

# EUROBAROMETER 68

PUBLIC OPINION IN THE EUROPEAN UNION

## AUTUMN 2007

NATIONAL REPORT

IRELAND

This survey was requested and coordinated by Directorate-General for Communication.

This report was produced for the European Commission's Representation / Delegation in Ireland.

This document does not represent the point of view of the European Commission.  
The interpretations and opinions contained in it are solely those of the authors.

## **Introduction**

Ireland is one of a small group of countries where support for the country's membership of the European Union is of the order of 75 per cent or above. Ireland is also one of a small group of member states (four to be precise) that have voted down an EU treaty. With another Irish referendum (on the Lisbon Treaty) in the offing within the year, January 2008 is a good time to examine the evidence on current Irish attitudes to European integration and on other aspects of Irish public opinion that may have a bearing on the referendum process.

This is the twelfth report in a series of six-monthly reports on Irish attitudes to the European Union. Each report is based on evidence from the most recent Eurobarometer survey of public opinion. This report is based on *Eurobarometer 68.1* which was fielded between 24 September 2007 and 21 October 2007<sup>1</sup>.

## **Irish attitudes to European integration**

### *Basic trends in attitudes to European integration*

Figure 1 illustrates how Irish attitudes toward the EU have evolved since entry into the EEC in 1973. The following discussion will consider three indicators of attitudes to European integration, namely the 'membership' indicator, the 'benefits' indicator and the 'dissolution' indicator.

The indicator with the highest positive response in Ireland is the 'benefits' indicator<sup>2</sup>. As of autumn 2007, 87 per cent of Irish people thought the country had benefited from EU membership, the highest such score in the European Union. Among the original fifteen member states of the EU, only Greek people rate membership of the EU nearly as high with 80 per cent of respondents taking a positive view of the benefits of membership. In sharp contrast to these high numbers, the current EU average for perception of benefits from the EU is 58 per cent. On the other end of the scale only 7 per cent of Irish people believe membership has not been beneficial for the country compared to 32 per cent of Germans and 47 per cent of Britons.

---

<sup>1</sup> See appendix of technical specification for details.

<sup>2</sup> *Source:* EB 68.1 QA13a: 'Taking everything into account, would you say that (OUR COUNTRY) has on balance benefited or not from being a member of the European Union?'

Given this high perception of benefits, it is not surprising (though it is not inevitable) that 74 per cent of Irish respondents regard Irish membership of the EU as a good thing<sup>3</sup>. Only Luxembourg and the Netherlands have higher levels of support for membership at 82 and 79 per cent respectively. These high levels of support for membership are all the more impressive considering that support for membership is particularly low in some states, for example in Austria (38 per cent membership good), in Latvia (37 per cent) and in Britain where only 34 per cent of people believe EU membership is a good thing.

The third indicator to be examined is a measure commonly referred to as the ‘dissolution’ indicator<sup>4</sup>. This measures both enthusiasm and indifference toward the EU. The question was last posed to people in *Eurobarometer 62* in autumn 2004. It showed that while an overwhelming majority of Irish people thought membership was good (see above), only a bare majority of respondents (54 per cent) would be sorry to see the EU dissolved. This was coupled with a high level of indifference<sup>5</sup> (43 per cent) towards dissolution indicating that, while Irish people broadly approve of EU, enthusiasm for the Union far from universal. It is quite striking indeed that indifference/’don’t know’ responses outnumbered ‘very sorry’ responses around the time of the first Nice referendum (see bars in Fig.1). Unfortunately this question has not been asked since *Eurobarometer 62* in 2004 so this report is unable to examine this trend beyond that point. Even so, the indicator provides a timely reminder that a safe and substantial majority for EU treaty changes cannot be taken for granted.

Eurobarometer data allows us to trace the development of the attitudes we have just been considering from 1973 to the present time. The data shows that the number of Irish people who thought the EU was a good thing steadily grew from 1985 onwards, surpassing the EU average in 1988 and hitting a high point of 82 per cent support in 1997. Since then there has been a slight reduction in support for EU membership but today it still stands high in comparative terms at 74 per cent.

---

<sup>3</sup> *Source*: EB 68.1 QA12a: ‘Generally speaking, do you think that (OUR COUNTRY)’s membership of the European Union is a good thing, a bad thing or neither good nor bad?’

<sup>4</sup> Dissolution question posed in 2004 (*Source*: EB 62, Q15): ‘If you were told tomorrow that the European Union had been scrapped, would you be very sorry about it, indifferent or very relieved?’

<sup>5</sup> Indifference plus don’t know is illustrated in Figure 1 by the vertical bars rising from the base of the graph.

Figure 1 Trends in support for European Integration - Ireland and the EU 1973-2007

Source: EB 3 to EB 68.1 For details of question see text.

The Irish picture contrasts quite sharply with the trend in support for membership across the EU as a whole where there was a steady reduction in support for membership throughout the 1990s with only marginal improvements since then (see Fig.1). While 58 per cent of EU respondents as a whole consider their country's membership of the Union to be a good thing today, this contrasts with the 71 per cent of people who considered this to be the case in 1991 before the signing of the Maastricht Treaty.

As noted above, the dissolution indicator measures enthusiasm for the European Union. This has always been quite limited in the Irish case. The lowest levels of enthusiasm were exhibited in 2001 (the year that Ireland rejected the Nice Treaty). At that time 54 per cent of people said they felt indifference towards the Union, the highest level since 1983. Only 43 per cent said they would have been sorry to see the dissolution of the Union, the lowest level since 1987. However, this indicator recovered somewhat between 2002 and 2004.

In summary, widespread approval of Irish EU membership continues at a high level and Irish public opinion towards integration is much more positive in this respect than is European-wide opinion. At the same time, there are cautionary signs that need to be borne in mind, particularly with a referendum in the offing. Any further such signs will be considered as this report analyses the evidence from *Eurobarometer 68.1*.

#### *Policy orientations and preferences*

Of course, the fact that 87 per cent of people believe that Ireland has benefited from its membership of the EU or that 74 per cent think membership is a good thing does not mean that almost everyone agrees with almost everything the EU does all of the time. There are two things at stake here: attitudes to which issues the EU should decide and how good its decisions or policies have been. We will deal with the former under the heading of policy attribution and the latter under the heading of policy evaluation.

#### *Policy attribution*

The Eurobarometer regularly asks respondents whether they would prefer policy responsibility for specific issues to rest with the Irish government or whether decisions in the areas concerned should be taken jointly with the EU. In thirteen out of

nineteen policy areas, the balance of Irish opinion favoured joint decision-making with the EU (see Fig.2). Support for joint decision-making with the EU is highest in relation to fighting terrorism (76 per cent expressing the view that decisions in should be taken in conjunction with the EU), in relation to support for the regions (74 per cent) and in relation to scientific and technological research (74 per cent).

There is also substantial support among Irish people for decisions in relation to energy policy (69 per cent), environmental policy (65 per cent), defence and foreign affairs (61 per cent) and immigration policy (60 per cent) to be taken jointly with the EU. The level of support for EU decision-making in relation to defence and foreign affairs policy is noteworthy and is something that will be taken up in more detail later in this report.

In the six other policy areas considered, Irish respondents expressed a preference for policy decisions to be made by the national government. In the areas of education (68 per cent), pensions (61 per cent), health and social welfare (61 per cent) and tax (60 per cent), a majority of Irish people stated a preference for decisions in these domains to be taken by the Irish government.

On the issue of crime, Irish public opinion is evenly split on whether the EU should play a more expansive role in this policy area. This has a bearing on current debate in that since the completion of the fieldwork for *Eurobarometer 67.2*, the Irish government has decided to approach EU policing and criminal justice co-operation procedures on a case by case basis. While 46 per cent of Irish respondents believe decision-making power should rest with the Irish government, 48 per cent of people now believe decision making in this area should be jointly with the EU. Conversely, EU respondents are more inclined to view crime as a trans-national issue with 61 per cent of respondents favouring joint decision-making with the EU. One possible explanation as to why Irish responses in this area diverge from the EU average is simply that Ireland is an island and as a result crime is seen in national or all-Ireland terms as much as it is seen as a trans-national issue.

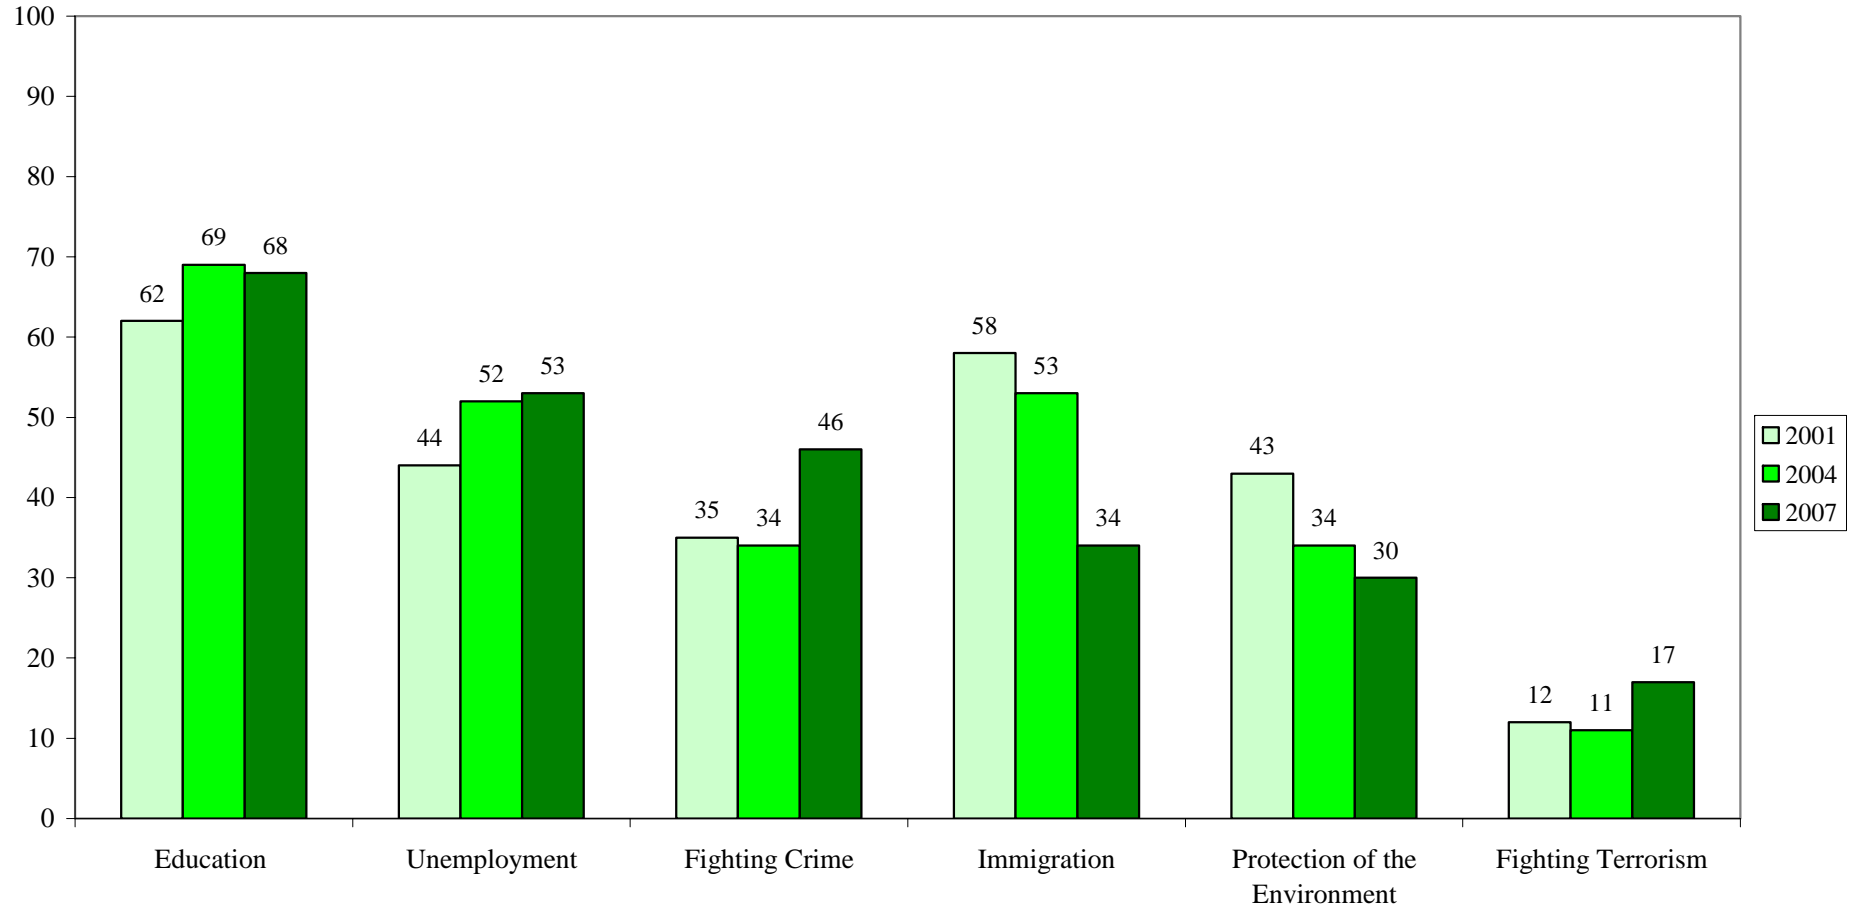

Figure 3 shows how Irish people's attitude to European involvement in decision making in certain policy areas has developed in recent years. In autumn 2007 a majority of Irish people expressed the view that decisions relating to protection of the environment and immigration should be made in conjunction with the EU.

**Figure 2 Attribution of decision-making on policy issues: Ireland Autumn 2007**  
*(in descending order of Jointly with the EU)*

Source: EB 68.1, QA20a 'For each of the following areas, do you think that decisions should be made by the (NATIONALITY) government or made jointly with the European Union?'

**Figure 3 Attribution of decision-making to the National Government: selected issues Ireland 2001-2007**  
(in descending order of 2007)

Source: EB 56, 62 & 68.1

Sixty-five per cent favoured joint decision-making with the EU in relation to the environment while only 60 per cent did so in relation to immigration. This represents a substantial change on views expressed in 2001 when a majority of Irish respondents felt that policy decisions in the area of immigration should be taken by the Irish government and a substantial minority felt the Irish government should take decisions in relation to the environment. There has also been a shift in the other direction in the policy area of unemployment with more Irish people today (53 per cent) believing that the national government should take responsibility for decision-making in this area compared to the views expressed in 2001 where only 44 per cent favoured this.

### *Policy evaluation*

A substantial number of Irish people have a neutral view or no view at all as to whether the EU plays a positive or negative role in certain policy areas (see Fig.4). Thus, 52 per cent of Irish respondents are either indifferent or do not know if the EU plays a positive role or not in tax policy, somewhat of a surprise considering the fact that mooted European initiatives on corporation profits tax have been previously greeted with considerable resistance amid substantial publicity. Irish respondents also exhibit high levels of indifference as to whether the EU plays a positive role or not in defence and foreign policy (46 per cent). There was similar levels of indifference/do not know responses from Irish people about the EU's role in fighting terrorism (38 per cent were indifferent/did not know) or in protecting the environment (37 per cent of people were indifferent/did not know). But Irish respondents are not alone as the same trend is exhibited by European respondents as a whole. Fifty-seven per cent of EU respondents were indifferent or did not know whether the EU had a positive effect or not on tax. Just over two fifths (41 per cent) of EU respondents as a whole were indifferent or did not know about the EU's role in economic policy, while 40 per cent had the same view in relation to defence and foreign affairs and 34 per cent in relation to protecting the environment.

Given the levels of don't know and neutral responses just noted, evaluation of decisions/actions taken by the EU is best assessed by subtracting the proportions of negative responses from the proportion of positive responses for each policy item (see Fig.5). This shows that Irish people consider that the EU plays its most positive role in protecting the environment with a net evaluation of plus 33 points.

**Figure 4 Indifference in evaluation of positive/negative role of the EU in policy: Ireland Autumn 2007**  
*(in descending order of 'neither positive nor negative role' responses)*

Source: EB 68.1, QA21 For each of the following issues in (OUR COUNTRY), do you think that the European Union plays a positive role, a negative role, a neither psotive nor negative role?

**Figure 5 Net evaluation (positive minus negative responses) of the role the EU plays in policy:  
Ireland Autumn 2007**  
(in descending order of positive view)

Source: EB 68.1, QA21 For each of the following issues in (OUR COUNTRY), do you think that the European Union plays a positive role, a negative role, a neither psotive nor negative role?'

They also believe that the EU plays a positive role in the economy (29 point positive assessment), fighting terrorism and in defence and foreign affairs (20 point positive assessment).

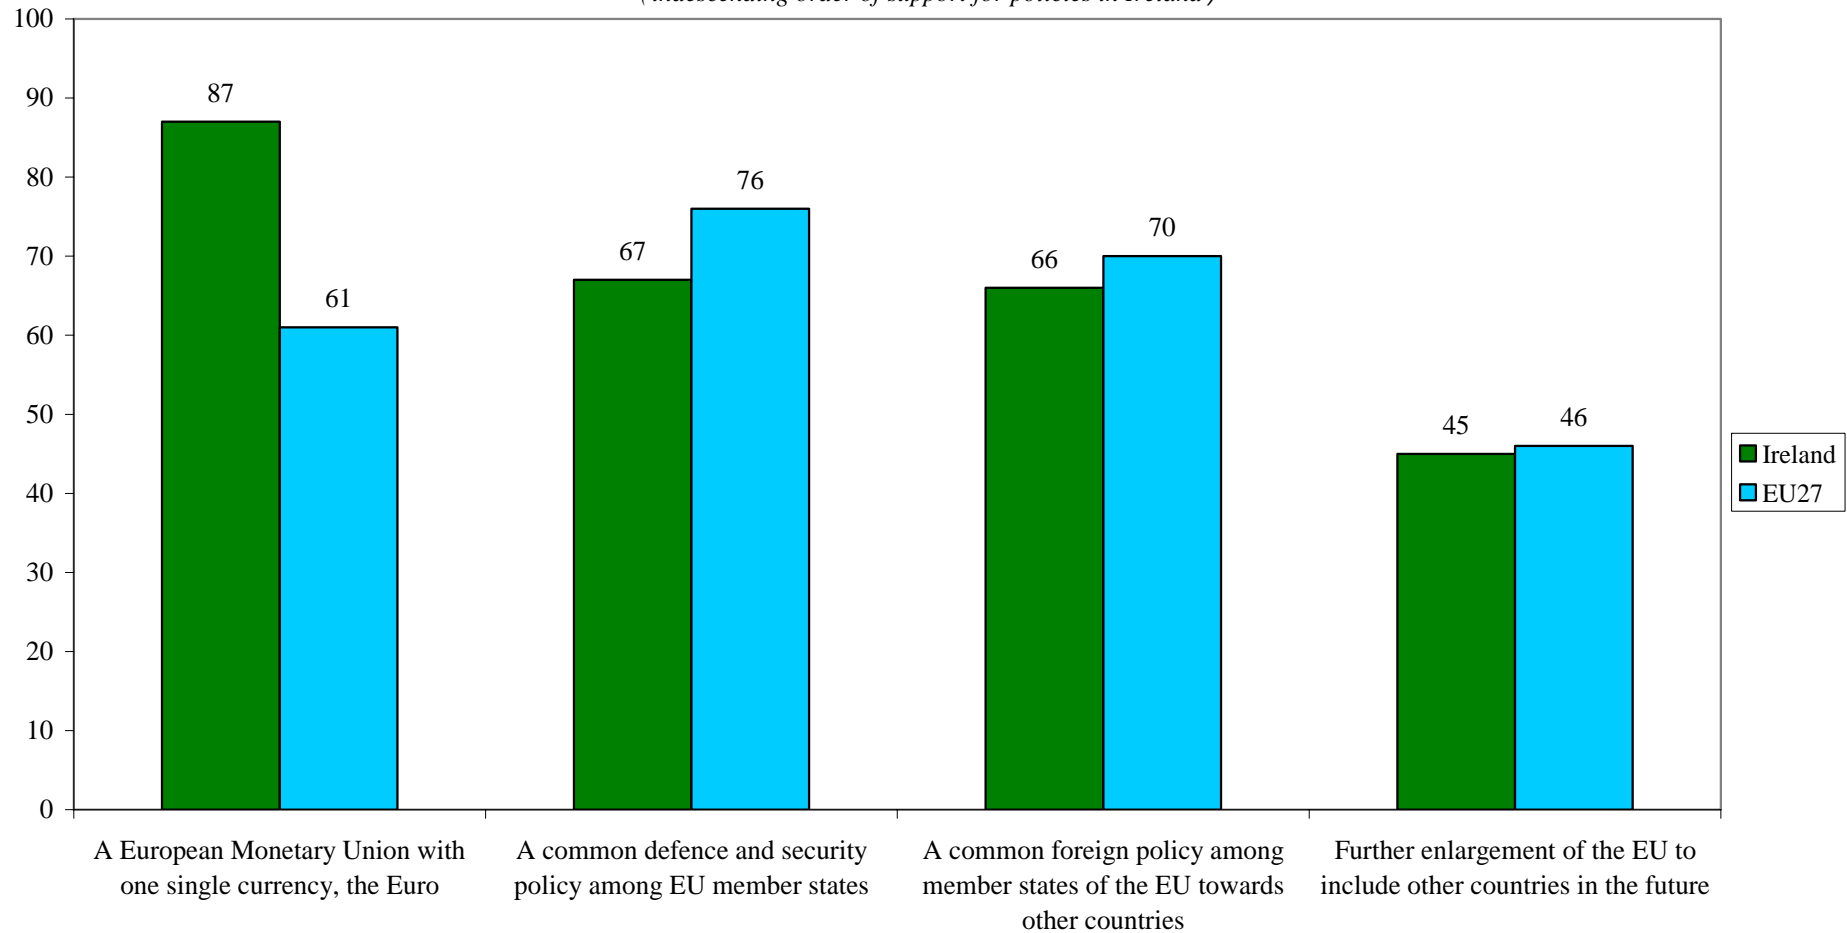

On a comparative scale Irish peoples' assessment in relation to the environment is similar to the EU average but the positive assessments are significantly below some other European states. For example, Irish peoples' positive perception of the EU's role in environment policy substantially lags behind the Benelux countries. Here Luxembourg has a 56 percentage point positive assessment, Belgium a 54 percentage point positive assessment and the Netherlands a 53 percentage point positive assessment.

Meanwhile healthcare is the policy area where Irish people think the EU has its least positive effect. Irish people have a very negative evaluation of the EU's role on health policy with a minus 18 percentage point assessment, a strong divergence with the EU average where there was a minus 2 percentage point score on the assessment scale. This is probably a reflection of the fact that Irish people tend to consider health as a national issue rather than a European one.

In addition to asking respondents to evaluate the role of the EU across the wide range of policies just considered, *Eurobarometer 68.1* also sought responses on four big issues that are central to the development of the Union, namely EMU, a common foreign policy, a common defence and security policy and enlargement. As we shall see in a moment Irish attitudes to three of these issues ranges from moderately to highly positive and on the fourth, they are identical to the European average (see Fig.6).

*EMU*: Six years after adoption of the single currency, Irish peoples' support for EMU is the highest in Europe with 87 per cent favouring the single currency Slovenia (which adopted the Euro in January 2007) and the Benelux countries have comparable levels of enthusiasm for the single currency. However, there is much less support for monetary union across the EU as a whole with only 61 per cent of EU respondents expressing support for it. British respondents are the most sceptical about the Euro with less than a quarter (24 per cent) in support and a substantial 67 per cent in opposition to it. However, scepticism towards the single currency is mostly confined to countries that have not adopted it.

**Figure 6 Support for major European Union policies: Ireland v EU27 Autumn 2007**  
(*indescending order of support for policies in Ireland*)

Source: EB 68.1, QA22

Meanwhile, there is majority support in the thirteen countries that use the Euro as their currency with support for the currency in the Eurozone states at an average of 73 per cent.

*Common Foreign and Defence & Security policy:* Respondents were also asked about whether they favoured the development of a common foreign policy and a common defence and security policy among member states of the EU towards other countries. Among Irish respondents, 67 per cent favoured the development of a defence and security policy and 66 per cent favoured a common foreign policy which puts them slightly lower than average European support where 76 per cent are in favour of a common defence pact and 70 per cent favour a common EU foreign policy. Only 15 and 13 per cent of Irish respondents were against such policies. These views need to be taken into account in assessing the extent and nature of public support for Irish neutrality. This finding is compatible though with the earlier finding that Irish people favour the EU having a decision-making role in regard to foreign and defence policy.

*Enlargement:* Irish support for further enlargement is comparatively low. Irish enthusiasm is among the seventh lowest in the Europe. Only 45 per cent of Irish people favour further expansion of the Union. Support for further enlargement tends to be highest in new member states such as Poland and Lithuania where 76 per cent and 67 per cent of people respectively favouring further expansion. Support for enlargement is lowest in Western Europe most of all in Luxembourg and Germany (two founder members of the EEC in 1957) where only 25 per cent and 28 per cent of respondents in each respective country favour new members joining whereas two thirds are against such a course of action. At 45 per cent, Irish attitudes are practically identical to average European attitudes.

## **The Political Climate: Trust in political institutions & the media and policy preoccupations**

### *Trust in political institutions & the media*

The first point to note in this regard is that trust in political institutions, both European and national, is a vital aspect of the context in which the ratification of an EU treaty takes place. This is so whether the ratification is through decision by a country's

legislative process or by direct consultation of the people via a referendum. It could be argued indeed that trust in institutions is more important in the former case as, in such cases, the decision and responsibility lies with the institution rather than with the people. It is also possible, however, that in the case of decision by referendum, the level of trust in institutions can have some influence on peoples' decisions.

Irish people show a higher level of trust in European political institutions than domestic institutions (see Fig.7). On a consistent basis the most trusted political institution among Irish people is the European Parliament with 63 per cent of respondents professing trust in this Eurobarometer. This is followed closely by the European Commission with trust in that institution currently at 60 per cent. Ironically, the EU institution that commands the lowest level of trust among Irish respondents is the Council of the European Union (the Council of Ministers), the institution that is most influential. Trust in this institution lags significantly behind the other two European institutions and currently stands at 50 per cent, marginally above the current EU average of 44 per cent. However, there has also been a consistently high level of 'don't know' responses to this question about the Council (38 per cent of Irish respondents said they did not know whether they had trust in the Council of the European Union or not in this Eurobarometer wave), a point best explained by respondents lack of familiarity with the Council of the European Union and its functions.

The lowest levels of trust in political institutions relate to political parties with trust in them currently at 22 per cent, a figure identical to the current European average. Before concluding that this is a mark of widespread disillusion with the political process one should note that the low level of trust in political parties is just as consistent with the idea of 'the critical citizen' watchfully eyeing the actions of those in power. Trust in the Dáil and the Government is remarkably similar with both within two to three percentage points of each other (currently, 33 per cent of people profess trust in the Dáil and 32 per cent in the government). One explanation for this notable similarity is that the Dáil and the Government are understood by respondents to mean basically the same thing. It also must be acknowledged that peoples trust in the government (and by association the Dáil) can be determined by respondents' partisanship for or against the government of

**Figure 7 Trust in Political Institutions: Ireland and EU27 Autumn 2007**  
(in descending order of trust levels in Ireland)

Source: EB 68.1, QA8, 'For each of the following institutions, please tell me if you tend to trust it or tend not trust it?'

**Figure 8 Trust in the Media: Ireland and EU27 Autumn 2007**  
(in descending order of trust levels in Ireland)

Source: EB 68.1, QA8, 'For each of the following institutions, please tell me if you tend to trust it or tend not trust it?'

the day. As with trust in political parties, trust in the national parliament and the government is on par with the European norm. However, this means that Irish peoples trust in the national parliament still lags behind some countries, for example Scandinavia. In Denmark, 74 per cent of Danes profess trust in the Folketingets (Danish Parliament) while 65 per cent of Finns express trust in the Eduskunta (Finnish Parliament).

The media provide channels through which what political institutions, political organizations and individual politicians say and do is communicated to the people. The effectiveness of that communication is likely to vary according to the sector of the media involved. This is because there is a large difference in the levels of trust that Irish people invest in the print and broadcast media (see Fig.8).

For Irish people, radio and television are the most trusted sections of the media with 68 and 64 per cent of people respectively expressing trust in these outlets. Taking a comparative perspective, Irish people place more trust in these two institutions than their European counterparts with trust in radio eight points higher and trust in television twelve points higher than the EU average. Trust levels in the print media are considerably lower than in the broadcast media. However, there is no marked difference between Ireland and the EU as a whole on this point with Ireland's trust level just four points less than the European average of 44 per cent at 40 per cent.

Levels of trust in the internet still remain low among Irish people at 32 per cent but this is coupled with high levels of 'don't know' responses, a similar trend is apparent across Europe. As stated in earlier reports, this is probably a consequence of the fact that the internet is a relatively new form of media outlet and in the main a substantial segment of Irish society remains unfamiliar with or has minimal access to it. There may also be a non-political explanation to this as people may be sceptical about aspects of the internet's content.

In conclusion, Irish people have high levels of trust in the broadcast media, higher than their EU counterparts. However, there is significantly less trust in the Irish print media. There is also little trust in the internet but this is probably because of the fact that many people say they do not know if they trust it or not, probably an acknowledgement of the fact that many people do not use the internet and others are suspicious of its content.

**Figure 9 Most Important Issues: Ireland Autumn 2007**

*(in descending order of most important issue Autumn 2007)*

Source: EB 59, 60.1 & 68.1, QA6a 'What do you think are the two most important issues facing (OUR COUNTRY) at the moment?'

### *Policy Preoccupations in Ireland and Europe*

In addition to these institutional aspects, the political climate in which EU treaty ratification takes place includes the policy preoccupations of the public in different countries. When people are asked what the two most important issues facing the country at the moment are, Irish respondents have a very different set of policy priorities compared to the European average. As Figure 9 shows Irish people are more concerned with crime and health whilst European respondents are preoccupied with the economy.

The three most important issues for Irish people in autumn 2007 were crime (57 per cent), health (45 per cent) and quite a long way behind inflation (22 per cent). For Europeans on the other hand the most important issue is unemployment (27 per cent), followed by rising prices/inflation (26 per cent) and crime (24 per cent). The very high Irish figures for concern with crime and health represent significant increases since 2003 (see Fig.10). Over the same period concern with economic issues has tended to abate. Other issues of importance to the Irish respondents include housing (14 per cent) and immigration (14 per cent). The rate of concern with immigration has increased by six percentage points since 2003.

### **Determinants of attitudes to the EU**

The attitudes to European integration described above are the product of many influences, ranging from the basic socio-demographic characteristics of the individual to his or her economic experiences and expectations, sense of identity, policy preferences etc... While a comprehensive account of these influences that would take cognisance of their interactive or multivariate aspect is beyond the scope of this report, a more limited item-by-item analysis will help to highlight at least some of the sources of people's responses to the European project.

The first step in undertaking this analysis is to select as the "dependent variable an appropriate summary indicator of attitudes to the Union". For this purpose we have taken responses to the Eurobarometer 'image of Europe' question, which runs as follows: "In general, does the European Union conjure up for you a very positive, fairly positive, neutral, fairly negative or very negative image?". The overall distributions of responses to this question in Ireland and Europe are presented in Fig.11.

**Figure 11 Images of the European Union: Ireland v EU27 Autumn 2007**

*inner pie: Ireland, outer pie: EU27*

Source: EB 68.1, QA14 'In general does the European Union conjure up for you a very positive, fairly positive, neutral, fairly negative or very negative image?'

These responses confirm the strong contrast between Irish attitudes and average European attitudes already identified in this paper. Thus, while 69 per cent of Irish respondents have a very or fairly positive image of the Union only 49 per cent of European respondents as a whole share this positive view. However, responses to this question also lead to some qualification as to the nature and extent of support for integration suggested by, for example, the ‘membership’ indicator. The latter showed that 74 per cent of Irish people take the view that Ireland’s membership of the European Union is a good thing (see Fig.1).

But the responses to the image indicator show that the large body of support for integration evident in the membership and in various other indicators in fact comprises a relatively small body of strong support and a much larger body of more tentative or qualified support. Thus, as Figure 11 shows, the widespread positive Irish image of the Union consists of just 21 per cent of respondents who have a very positive image and 49 per cent for whom the image is only fairly positive. This confirms that, while in excess of two-thirds of Irish people are positively disposed towards the Union, the bulk of that support is not unqualified.

And so to the question of what determines or at least what correlates with variations in Irish people’s image of the European Union. We begin with the basic socio-demographic factors namely, as the traditional formulation puts it, “age, sex and status” (see Table 1).

### *Age*

Variation in image of the EU across the generations is very limited, there being some tendency for the youngest age group (18-29) to be more favourably disposed than those in their fifties, the difference being just less than 10 percentage points. The significance of these relatively small differences in attitude could, however, be amplified in a referendum by the greater propensity of older people to turn out to vote.

### *Sex*

As with generational differences, variation in image of Europe between the sexes is also very modest. Whereas 73 per cent of men have a very or rather positive image of the European Union, the corresponding figure for women is 66 per cent. Note however that there is no corresponding difference between men and women in the rate of occurrence of a negative image of the EU – 8 per cent of men and 7 per cent of

women show up in this negative category. So how come women are less positive but not more negative in their image of the EU? The answer lies in the neutral/don't know responses and in the slightly greater tendency for women to place themselves in one or other of these. This results in 27 per cent neutral/don't-know responses among women compared to 20 per cent among men.

### *Status*

Socio-economic status comprises a complex set of characteristics that are not easily measured. However indicators of two aspects of socio-economic status – occupation and education – are included in the Eurobarometer surveys and provide some basis for examining the relationship between status and attitudes to European integration. The highest frequency of positive image is found among managers (88 per cent), then among the self-employed (80 per cent) and other white collar workers (76 per cent),

*Table 1* Correlates of attitudes to the European Union: socio-demographics

		Positive image	Negative image	Neither positive nor negative	DK	Total
<b>Age</b>						
18-29	(%)	74	6	18	2	100
30-39	(%)	69	5	21	5	100
40-49	(%)	68	8	19	5	100
50-59	(%)	65	9	21	5	100
60-69	(%)	71	12	12	5	100
70+	(%)	65	6	21	7	100
<b>Sex</b>						
Male	(%)	73	8	17	2	100
Female	(%)	66	7	20	7	100
<b>Respondent occupation</b>						
Self-employed	(%)	80	8	10	2	100
Managers	(%)	88	1	10	1	100
Other white collars	(%)	76	6	19	0	100
Manual workers	(%)	64	8	22	6	100
Unemployed	(%)	42	13	42	3	100
Students	(%)	86	2	9	3	100
Retired/House persons	(%)	62	9	21	8	100
<b>Education (year ended)</b>						
Under 16	(%)	57	13	22	8	100
17-18	(%)	73	4	20	3	100
19-22	(%)	85	3	11	1	100
23+	(%)	82	5	13	0	100

dropping to 64 per cent among manual worker and 42 per cent among the unemployed. The evidence of differences in image of the EU by occupation is reinforced by the data on education. The educational data are in the form of the age at which respondents completed school. From this we can create an approximation to three educational categories – those with vocational or incomplete secondary education or less (i.e. left school at 16 or younger), those with complete secondary (left aged 17 or 18) and those with at least some third level education. Occurrence of a positive image of the European Union rises from just below 60 per cent among those with incomplete secondary education or less to 77 per cent among those who finished school at 17 or 18 and to 83 per cent among those with some third level education. When this educational evidence is combined with the data on occupational differences, it is clear that image of the EU varies significantly depending on socio-economic status. In sum, the better-off, the more middle class, and the better educated a person is the more likely he or she is to have a positive image of the EU. The status-based differences involved, while not overwhelming, are greater than those between the sexes and between the generations.

The foregoing socio-demographic factors are not subject to change in the short term. However, other socio-economic factors that are more a matter of current perceptions and experiences are more variable. One such is perception of the national economy. In Ireland, this was exceptionally high in 2005 and 2006 and up to spring 2007 (see Fig.12). However in autumn 2007, the positive evaluation of the economy dropped from 89 per cent to 76 per cent and negative evaluations rose from 9 per cent to 21 per cent. The question is: do these attitudes affect responses to the EU? The answer is that positive/negative attitudes to the economy are certainly correlated with attitudes to integration. As Table 2 shows, a positive image of the Union is found among 77 per cent of those who think the situation of the Irish economy is very good or rather good, whereas this perception falls to 47 per cent among those who think the economic situation is rather bad and to 27 per cent among the small minority who believe the economy is going down the tube (i.e.: among the 5 per cent who say that the situation of the Irish economy is very bad). In the light of this it is entirely possible that a major shift in positive/negative views of the economy would be reflected in diminished support for integration.

**Figure 12 Irish & EU evaluations of current economic situation in own country: 2004-2007**

Source: EB 62, 63, 66, 67.2 & 68.1: QA4\_1 'How would you judge the current situation of the (NATIONALITY) economy?'

In addition to or perhaps instead of being affected by the foregoing demographic and socio-economic factors, people's perceptions of and attitudes to the European Union may well be related to more political aspects of their outlook. Here we consider three such factors – identity, ideology and knowledge of Europe.

#### *National identity*

A common assumption about national identity and support for European integration is to assume that the stronger the former, the weaker the latter, i.e. that there is a zero-sum relationship between having a strong national identity and taking a positive view of European integration. The data show that this is not the case. In fact the relationship goes in the opposite direction – the stronger the sense of attachment to Ireland, the more positive the image of Europe. And the differences are fairly substantial, positive image of the EU being found among only 49 per cent of those who feel not at all or not very attached to Ireland. However, positive image rises to 65 per cent among those fairly attached and to 74 per cent among those very attached.

#### *European identity*

Positive/negative images of the EU depend even more on a sense of European identity. Whereas 94 per cent of those who feel very attached to Europe have a positive image of the Union this drops to 84 per cent among those who feel fairly attached, to 63 per cent among those not very attached and to 36 per cent among those who feel completely unattached to the European Union.

From the point of view of the referendum, the significance of this strong relationship lies in the fact that there are substantial numbers of Irish people on the lower end of the scale of European attachment. This is in stark contrast to the distribution of attachment to Ireland. As Figure 13 shows, 46 per cent of Irish people have little or no sense of European identity whereas only 5 per cent feel likewise about attachment to Ireland.

#### *Knowledge*

Images of the EU are also affected by people's knowledge of European affairs. *Eurobarometer 68.1* fielded three questions about people's knowledge in this area

**Figure 13 Irish attitudes to identity Autumn 2007**  
*inner pie: attachment to Ireland, outer pie: attachment to European Union*

Source: EB 68.1, QA10\_2 & QA10\_4, 'Please tell me how attached you feel to (OUR COUNTRY) & The European Union?'

(relating to the number of member states, the number of member states in the Eurozone and the institution of the rotating presidency of the Union<sup>6</sup>). The decisive factor appears to be whether or not one knows anything at all or nothing at all about these three topics. Thus there are only minor differences image of the EU depending on whether one gets one, two or three questions right. The key factor is whether one gets any right at all, with positive image of the Union falling to 50 per cent among those giving no correct answers, compared to 75 per cent among those giving correct answers to one or two questions and 81 per cent positive image among those answering all three questions correctly.

*Table 2* Correlates of attitudes to the European Union: economic perceptions, identity and knowledge

<sup>6</sup> Source: EB 68.1 QA17 – see appendix B.

The fact that the know-nothing group amounts to 28 per cent of respondents makes level of knowledge of the Union a potentially important factor in persuading people to vote ‘yes’ or ‘no’ in the forthcoming referendum. This view is reinforced when we examine people’s subjective assessment of their understanding of how the European Union works. Thus, while 83 per cent of those who feel comfortable about their knowledge of European affairs have a positive image of the EU, this drops to 61 per cent among those who do not feel that they understand how the Union works. Unlike such factors as identity or even perceptions of the economy (both of which may be difficult to change in the short term), the knowledge factor is something that can be worked on in the course of a referendum campaign. The potential impact of such efforts is increased by the fact that lack of knowledge and understanding of the EU tends to be associated not with negative images of the EU, but with adopting a neutral/don’t know stance. This increases the likelihood that an improvement in the knowledge of such people would tip them into the positive-attitude camp.

## **Conclusion**

The evidence from *Eurobarometer 68.1* confirms the proposition that Irish public opinion is widely supportive of Ireland’s membership of the European Union. However, the evidence also shows that strong or enthusiastic support for integration is much less widespread. Furthermore, in relation to many policy issues on which public opinion attributes competence to the Union, there are very high levels of don’t know or neutral responses and/or the issues concerned are of low salience. Take environmental policy for example. A large majority believe that environmental policy issues should be decided jointly within the European Union rather than by national governments (in this case the Irish government). Moreover, the balance of Irish opinion on the role the EU plays in protecting the environment is highly positive. However, 37 per cent of people have no view on whether the EU plays a positive or negative role in protecting the environment. In any event, people’s main policy concerns are with the health system and crime and only 4 per cent of people regard environmental protection as being among the two most important issues facing Ireland at the present time. All of this implies that, while Irish attitudes to the European Union are positive, there is a substantial lack of engagement with European issues.

When it comes to a referendum on a European treaty, political leaders, activists and organizations and groups on both sides of the debate have to work that bit harder to inform people on the issues and to mobilize them to get out and vote. One must also bear in mind that the Irish debate on European issues takes place in a political climate characterised by low levels of trust in domestic political institutions, especially in political parties. Trust in the latter is just over 20 per cent whereas trust in the government and in the Dáil (the national parliament) is slightly better at 32 and 33 per cent respectively. However, before leaping to the conclusion that it would be next to impossible to pass a referendum in such circumstances one should note three points. First, these levels of trust are no different from those obtaining when the second referendum on the Nice Treaty was passed in 2002 or when the first Nice referendum was defeated in 2001. This underlines the point that referendums are not plebiscites on domestic political issues. In the political science jargon, they are not necessarily ‘second-order elections’. Secondly, lack of trust in political institutions may be a sign of critical rather than alienated citizens and a reflection of the effective working of the fundamental checks and balances in the political system. Thirdly, the levels of trust in the Irish case are identical to those found in the European member-states and so are nothing special. This last observation might, however, meet with the riposte that the average European member state is not holding a referendum on the Lisbon Treaty.

In commenting on low levels of trust in national institutions, one should note the quite high levels of trust in European institutions, which comes out at 63 per cent for the European Parliament, 60 per cent for the European Commission, 55 per cent for the Union as a whole and 50 per cent for the Council of the European Union. One should also note that each of these numbers is significantly higher than the corresponding European average. Overall one can conclude that, while low levels of trust in politics may make things a bit more uncomfortable for politicians campaigning on the door-step, there is no evidence to suggest that the outcome of the referendum will be decided by attitudes to domestic politics.

The other aspect of the climate or context in which the referendum will take place is Irish people’s attitudes to and experiences of the media. *Eurobarometer 68.1* confirms previous findings of much higher levels of trust in radio and television compared to trust in newspapers. The differences really are quite big – 68 percent

trust radio, 64 per cent TV, but only 40 per cent trust the press. Whatever the reason may be, it seems that messages coming from radio and television will, other things being equal, carry greater credibility. One can assume that this will have already been factored into the calculations and strategies of experienced election and referendum campaigners.

In designing their strategies, campaigners on both sides will also need to know the breakdown of attitudes to Europe by socio-demographic factors and, perhaps more importantly, by different perceptions of and attitudes to the European project. Taking image of the EU (positive or negative) as the indicator of attitudes to European integration, one can conclude that there is very little variation by age, though young people are slightly more positive than the middle aged. There is also a small but significant difference between the sexes, women being fractionally less positive.

Status, as measured by occupation and education, is associated with bigger contrasts in positive/negative image of the EU. The highest frequency of positive image is found among managers (88 per cent), then among the self-employed (80 per cent) and other white collar workers, dropping to 64 per cent among manual worker and 42 per cent among the unemployed.

Educational differences confirm these social status contrasts – positive image of the EU goes from just under 60 per cent among those whose full time education stopped at age 16 or less to 73 per cent among those leaving school at 17 or 18 and to over 80 per cent among those whose education continued to age 19 or more.

In terms of political attitudes, positive/negative image of the EU is associated with perceptions of the state of the Irish economy, with sense of national identity (the stronger the national identity, the more positive the image of the EU), with European identity, with having or not having at least some knowledge of the EU and, on a subjective scale, with a feeling that one understands the way the EU works.

The evidence presented in this report suggests that the challenge to the ‘yes’ camp in the forthcoming referendum on the Lisbon Treaty is that of mobilizing the underlying widespread positive attitudes to integration that are characteristic of Irish public opinion. Mobilization here means giving people a reason to want to vote in the referendum. The problem is that, while support for European integration is

widespread, it varies in strength or intensity. The approximately 65 to 75 per cent majority that takes a positive view of European integration is in fact made up of a minority of people who are strongly committed to integration and a majority who are favourably disposed but not strongly committed. Failure to mobilise this major swathe of 'soft' support had a dramatic effect on the outcome of the first Nice referendum back in 2001. The present report identifies some of the socio-demographic and attitudinal factors affecting the prospects of such mobilization that both the 'yes' and the 'no' campaigns will be paying attention to in the coming months.

## **STANDARD EUROBAROMETER 68 TECHNICAL SPECIFICATIONS**

Between the 22<sup>nd</sup> of September and the 3<sup>rd</sup> of November 2007, TNS Opinion & Social, a consortium created between Taylor Nelson Sofres and EOS Gallup Europe, carried out wave 68.1 of the EUROBAROMETER, on request of the EUROPEAN COMMISSION, Directorate-General for Communication, "Research and Political Analysis".

The "STANDARD" EUROBAROMETER 68 is part of wave 68.1 and covers the population of the respective nationalities of the European Union Member States, resident in each of the Member States and aged 15 years and over. The "STANDARD" EUROBAROMETER 68 has also been conducted in the three candidate countries (Croatia, Turkey and the Former Yugoslav Republic of Macedonia) and in the Turkish Cypriot Community. In these countries, the survey covers the national population of citizens and the population of citizens of all the European Union Member States that are residents in these countries and have a sufficient command of the national languages to answer the questionnaire. The basic sample design applied in all states is a multi-stage, random (probability) one. In each country, a number of sampling points was drawn with probability proportional to population size (for a total coverage of the country) and to population density.

In order to do so, the sampling points were drawn systematically from each of the "administrative regional units", after stratification by individual unit and type of area. They thus represent the whole territory of the countries surveyed according to the EUROSTAT NUTS II (or equivalent) and according to the distribution of the resident population of the respective nationalities in terms of metropolitan, urban and rural areas. In each of the selected sampling points, a starting address was drawn, at random. Further addresses (every Nth address) were selected by standard "random route" procedures, from the initial address. In each household, the respondent was drawn, at random (following the "closest birthday rule"). All interviews were conducted face-to-face in people's homes and in the appropriate national language. As far as the data capture is concerned, CAPI (*Computer Assisted Personal Interview*) was used in those countries where this technique was available.

<b>TOTAL</b>			<b>30.281</b>	<b>22/09/2007</b>	<b>03/11/2007</b>	<b>446.002.288</b>

For each country a comparison between the sample and the universe was carried out. The Universe description was derived from Eurostat population data or from national statistics offices. For all countries surveyed, a national weighting procedure, using marginal and intercellular weighting, was carried out based on this Universe description. In all countries, gender, age, region and size of locality were introduced in the iteration procedure. For international weighting (i.e. EU averages), TNS Opinion & Social applies the official population figures as provided by EUROSTAT or national statistic offices. The total population figures for input in this post-weighting procedure are listed above.

Readers are reminded that survey results are estimations, the accuracy of which, everything being equal, rests upon the sample size and upon the observed percentage. With samples of about 1,000 interviews, the real percentages vary within the following confidence limits:

<b>Observed percentages</b>	10% or 90%	20% or 80%	30% or 70%	40% or 60%	50%
<b>Confidence limits</b>	± 1.9 points	± 2.5 points	± 2.7 points	± 3.0 points	± 3.1 points
