

Follow Up To The ePSI Platform

Presentation to the ePSI Meeting
Luxembourg

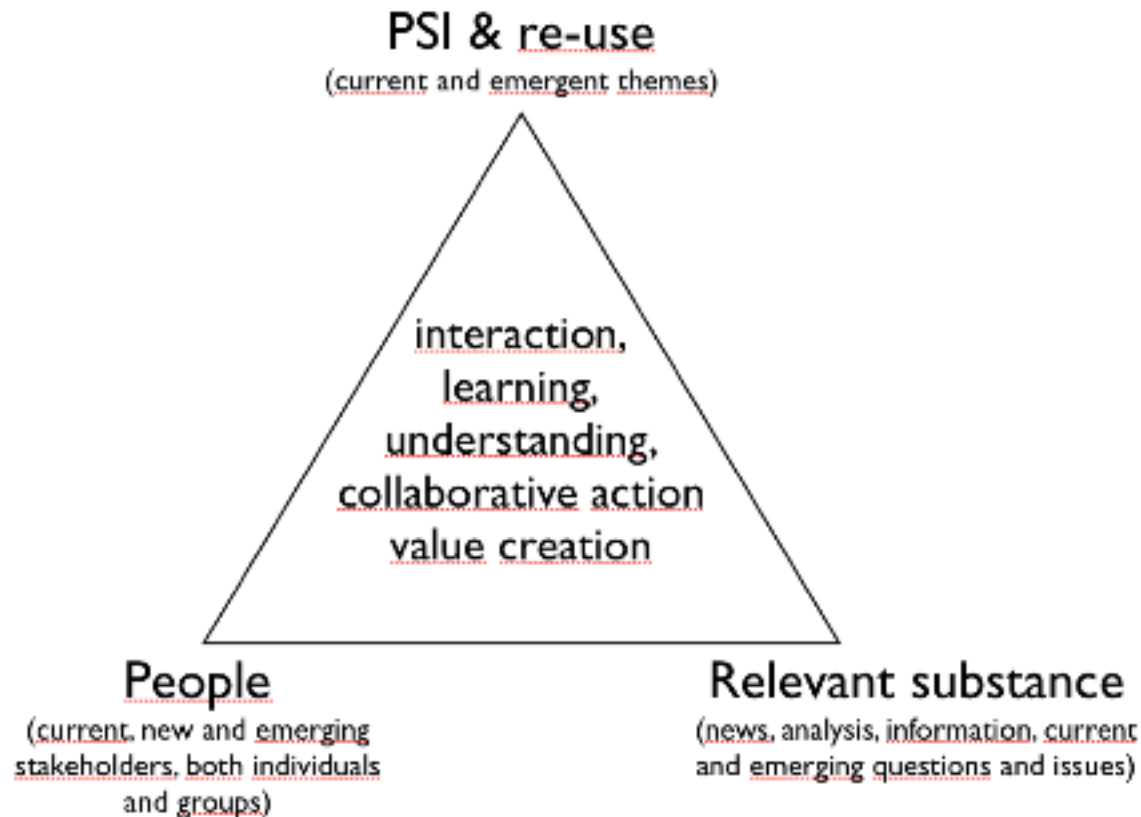

Thursday, January 27th

March 1st, a new team starts to maintain the ePSI-platform

- Zenc B.V.
 - Ko Mies
 - Tom Kronenburg
- Interdependent Thoughts
 - Ton Zijlstra
- Time.lex
 - Katleen Jansen
 - Hans Graux
- Citadel Consulting
 - Marc de Vries
- Open Knowledge Foundation

We want the EPSI platform to be a meeting place, as much as a library, newssite

All three aspects interact, creating value and energy

With relevant substance people are attracted, and in turn bringing in new and experienced people will lead to more relevant substance.

Content is the object of interaction, for both existing and new connections between people, while people create and bring new content in the course of their interaction.

Defining (and keeping track of shifts in) the domain comes from both the interaction and by providing analysis as content, where the domain attracts new people if it is clearly defined and sets the scope for the types of content gathered.

In our plans we focus on keeping whatever is good, and improving where possible.

- Revamp website
 - More emphasis on people!
 - More intuitive interface
 - More emphasis on experiences/best practices/narratives
 - ePSI Scoreboard
- Organise 24 Mission Meetings
- Organise 2 conferences
- Review of 50 Court cases
- Review of 24 new products

We will harness the power of the collective and the individual to stimulate Open Data, PSI re-use

- ePSIes (Awards)
- Expert Advisory Board, Sectoral Experts
- Workshops
- Mission meetings
- Open Knowledge Foundation (Germany/UK)

The ePSI platform will remain THE one-stop shop for all matters PSI, ReUse and Open Data

Our objectives for the ePSI platform 2.0, maintaining the web platform with content, stimulating the stakeholders network, the advisory service as well as raising awareness are all intertwined, mutually interdependent and reinforcing.

The ePSI platform will, under our guidance, be an even more visible beacon, guiding EU citizens and corporations into a PSI-rich future.
