, to educate young people about the risks of alcohol and to urge for action against the illegal sale of alcohol to under-age consumers.

- In the 2003-2008 Community Public Health Programme, several actions focus on drink-driving countermeasures and awareness-raising activities to combat alcohol-related harm.

- The EU has also acted at the workplace by setting up tighter controls of blood alcohol level maximum limits for drink-driving purposes.

- In cooperation with the World Health Organisation, the EU is collecting comparable information on alcohol consumption at EU level.

- The EU has also acted at the workplace by setting up tighter controls of blood alcohol level maximum limits for drink-driving purposes.

- In cooperation with the World Health Organisation, the EU is collecting comparable information on alcohol consumption at EU level.

This strategy will be put into practice through:

- Setting up an Alcohol and Health Forum – involving the drinks industry, NGOs and leading public health experts. Its job will be to look at ways in which the industry can perform voluntary actions to combat dangerous drinking.

- Working with the advertising and marketing industry on voluntary actions to promote responsible advertising and sales.

- Supporting Member States and stakeholders in a range of voluntary actions to promote responsible advertising and sales.

- Setting up a common evidence base for the surveillance of alcohol consumption and related social, economic and health indicators.

- Developing and maintaining a common evidence base (comparable information on alcohol consumption) at EU level.

- Informing, educating and raising awareness on the impact of alcohol and on appropriate drinking habits.

- Preventing alcohol-related harm among adults and its effects at the workplace.

Key data on alcohol drinking habits of young Europeans

- 1 in 4 deaths among young men (aged 15-29) and 1 in 10 deaths among young women is due to alcohol abuse (often caused by road traffic accidents, homicide, violence and even liver disease).

- According to the WHO, weekly drinking by young people across the EU is reported by some 5% of 11-year olds, 12% of 13-year olds and 29% of 15-year olds.

- Over 90% of 15-16 year-old Europeans have drunk alcohol at some point in their life with the average age for getting drunk for the first time being 14 years.

- In 2003, around 23% of 15-16 year-old boys in the EU reported binge drinking at least 3 times in the previous 30 days, according to European School Survey project on Alcohol and other Drugs (ESPAD).

The EU’s actions

What has the EU already done to reduce alcohol related harm?

- In 2001, the Commission recommended measures to tackle drink driving, including an EU-wide Blood Alcohol Concentration (BAC) maximum limit. Special attention has been given to drink driving in the Road Safety Action Programme 2003-2008, with tighter controls of blood alcohol levels.
- The Council adopted in 2001 a Recommendation on the drinking of alcohol by young people to raise awareness about the impact of harmful use of alcohol, to educate young people about the risks of alcohol and to urge for action against the illegal sale of alcohol to under-age consumers.
- In the 2003-2008 Community Public Health Programme, several actions focus on drink-driving countermeasures and awareness-raising activities to combat alcohol-related harm.
- The Television without Frontiers Directive foresees restrictions to alcohol advertising. For instance, commercial messages specifically aimed at minors or depicting minors consuming alcohol are not allowed.
- In cooperation with the World Health Organisation, the EU is collecting comparable data for the surveillance of alcohol consumption and related social, economic and health indicators.
- The EU supports research into the causes of alcohol-related disease by funding R&D projects.

What are the main objectives of the EU strategy adopted in October 2006?

In October 2006, the EU adopted a comprehensive strategy to support Member States in reducing alcohol-related harm in Europe. Five priority objectives for which Community action would bring added value to national policies have been identified:

- Protecting young people, children and the unborn child
- Reducing injuries and deaths from alcohol-related road accidents
- Preventing alcohol-related harm among adults and its effects at the work place
- Informing, educating and raising awareness on the impact of alcohol and on appropriate drinking habits
- Developing and maintaining a common evidence base (comparable information on alcohol consumption) at EU level.

This strategy will be put into practice through:

- Setting up an Alcohol and Health Forum – involving the drinks industry, NGOs and leading public health experts. Its job will be to look at ways in which the industry can perform voluntary actions to combat dangerous drinking.
- Working with the advertising and marketing industry on voluntary actions to promote responsible advertising and sales.
- Supporting Member States and stakeholders in a range of areas including the exchange of best practice on policies and measures used to tackle alcohol-related harm.
Examples of concrete actions

Projects funded under the Public Health Programme 2003-2008

- **EUROCare** - Alcohol Policy Network in the context of a larger Europe: Bridging the Gap
  Running from 2003-2006 and receiving €1.1 million in EU funding, this project aims to set up a European Alcohol Policy Network, enabling knowledge and expertise to be shared across Member States.

- **ELSA** - Enforcement of national laws and self-regulation on advertising and marketing of alcohol
  With €430 000 provided by the EU, this 2-year initiative is designed to assess the enforcement of national laws and self-regulation on advertising and marketing of alcoholic beverages in European countries, focusing on young people.

- **PHEPA** - Primary Health Care European Project
  The second phase of PHEPA was launched in 2006, bringing together public representatives from public authorities, NGOs and health professionals in order to develop a web-based resource centre, common clinical guidelines and training programmes which encourage short-term alcohol-related interventions by medical staff.
