

Visit and get familiar with the eParticipation Platforms!

- MyUniversity project's goal is to equip universities with an e-Participation platform that allows university members and stakeholders to actively participate in the higher education decision making process, both locally and at European level.
- This platform is based on the integration and customization of three existing platforms: Demos@Work, Gov2DemOSS and Pnyx.

The main supported tools and their functionality

Forum ▪ If used properly, forums are very powerful tools in a participation environment. MyUniversity uses a very simple and easy to use forum board, which is designed with a user-centric approach. A forum consists of one or more categories (a.k.a. boards). Each category can have one or more threads (a.k.a. discussions) available, where users can post their opinions and read other users' opinions. Users have the opportunity to select a board, a discussion, create a new discussion, rate a post etc.

Processes ▪ The participation processes is a flexible tool that allows the creation of mini-sites within the portal. Each participation process consists of a description, a document repository and optionally additional tools such as a forum, a GIS system etc.

Petitions ▪ This component gives the ability to any registered member of the portal to create a new e-Petition. When a new petition is submitted and approved, it can be signed by the registered users of the portal. The creator of the petition configures the minimum number of signatures required for the petition, as well as the expiration date, after which no more signatures are accepted.

Polls ▪ A number of polls can be created on the portal. A poll consists of a subject and a number of predefined answers. Users can vote directly for the featured poll, view the results or access the rest of the published polls.

Communicate • Visitors of the portal can create a new letter, which can be published on the portal after necessary approval. As soon as the recipient of the letter answers, the user will be notified by email and the answer will be published on the platform.

Newsletters • MyUniversity portals give their visitors the ability to subscribe to their newsletters. Additionally, current and past issues are published on the website for greater visibility.

News • This section displays the news articles uploaded to the portal. Registered users have the option to submit an article to the portal. Other options in this section are: creating a PDF file out of the article, printing the article and sending the article through email.

Calendar • The portals of MyUniversity feature an advanced and easy to use calendar of events for all their visitors. Users can view the events by year, month, week or day and search in the calendar. They can also propose an event to be included in the calendar after they log in.
