

**Thursday 6 October 2005**  
**Development and successful implementation of E-Health services**  
**Enschede, The Netherlands**

Many people of various disciplines seriously believe that ICT can solve at least part of the problems which our health care system is faced with. During the past years indeed technology has developed at an incredible speed enabling the necessary infrastructure and other facilities. However, despite these developments, successful E-Health services are still really scarce. Apparently, other factors determine a successful implementation.

As part of the European HelloDoc project, a one day congress is organized, in which we invited keynote speakers to share their ideas of E-Health services and their experiences in the implementation trajectory. The final program is included. We expect that sharing these experiences will contribute to more successful implementations of E-Health services in the near future.

**For who**

People involved in the development and implementation of E-Health services: health care providers, researchers and industry in the areas of ICT and biomedical engineering, healthcare insurances and policy makers.

**When**

The congress will take place at the Dish-hotel in Enschede, the Netherlands at October the 6<sup>th</sup> of 2005.

Signing up for the congress can be done on the following website:

[www.hoytemastichting.nl](http://www.hoytemastichting.nl). Maximal number of participants is set to 150.

**Costs**

Registration fee is 65 € . Special student rate is 25 € . Lunch included.

This congress is organised by Roessingh Research and Development on behalf of the European E Ten project HelloDoc, with support of ICMCC and IZIT.
