

Data access for official statistics – a local and a global view

The why

Private data holders should provide data to NSA's because

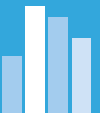

- Data is a common good
- That should be provided on the condition that they don't jeopardize the legitimate commercial use of data
- Which will ensure public access to well documented data for all

Examples of recent (or planned) legislative initiative

- Examples for a number of countries e.g. the UK and DK
- There could be another road to travel
 - The Statistical Code of Practise
 - National Quality Assurance Framework
 - => changes in legislation – national or at the EU level

What kind of enabling legislation can be adopted at EU level?

- The Single Digital Market
- European Data Economy

What we need is...

- Dialogue with data owners
- Data Collaboratives =
public/private data
partnerships

THANK YOU
