

Billing4Rent

Billing4Rent offers outsourced customer care and billing solutions to Fixed Wire, Wireless, VoIP, ISP and Cable TV providers. The solution uses “Software as a Service” (SaaS) to reduce implementation times from months to days. The Billing4Rent internet-based user interface ensures that you can access the system from anywhere and the user friendly front-end makes you immediately productive on the system. The Billing4Rent vision is for all businesses to have access to the highest quality back-office applications.

Billing4Rent offers an attractive alternative to the current dilemma of many small to medium businesses whose billing needs are not of sufficient size to require the purchase of a billing system. These companies have invoicing needs beyond what can be provided by standard desktop applications such as Microsoft Access / Excel. Billing4Rent’s new and innovative SaaS billing solution will provide companies with a low cost, easy to use, pay-as-you-go billing system for their services.

The objective of the eTEN Billing4Rent project is to carry out a market validation of the Billing4Rent product and service. The project will undertake the following to lead it to the initial deployment phase:

- Analysis of the potential market including the analysis of competitors and their products.
- Preliminary business plan outlining market entry, technical deployment strategies and organisational structure of operations.
- Trials will be undertaken by customers to evaluate the system.
- Implementing dissemination strategy to publicise the project’s results and progress.

The Billing4Rent project consortium consists of:

- RDN Radio Data Networks, Italy
- UAB SSC Skaitmeninio Sertifikavimo Centras, Lithuania
- Aceno Mobile Services, Ireland
- IES Solutions, Intelligence for Environment & Security, Italy
- Intec Billing, Ireland.
- Billing4Rent, Ireland
- Telecommunications Software & Systems Group (TSSG) – part of Waterford Institute of Technology, Ireland

The variety of participating European partners provides expertise in many areas of billing and gives the opportunity to address national characteristics and differences concerning various aspects of the system.
