

# A 'First Safe Winner Approach' to support the new Common Fisheries Policy

OCEAN.2011-3

"Assessing and predicting the combined effects of natural and human made pressures in the Mediterranean and the Black Sea in view of their better governance"

NTNU Social Research

7391 Trondheim, Norway

2000-2005: A Norwegian project aiming at changing reality at the Eastern Adriatic (Mediterranean) by developing cross-disciplinary and cross-national collaboration about the management of fishery, aquaculture, tourism and other coastal nature resources

One of the ten project ideas identified concerned the survival of Beluga sturgeons

Releasing Development Potentials at the Coast (the RDPC-project)

Two male beluga sturgeons caught downstream from Iron Gate II in 2001

2009-2011: A Norwegian-Romanian project aiming at changing reality for both the humans and the fishes in the Danube area by developing new sustainable incomes for the locals – from sustainable fishery and sustainable tourism

# BEST COMBAT

The new CFP (with the term 'Resultsbased fisheries') seems to offer (for the first time?) a future also for small-scale fishery in mix with tourism

This give new potentials for fishing communities at the Mediterranean and the Black Sea

With more concern for the outcome for the fishermen - and by their involvement in policy-making - the new CFP will surely be more efficient combating illegal fishery – as here Beluga Sturgeon

*Two male beluga sturgeons caught by poachers in Romania in November 2009*
