Introduction

In comparison to other EU countries, restructuring issues draws limited interest, among social partners, policy makers and mass media in Cyprus. This is due to the particularly limited size, incidence and spatial concentration of restructuring cases in Cyprus and more generally, to the positive performance of the Cypriot economy and labour market during the last decade.

The main reference to restructuring in Cyprus, in the context of public dialogue, is that of the mass relocations that took place in the clothing and footwear sectors during the 1990s, when these industries gradually lost their comparative advantage of low-cost labour. Social and economic consequences from restructuring in manufacturing seem to have been absorbed, to a large extent, by rapid economic and employment growth. This might explain why public authorities did not seem to place any major efforts at the time into seeking alternative competitive strategies based on quality and innovation, in response to the Cypriot garment industry's rapid loss of competitiveness.

Since the beginning of this decade till today, the instances of major company restructuring are limited to only five cases of importance, among which three in "governmental/semi-governmental organisations" (public sector). This is due to the fact that the number of small enterprises in the Cypriot economy is particularly high. This peculiarity hinders the observation and study of restructuring, particularly when enterprises employ less than 20 employees (thus not falling under the provisions of the collective dismissals law).

The current economic crisis did not seem, until recently, to have changed dramatically this situation. In contrast to other European countries, Cyprus has eluded, to a large extent, the repercussions of the global recession. It should be however noted that since August 2009, conditions in the labour market have been worsening, particularly in the tourist and the construction industry.

Outcomes of restructuring have been generally favourable for workers, thanks to favourable economic conditions and the efficiency of the Cypriot system of labour relations. Most negotiations are carried out in an amicable environment without any labour disputes. By and large, workers receive larger sums of compensation than provided by law (ex-gratia payments).

It should be noted however that there are no specific structures in place for the support of workers who lose their jobs as a result of restructuring, (e.g. measures to find alternative employment). In other words, workers who loose their job because of restructuring fall under the same schemes as people loosing their job on an individual basis. The current economic crisis seems to have launched developments in this field, both for public policymakers, but also for businesses and social partners. For this reason, the crisis is likely to evolve into a source of "institutional innovations" concerning anticipation and managing of restructuring and collective dismissals.

1.1 Overview of Cyprus' Economy

1.1.1 A DECADE OF HIGH LEVELS OF ECONOMIC DEVELOPMENT

Throughout the preceding decade, the Cypriot economy expanded at a rate of 3.8% compared to the Euro area's 2.1%. Despite 2002 and 2003, which witnessed some of the lowest performances ever recorded in the last thirty years, the Cypriot economy regained during the last five years (2004-2008) relatively high growth rates (+ 4% annually). More specifically, comparing to the most developed countries in the European Union, based on their annual GNP growth rates between 2002 and 2007, Cyprus came fourth with 3.1%. It is worth pointing out that the equivalent average for all 27 European Union member states amounted to just 2.0%.

GNP Rates of Expansion (%) 1998-2008

Year	1999	2000	2001	2002	2003	2004	2005	2006	2007	2008
Cyprus	4,8	5,0	4,0	2,1	1,9	4,2	3,9	4,1	4,4	3,7
Å.Å-15	3,0	3,9	1,9	1,2	1,2	2,3	1,8	2,9	2,6	0,6

Source: Eurostat

As far as 2007 is concerned, the increase in Cyprus' GNP was one of the best performances in Europe at + 4.4%, in comparison to the European Union's 15 "older" member states. Only Ireland topped Cyprus in 2007, displaying a growth rate of +6%. The equivalent annual increase in the 27 European Union member states amounted to 2.9%.

Regarding 2008, the Cypriot economy's performance proved even more satisfactory, in comparison of course to the economies of the EU-15. Specifically, the Cypriot economy displayed an increase in GNP by 3.7% compared to just 0.9% in the EU-27 and 0.6% in the EU-15.

Development of Basic Long-Term Economic Figures

Figures	Annual Fluctuation (%) in Cyprus	Average Annual Fluctuation (%) 2004-2007					
		2004	2005	2006	2007	Cyprus	ÅU-27
1	GNP	4.2	3.9	4.1	4.4	4.1	2.5
2	Employment	3.3	3.0	2.7	5.8	3.7	1.2
3	Unemployment Rate (%)	4.7	5.3	4.5	3.9	4.6	8.3

Source: Ministry of Labour and Social Welfare, Review of the tendencies of the employment market 2004-2007

1.1.2 BASIC FIGURES OF CYPRUS' LABOUR MARKET

Population and Workforce

According to figures from the Statistical Service of Cyprus, there were 382.852 individuals employed in Cyprus during 2008, of which 212.218 were men and 170.634 were women (in a total population of 758.326). In 2008, active participation in the workforce amounted to 73.1% for men and 55.8% for women. The total percentage of the population over the age of 15 actively engaged in the workforce amounted to 64.2%.

Employment According to Field of Economic Activity

The table below presents the types of economic activities with the highest number of employed during the year 2008.

Employment according to economic activity (2008)

Economic Activity	Number of employed
Wholesale and Retail Trade, Repair of Motor Vehicles and Motorbikes	68.857
Construction	46.217
Manufacturing	37.011
Compulsory Social Security	30,570
Education	27.140
Accommodation Services and Food Industry	25.739
Professional Scientific and Technical Activities	19.933
Financial and Insurance Activities	19.568
Household Activities	16.919
Agriculture, Forestry and Fishing	16.199
Human Health and Social Work	15.677

Source: Statistical Service of Cyprus

Division of Labour According to Worker Category

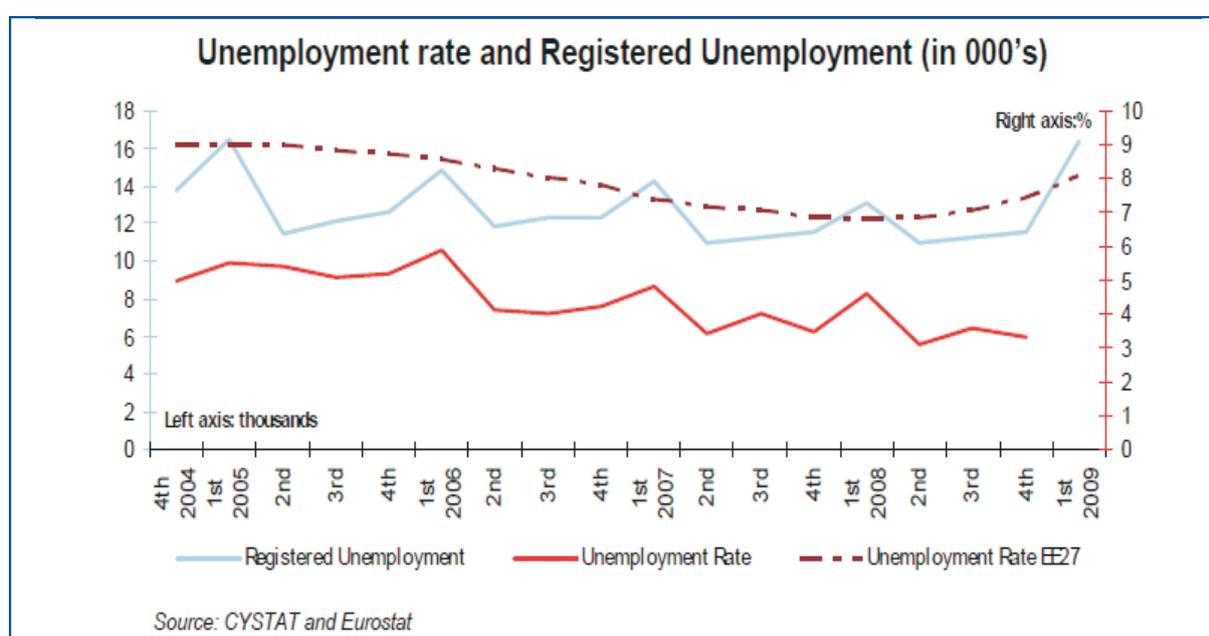

In 2008, out of a total workforce of 382.852 people, 306.488 were employees and 47.989 were self-employed while 21.232 individuals were employers.

Out of a total of 306.488, only 15.208 were part-time workers out of which 11.159 were women. It is worth mentioning that part-time workers are mainly found in wholesale and retail trade, education as well as accommodation and food industries (tourism).

Unemployment in Cyprus

The average unemployment rate in Cyprus during the period 2004-2008 was 4.4%. According to Eliofotou (2008), this fine performance is related to a series of factors such as

- Sustained GDP growth.
- High employment and job creation.
- Congruous labour relations due to a system of tripartite consensus social dialogue.
- An income-friendly tax system with low direct taxation, which has not overburdened labour costs and has thus, supported labour demand.

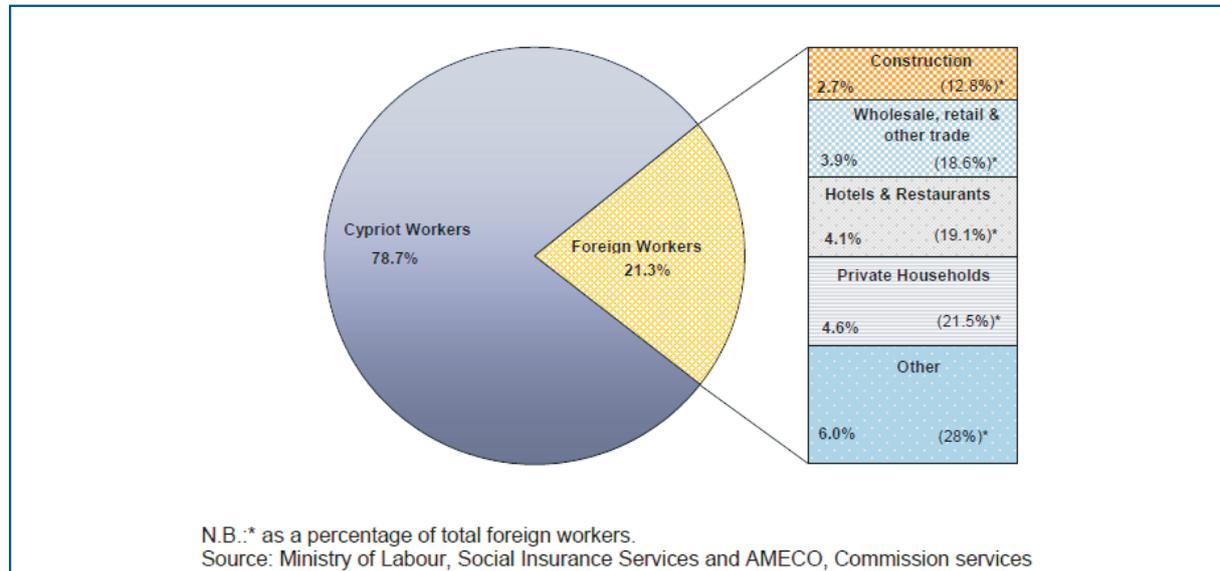

Source: Cyprus Ministry of Finance (2009)

Foreign Workers and Labour Supply Shortages

Over the last decade Cyprus had to deal with shortages in the supply of labour, mainly in low-skill occupations. Labour shortages have been addressed through an increase in working permits issued to foreign nationals, something that has fostered a large-scale influx of immigrants. In total, economic immigrants make up 21% of the entire workforce put together¹. As can be seen in the chart below, apart from being employed in domestic work, economic immigrants work in the tourist industry (hotels and restaurants), in the wholesale and retail trade, and in the construction sector.

¹ This percentage includes undeclared foreign workers.

Distribution of foreign workers in Cyprus by economic activity

Source: Eliofotou (2008)

Unemployment in 2008

The unemployment rate in 2008 was 3.7% (3.2% for men compared to 4.2% for women). The total number of unemployed between the ages of 15-29 was 6.221, that is, 43% of the total amount of unemployed (14.523). On the contrary, the number of unemployed belonging to the 50-and-over age group never exceeded 18% (2.590 individuals). It should be noted that the number of unemployed who have remained without a job placement for longer than one year amounts to just 1.975 people, (that is 13.5% of the total number of unemployed).

1.1.3 CYPRUS TRANSFORMED INTO A SERVICE ECONOMY

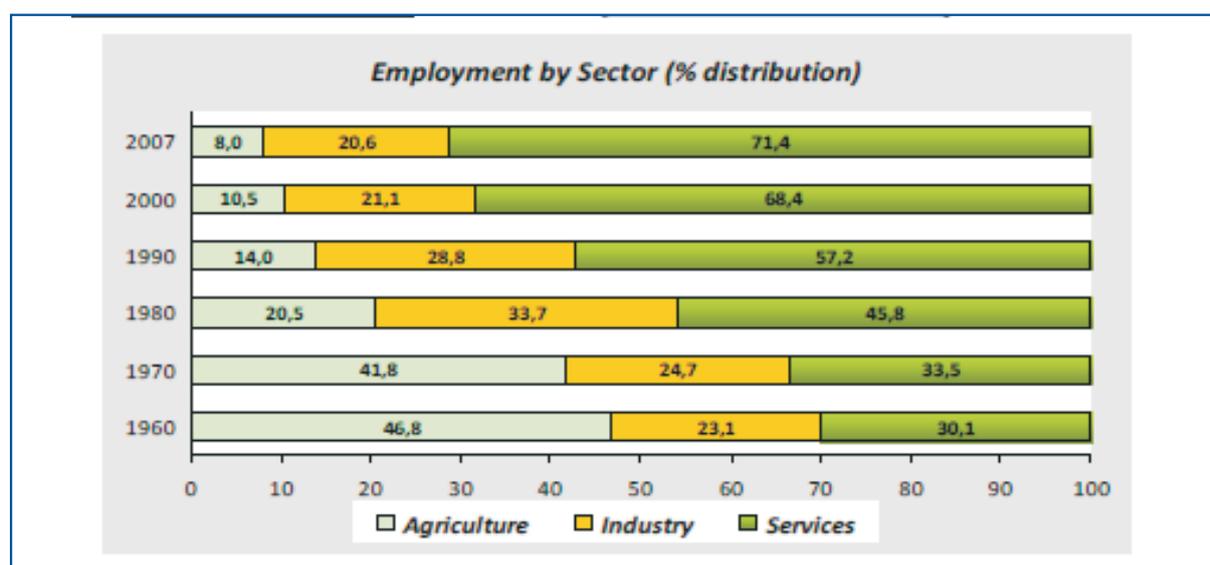

An analysis of the job market according to sector demonstrates the evolution of Cyprus' economy into a service economy. For instance, in 2007, the tertiary sector corresponded to 73.1% of all employment. This development came about on the one hand due to increased employment in the tertiary sector (trade, real estate, tourism, education, health), and on the other hand, due to decreased employment in the agricultural and manufacturing sectors.

As figures of the National Statistical Service of Cyprus bring to light, employment in manufacturing fell by 6.822 job positions (approximately 16%) during the period 1995-2007.

Industrial Statistics (2007) / Employment in Manufacturing 1997-2007

Year	Number employed
1995	44.027
1996	42.207
1997	40.679
1998	39.475
1999	37.904
2000	37.042
2001	37.700
2002	38.077
2003	38.057
2004	37.953
2005	36.976
2006	37.706
2007	37.205

The country's tendency to de-industrialise is particularly evident when examining the figures of the last thirty years. Specifically, the industrial sector used to employ one in three workers (33.7%) in 1980, compared to only one in five (20.6%) in 2007. In brief, the industrial sector shed 40% of its workers during the period 1980-2007. Furthermore, less than half the workforce (45.8%) was employed in services in 1980, compared to 7/10 in 2007 (71.4%). It should be pointed out however that the most significant reduction is to be found in the agricultural sector, occupying 20.5% of all employment in 1980 compared to only 8% in 2007 (that is, a reduction in the order of 60%).

Employment by sector in Cyprus

Source: Eurostat, Cyprus in Figures

According to the figures and estimates of the Ministry of Labour and Social Welfare's last report on the Cypriot job market², economic development during the period 2004-2007 was chiefly beneficial to the services sector, which grew by an extra 36.000 employment positions (the annual rate of development being in the order of 4% approximately). For example, it is estimated that nine out of every 10 new job positions were created in the tertiary sector.

1.1.4 RESTRUCTURING: A RELATIVELY LIMITED PHENOMENON IN CYPRUS

The positive performance of the Cypriot economy and labour market during the last decade could indeed explain the particularly limited size, incidence and spatial concentration of restructuring in Cyprus. The main reference to restructuring in Cyprus, in the context of public dialogue, is undoubtedly that of the mass relocations that took place in the clothing and footwear sectors during the 1990s. The instances of major company restructuring worth mentioning since the beginning of this decade till today are limited to only 5 cases. The current crisis does not seem, until now, to have changed dramatically this situation.

Restructuring and Relocating in the 1990s: the Case of the Clothing and Footwear Sectors

The largest wave of restructuring in Cyprus took place during the decade of the 1990s. It was during this period that the manufacturing industry gradually lost its comparative advantage of low-cost labour. The business activities most affected were the clothing and footwear industries, which have moved production activities abroad, mainly to countries of the Middle East and the Balkans. It should be noted that in 1974 the clothing industry alone employed around 13.000 people, highlighting its decisive contribution to Cyprus's course of development in a time of particularly difficult political, economic and social conditions³. Even as late as 1998, 20% of all people employed in manufacturing, i.e. around 6.500 people, were employed in the clothing and footwear industries (a total of 7.530 workers).

Employment in Manufacturing of Textiles and Textile Products (DB Nace Rev. 1.1)

Year	Number of employed
1995	9.586
1996	8.340
1997	7.215
1998	6.323
1999	4.900
2000	3.839
2001	3.592

² Ministry of Labour and Social Benefits, *Review of tendencies in the employment market 2004-2007*.

³ It should be remembered that following the invasion by Turkish troops in 1974 the unemployment rate shot up to 39% and GDP fell by 1/3 in relation to 1973.

Year	Number of employed
2002	3.224
2003	2.892
2004	2.410
2005	2.025
2006	1.882
2007	1,848

This number fell dramatically to 4.583 in 2000 (-40%) and to just 2.313 in 2005 (-70%). As a result, the clothing industry has ceased to be a source of employment of primary importance for the economy of Cyprus.

By and large, it is estimated that, on the one hand, *higher labour costs* (and the resultant loss of the clothing industry's basic competitive advantage stemming from high growth rates between 1976-1984 and rising living standards) and on the other hand, *the liberalisation of world trade*, have led to increasing competitive pressures, both in the export and in the domestic market (Panayiotopoulos, 2000).

Another decisive factor is the shortage of labour which has compelled companies to import workers from third countries. Indicative of this is the fact that in 1994, foreign labour already represented 14% of employment in the industry.

Firms have been suffering from serious "structural competitiveness" problems (e.g. non compliance with European product specification, lack of innovativeness and quality, lack of skilled employees at all stages of production).

In conclusion, it is estimated that the above factors contributed to create the 'right' conditions for the mass relocation of Cypriot enterprises to countries with low-cost labour in the Balkans and Middle East.

Last but not least, it should be noted that businesses, as equally as public authorities, did not seem to place any serious efforts into seeking alternative competitive strategies based on quality and innovation, in response to the Cypriot garment industry's rapid loss of competitiveness.

Employment in Manufacturing of Leather and Leather Products (1995-2007)

Employment in Manufacturing of Leather and Leather Products (1995-2007)

Year	Number of employed
1995	1.745
1996	1.389
1997	1.364
1998	1.207
1999	829
2000	694
2001	594
2002	566
2003	414
2004	339
2005	288
2006	256
2007	220

Major Restructuring Cases from 2005 until Today

Cases of restructuring in Cyprus during the last five-year period have been exceedingly limited, the most significant nevertheless being⁴:

- 2004 *Refinery of Cyprus* (petroleum products sector).
- 2004-2006 *Cyprus Airways* (national airline).
- 2006 *Arab Bank* (financial credit sector).
- 2006 *BAT* (tobacco industry – relocation).
- 2008 *Ports of Larnaka and Limassol* (port services).
- 2009 (in progress) *Kofinou Slaughterhouse*.

As is evident after a detailed examination of each of these cases⁵, the outcome of the restructuring was generally favourable for workers, thanks to the efficiency of the Cypriot system of social dialogue and favourable economic conditions. It should be stressed that two of the cases above concern organisations of the semi-governmental sector of Cyprus that faced serious competitiveness problems due to the liberalisation of markets after Cyprus' entry into the European Union in 2004.

On the whole, the international financial and economic crisis does not seem, until today, to have changed dramatically the situation of restructuring in Cyprus. As is examined below, the effects of the crisis on the Cypriot economy remain -compared to other EU countries- fairly limited, although situation in the labour market have been worsening rapidly during the past four months.

⁴ Other smaller restructuring cases that have been recorded since 2005 are those of KEO, Vassiliko Ciment Works, Thekona Press Ltd, AC Nielsen, Tsokkos Hotels, Société Générale of Cyprus, etc

⁵ See chapter 4.

1.2 The Limited Impact of the Crisis on the Cyprus Economy

In contrast to other European countries, Cyprus seems to have eluded, to a large extent, the repercussions of the international financial crisis. The Cypriot economy had a 3.8% GDP growth in 2008 and the depth of the recession in 2009 (-0,7%) seems to be limited in comparison to other European economies⁶. In spite of a substantial rise during the last four months (August - November), unemployment in Cyprus during the month of November continued to be low in respect to the Euro area average (6.2 and 10.0 per cent respectively). Overall, these rather positive performances explain why no major cases of restructuring or bankruptcy in Cyprus have been recorded over the past few months, neither after an extensive review of the daily press nor on the basis of interviews conducted with Employer's Unions, Labour Unions or executives at the Ministry of Labour.

1.2.1 RECENT LABOUR MARKET DEVELOPMENTS

As is evident in the table below, the total unemployment rate in Cyprus marked an increase in the order of 2.2% in the period from December 2008 until November 2009. Despite this increase, the rate of unemployment in Cyprus was the fourth lowest in the European Union in November 2009, following Netherlands, Austria and Luxembourg. This performance is particularly positive if one takes under consideration that part-time employment in Cyprus is not widespread at all compared to other member-states. On the basis of the figures of the Statistical Service of Cyprus (adjusted for seasonal variations), the number of registered unemployed in November reached 20.623 persons in recording an increase of 1.6 % compared to the previous month. The trend of the registered unemployed showed a tendency of stabilising from May to July 2009 after following an intensely steep climb during the period December 2008 - April 2009. However, unemployment rose again sharply during the last four months (August to November).

Rate of Unemployment According to Gender (Eurostat)

Total population

Month	Dec. 2008	Jan. 2009	Feb. 2009	Mar. 2009	April 2009	May 2009	June 2009	July 2009	August 2009	Sept. 2009	Oct. 2009	Nov. 2009
Unemployment rate	4.0	4.1	4.3	4.6	5.0	5.2	5.3	5.4	5.7	5.9	6.1	6.2

The increase in unemployment since the beginning of the year was higher for men in comparison to women. Specifically, the unemployment rate increased by 2.6% for men during the period January – November 2009 compared to 1.7% for women.

⁶ According to DG ECFIN Autumn Forecasts.

Men

Month	12/2008	1/2009	2/2009	3/2009	4/2009	5/2009	10/2009	11/2009
Unemployment rate	3.6	3.6	3.9	4.3	4.8	5.0	6.0	6.2

Women

Month	12/2008	1/2009	2/2009	3/2009	4/2009	5/2009	10/2009	11/2009
Unemployment rate	4.5	4.6	4.8	5.0	5.2	5.4	6.1	6.3

The crisis seems to have influenced younger age groups to a greater extent. As can be seen in the tables below, the unemployment rate among the 15-24 year-old age group increased by almost 4% during the period January –September 2009 compared to only 1.7% for the 25-74 year-old age group.

Unemployment Rate According to Age

15-24 year-old age group

Month	12/2008	1/2009	2/2009	3/2009	4/2009	5/2009	8/2009	9/2009
Unemployment rate	9.3	10.8	10.8	10.8	12.8	12.8	14.7	14.7

The average rate of unemployment for young people in the Euro area between the ages of 15-24 was 20.3% in September 2009.

25-74 year-old age group

Month	12/2008	1/2009	2/2009	3/2009	4/2009	5/2009	9/2009	10/2009	11/2009
Unemployment rate	3.3	3.4	3.6	3.9	4.2	4.4	4.9	5.0	5.1

The corresponding average rate in the Euro area for November 2009 was 8.7%.

1.2.2 THE IMPACT OF THE CRISIS IS MORE PRONOUNCED IN SPECIFIC SECTORS

Five sectors of economic activity seem to have been stricken to a greater extent by the international recession (construction, trade, real estate and manufacturing, hotels /restaurants). However, the effects of the crisis seem to be particularly pronounced in the construction industry, where there has been an increase in the number of unemployed of almost 2000 persons from December 2008 to December 2009.

Unemployment according to economic activity (actual data)

	December 2008	March 2009	April 2009	May 2009	June 2009	July 2009	October 2009	November	December 2009
Manufacturing	1230	1.553	1.572	1.586	1.630	1.613	1.767	1.886	1.783
Construction	1272	2.376	2.506	2.574	2.579	2.636	2.945	3.157	3.136
Wholesale and retail trade	2232	2.812	2.819	2.809	2.964	3.069	3.259	3..575	3.248
Real Estate	937	1.189	1.180	1.124	1.238	1.256	1.430	1.671	1.576
Hotel and Restaurants	3.109	3.335	2.480	1.725	1.574	1.576	1.818	3.776	4.065

Source of figures: Statistical Service of Cyprus

The Case of the Construction Sector

The boom in construction activity during the last decade has had major effects on the growth rate of the Cypriot economy. This sector has not only been increasing employment steadily (and through it available incomes and the GDP), but has also had important intersectoral relationships with the domestic system of production⁷. As illustrated by the table below, there was a significant increase in employment in the construction sector of up to 9.450 employment positions (that is, 35% approximately) during the period 1998-2007.

Construction and Housing Statistics (2007): Statistical Service of the Republic of Cyprus

Year	Number of employed
1992	26.019
1993	25.549
1994	25.428
1995	27.749
1996	27.441
1997	26.849
1998	26.165
1999	26.174
2000	26.160
2001	26.600
2002	27.314
2003	29.518
2004	31.140
2005	33.609
2006	34.058
2007	35.590

⁷ Cyprus Labour Institute, *Economy and Employment Report 2008*.

Various indicators appear to confirm a slowdown in construction activity (fewer building licenses, a decline in the confidence index for the construction sector, etc.). According to the Statistical Service of Cyprus 3,697 building licenses were issued from January to May 2009, registering an increase of 5.0% compared to the corresponding period of the previous year. The total value of these building licences decreased by 1.1% and the total building area decreased by 9.5%. The number of dwelling units recorded a decrease of 10.1%. This development appears to have brought about a substantial increase in layoffs, mainly in small contracting companies. To give some indication of this, the number of unemployed in the sector increased from 870 in October 2008 to 2.945 in October 2009.

1.2.3 THE PUBLIC DISCOURSE ON RESTRUCTURING

As mentioned earlier, the consequences of the international economic crisis in Cyprus have not accelerated the appearance of restructuring or collective redundancies. All the public, employer and labour organisations which were interviewed in the context of the present review in Cyprus seemed to share the view that the consequences of the crisis, in relation to other countries, had been painless up until September⁸. Summarily, various reasons seem to contribute this particular view:

- **Firstly**, unemployment (generally in the construction sector, although also in tourism) seemed, at first, to have been mainly affecting foreign workers (either permanent or seasonal) in Cyprus, due to shortages in the supply of labour. Therefore, there had been no great concerns over the sacking of domestic workers. It is worth mentioning that two of the Ministry of Labour's most important initial measures for dealing with the crisis and unemployment concern policies regarding the employment of non-domestic workers. Specifically, the Ministry is pushing for an evaluation and reassessment of the Foreign Workers Employment Strategy, aiming for each relevant sector of economic activity to cover its needs in human labour with indigenous workers. A second measure that is part of the policy on the employment of foreign workers has to do with stepping up the campaign to combat undeclared employment of non-EU citizens in Cyprus.
- **Secondly**, according to members of labour organisations in the field, the most visible sign of the crisis in the construction market was the drastic reduction in overtime, which in the past would reach up to 5 hours daily, due to the rapid growth of the Cypriot construction industry in recent years. In other words, instead of layoffs, the crisis led to a reduction in work hours, which fell back to «normal levels».
- **Thirdly**, the relatively more positive forecasts on the Cypriot economy in comparison to other European countries, together with the quality of social dialogue in Cyprus were sustaining a climate of restrained optimism concerning the ability to contain the consequences of the crisis on the labour market and the Cypriot economy in general.

⁸ These interviews were held during the month of July 2008.

1.3 Restructuring Frameworks

1.3.1 LEGAL FRAMEWORK AND SPECIAL FUNDS FOR REDUNDANT WORKERS

Grounds for Collective Dismissals

Legislation refers to collective dismissals for reasons not related to the individual workers concerned (breach of workplace rules, etc). Redundancies due to economic or technical reasons fall within the scope of the Collective Redundancies Law of 2001. Cases of voluntary termination of employment or termination of employment as a result of the expiry of a fixed-term contract are not considered redundancies.

Definition of Collective Dismissals

Minimum Size of Company Covered

The law does not apply to companies that employ twenty persons or less.

Minimum Redundancies Required

To fall within the scope of legislation, employers must plan to dismiss or make ten or more employees redundant within 30 days.

Variation with Enterprise Size

Employers must plan to make ten employees redundant in a total workforce of between 21 to 99 persons, 10% of the workforce redundant if there are between 100 to 299 workers employed, and 30 employees redundant if there are 300 or more people employed.

Groups Excluded

Civil servants, workers employed by semi-private organisations, local authorities, legal entities covered by public law, seamen and workers on fixed-term contracts are excluded from the legislation.

Consultations with Employees

In Cyprus, formal or informal consultation on planned restructuring is the result of the employer's obligation to inform and consult employees, under the provisions of different pieces of legislation. The most relevant legal framework refers to the following laws:

- *The Collective Dismissals Law* No. 28(1) was adopted in 2001 in order to bring Cypriot legislation in line with the Collective Dismissals Directive 98/59/EC.

- *The Termination of Employment Law, 1967 (TEL), amended in 2001.*
- *The Industrial Relations Code (IRC) was negotiated and signed by the Government, employers and trade unions in 1977. It is a purely voluntary agreement, and any adherence to it is dependent on the goodwill of the parties. Nevertheless, at least its procedural part is of considerable importance in practice.*
- *Laws 104(I)/2000 and 39(I)/2003, laws on the safeguarding and protecting the employee's rights in the event of the transfer of undertakings, businesses or parts thereof.*
- *Law 78(I)/2005, a law on the adoption of a general framework to inform and consult the employees.*

Parties to Consult

Employers must consult with trade unions or employee representatives. This obligation is specified by the Collective Redundancies Law of 2001 and the Industrial Relation Code.

Minimum Period of Consultation

Workforce

The Collective Redundancies Law of 2001 does not specify a period of advanced notice concerning the workforce. Provision for information is made in the Industrial Relations Code. According to the IRC, employers should notify the trade unions of their intention to proceed to dismissals at least two months before the date of the redundancy.

Public Authorities

Legislation states that employers notify public authorities 'the soonest possible' on the following issues: a) reasons for the redundancies planned; b) number of employees to be made redundant (and, where possible, their occupation, names and responsibilities); c) number of persons normally employed; d) the period over which the redundancies will be effected. According to the legislation, the employer must forward a copy of the above notification to the employee's representatives.

Employees to be Made Redundant

The Termination of Employment Law of 1967 stipulates the minimum periods of notice to be given by employers depending on the length of service: one week's notice for 26 to 51 weeks of service; two weeks' notice for 52 to 103 weeks of service; four weeks' notice for 104 to 155 weeks of service; five weeks' notice for 156 to 207 weeks of service; six weeks' notice for 208 to 259 weeks of service; seven weeks' notice for 260 to 311 weeks of service; eight weeks' notice for more than 312 weeks of service.

Specific Issues to be Covered

Legislation specifies that at a minimum employers consult on: a) avoiding collective dismissals or reducing the number of employees to be affected; and b) moderating the impact through social measures, such as the re-training of affected employees and their reintegration into the labour market.

Information to be Provided by Employer

According to the Collective Redundancies Law of 2001, the employer should supply the following information to the employee's representatives: a) the reasons for the planned redundancies; b) the number and categories of employees to be made redundant; c) the number and categories of employees normally employed; d) the period over which the redundancies are to take place; e) the criteria for the selection of the employees to be made redundant.

Compliance Arrangements

Legislation specifies various low-level fines on employers for failing to comply with legislation. According to the Collective Redundancies Law, any employer violating any provision of the Law in respect to information, consultation and notification is subject to a monetary penalty that may not exceed the amount of 1,708 euros. In the case that the collective redundancies are effected before the authorised period (collective redundancies take effect no earlier than 30 days from the date of the notification to the Ministry of Labour and Social Insurance), the employer is subject to a fine of up to 3,414 euros. Employees or others can take up legal action in court against employers who do not comply with legislation.

Redundancy Compensation

The employee's entitlement to compensation in accordance with the Termination of Employment Law remains unaffected by the provisions of the Collective Redundancies Law. Employees which have been working for the same employer for more than 104 weeks are entitled to payments from the Redundancy Fund. The amount of compensation depends on the duration of employment. Higher compensation can be (and often is) awarded under agreement between employer and employees.

The Industrial Relations Code

The Industrial Relations Code was the main provision for restructuring prior to the adoption of the EU Directive. According to the Code, "it is desirable that collective agreements should contain provisions on the issues of dismissals".

Protection of Employees in Case of Bankruptcy

The legislation for the Protection of Employees Rights in Case of Employer Insolvency covers workers against bankruptcies. In particular, all outstanding payments by employers to employees are safeguarded thanks to a special fund established for this particular purpose. The fund is financed exclusively by employer contributions with 16.6% of the contributions being transferred into the Redundancy Fund. More specifically, entitlement to payments from the Fund for the Protection of Employees Rights in Case of Employer Insolvency.

The employee is entitled to the following payments from the Fund:

- All unclaimed wages due from his/her employer for the last thirteen weeks of employment, occurring within a period of the last twenty-six weeks up until the date the employer's insolvency commenced,
- The equivalent of all unclaimed paid leave for the above thirteen weeks (in the event the employer possesses a certificate of exemption from payment of contributions to the Central Holidays Fund) and
- The equivalent of the thirteenth and fourteenth salary, or the wages of the 53rd until the 56th week for the same period.

1.3.2 PARTIES INVOLVED IN RESTRUCTURING

The participation of parties in procedures for managing the effects of a restructuring fall into three areas:

- Consultation.
- Worker support.
- The creation of employment opportunities in areas struck by restructuring.
- Wider initiatives and proposals for the prevention of restructuring.

Parties Involved in Consultation Procedures

In Cyprus, formal or informal consultation on planned restructuring is the result of the employer's obligation to inform and consult employees, essentially under the provisions of the *Law on Collective Dismissals 28(I)/2001*.

Consultations develop chiefly between trade unions and employers. The Ministry of Labour and Social Benefits is involved in the consultations in two ways. Firstly, legislation states that employers must notify public authorities as soon as possible on the following issues: a) the reasons for the redundancies planned; b) the number of employees to be made redundant (and wherever possible, their occupation, names and responsibilities); c) the number of persons normally employed; and d) the period over which the redundancies will take place. Secondly, the Department of Labour Relations is responsible for mediating in labour disputes in case there is no settlement arrived at by workers and their employer. Based on experience up until now, no other official bodies, such as public employment services, regional or local authorities, or labour consultants for example, take part in the proceedings.

Parties Providing Support for Workers

Specific Public Services for Restructuring Issues

Due to the limited size, incidence and spatial concentration of restructuring in Cyprus as well as the situation of almost full employment prevalent in the Cyprus Labour Market during the past

decade, there are no specific structures in place for the support of workers who lose their jobs as a result of restructuring, either in the form of supportive measures to find alternative employment, or to adjust their redundancy. In other words, workers who loose their job because of restructuring fall under the same schemes as people loosing their job on an individual basis (Public Employment Service).

Trade Unions

Trade unions do actively support employees loosing their jobs. For example, the Cyprus Workers' Confederation (SEK) and the Pancyprian Federation of Labour (PEO) maintain several job-seeking offices. As in the case of the Public Employment Service, these job-seeking offices do not exclusively aim at aiding workers who have been victims of mass layoffs.

Employers / Businesses

Only in some instances do employers provide support to workers in order to find new jobs. A rather recent and characteristic example is that of British American Tobacco. Upon its decision to terminate its production line in Cyprus, the company has provided free individual and training services to redundant workers, as well as job interviews with other employers.

Parties Involved in Measures for Attracting New Employment

Measures aimed at expanding employment opportunities or attracting new jobs at regional or local level are very rare, chiefly due to the limited size, incidence and spatial concentration of restructuring in Cyprus. It is worth remembering that during the past decade the Cyprus Labour Market had been characterised by conditions of almost full employment (high employment and job creation, low unemployment, labour supply shortages).

Parties Involved in Anticipating Restructuring

Different parties occasionally take initiatives with the aim of preventing restructuring. The loans guaranteed by government and granted to two semi-private Cypriot businesses facing serious economic difficulties (Cyprus Airways, Kofinou Slaughterhouse) contributed in a decisive way to saving hundreds of jobs. The Human Resource Authority's new recruitment programmes aim at preventing layoffs in the middle of the international economic crisis. With the reliability of the Cypriot system of social dialogue to back them, trade unions as well as employer organisations and companies are working together to find solutions in order to avoid mass layoffs in Cyprus.

Parties' Degree of Involvement in the Various Activities of the Restructuring Process

	Businesses	Trade Unions	Public Authorities
Consultation	++++	+ +++	++
Worker Support	++	++	++
Attracting new employment	-	-	+
Anticipating restructuring	+	+	++

2.1 Measures and Tools for Anticipating Restructuring

2.1.1 RECENT INITIATIVES AND PROPOSALS FOR DEALING WITH THE CRISIS AND RESTRUCTURING

New Initiatives of the Ministry of Labour for Anticipating Restructuring

At first, policies aimed at countering the effects of the crisis on employment in Cyprus fell into four basic initiatives⁹:

- Intensified efforts by the Public Employment Services to find job placements for the unemployed.
- Evaluation and reassessment of employment policies regarding non-EU citizens.
- Intensified campaigning to combat undeclared employment.
- Plans for the further education and training of the unemployed.

In the context of this final initiative, the Human Resource Development Authority, under the Ministry of Labour and Social Insurance, has drafted a *Special Action Plan*, with the aim of warding off unemployment.

The *Single-enterprise Initial and Continuous Vocational Training Programme* (one of the four programmes in the aforementioned plan), is meant for businesses in Cyprus, regardless of their field of economic activity. This specific plan, among other things, seeks to preserve jobs in businesses that are facing economic difficulties due to the crisis, by covering a substantial part of the expenses for the training of their staff.

It should also be pointed out that at the present stage, the Labour Department of the Ministry of Labour and Social Insurance is displaying an increased alertness in preventing job losses. Specifically, according to senior staff at the Ministry, whenever cases that may lead to employee dismissals are detected, the department immediately provides the enterprise's owners with information on available options to save employment positions, such as offering their employees the chance to join the aforementioned training programme (i.e. Single-enterprise Vocational Training).

Following this first package of measures, the Ministry of Labour and Social Insurance proposed two new plans aiming at addressing the rise of unemployment which has been observed during the last four months:

- The “Emergency Plan for the Hiring of Unemployed” is aiming at providing support to businesses hiring unemployed persons. The budget for this project is EUR 6 million and provides financial assistance amounting to 30% of wages.
- The second plan, which is under configuration, aims at providing support to enterprises facing financial difficulties in order to avoid redundancies.

⁹ It should be noted that there have been no changes regarding the terms of entitlement to benefits or to their extent and duration.

Employer Organisation’s Proposals for Avoiding Redundancies

The Cyprus Employers and Industrialists Federation (OEB) presented a set of proposals on 18 May 2009 aimed at supporting employment for the duration of the crisis, in the event that the rate of unemployment exceeds 5.5%. The proposals focus on bringing labour unions to committing themselves not to claim any pay rises for the next two years and on businesses not to increase prices on their goods and services.

Moreover, OEB suggested using the reserves of the Redundancy Fund to cover employer contributions, on condition that jobless individuals are hired within the first two or three months since the day they became unemployed.

It is worth noting that both this fund and the Redundancy Fund have accumulated large sums, given that compensatory payments due to redundancies or bankruptcy cases have been relatively limited in Cyprus. The Cyprus Chamber of Commerce and Industry (CCCI) as well as the Cyprus Employers and Industrialists Federation (OEB) have proposed taking advantage of the reserves of both funds in order to face the crisis. According to estimates, the reserves of both funds amount to approximately 300 million euro (the reserves of the Redundancy Fund were 202.3 million on 31.12.2007). Moreover, the reserves of the Insolvency Fund are estimated at approximately 100 million euro, an important sum by Cypriot standards.

Trade union proposals

Both the Pancyprian Federation of Labour (PEO) and the Cyprus Worker’s Confederation (SEK) have submitted several proposals for tackling the impact of the recession on the economy and the labour market

PEO’s proposals for the labour market

The Pancyprian Federation of Labour has presented a number of proposals to limit the increase of unemployment:

- Provision of financial support to businesses which hire unemployed people.
- The subsidy of wages in the tourist industry in order to expand their activities throughout the year and address the problem of seasonality.
- The funding of training programs for workers who would otherwise be laid off by companies facing serious problems.
- The grant of incentive programs to promote self-employment.
- Subsidising jobs in enterprises to recruit young scientists.
- Subsidising the wage of employees in the tourist industry in order address the problem of seasonality.
- The study and adoption of legislative or other measures to prevent redundancies on the basis of proposals for modernising the Law on Termination of Employment.
- The promotion of social support for unemployed people and especially those who remain unemployed more than 6 months.

- Provision of incentives for the labour inclusion of long-term unemployed aged over 50, through special programs in social services, the public sector or municipalities.
- Further upgrading of the Public Employment Service (PES) with an emphasis on personalized approach.
- Measures to combat illegal and undeclared employment.

SEK's proposals for minimising the impact of the crisis

The Cyprus Workers 'Confederation has also submitted proposals to minimise the impact of the crisis on the economy and jobs.

- Speed up policies to increase productivity.
- A comprehensive policy to combat fiscal fraud.
- Increased government revenue through the securitization of real estate.
- Rational management of public resources.
- Acceleration of development projects in order to minimise unemployment and its social and economic costs.

2.1.2 MEASURES AND TOOLS USED IN THE PAST TO PREVENT RESTRUCTURING

State Guarantees for Loans Granted to Businesses in Trouble

In recent years, there have been two restructuring cases in which the government guaranteed a loan so that the companies concerned could meet their short-term financial obligations and maintain jobs. The two companies, Cyprus Airways and the Central Slaughterhouse of Kofinou (both companies belonging to the semi-government sector of Cyprus) faced serious financial problems after Cyprus' entry into the European Union¹⁰.

Other Measures and Prevention Tools Used in Recent Cases of Restructuring

After examining the experiences of the last few years, two more cases stand out where measures were taken to prevent mass layoffs and restructuring:

- A reduction in working hours in the industrial sector (due to reduced demand from export markets).
- The utilisation of the labour relation system to prevent mass layoffs (Arab Bank, Cyprus Airways).

Due to their exceptional nature, these measures will be examined in more detail in the third chapter of this report.

¹⁰ The cases concerning these two businesses are examined in more detail in Chapter 3.

Managing Seasonal Work in the Tourist Sector

Due to the seasonal nature of tourism, legal measures exist in the tourist sector that provide partial unemployment benefits to employees who have been given temporary leave. This measure, known as ‘suspended employment’, is based on an agreement between the Ministry of Labour and Social Insurance, the employers’ organisations and the unions. It aims at preserving the bond between employers and employees over the winter (from 1 November until 31 March). The ‘suspended employment’ measure has been in use for at least 25 years in the tourist industry. According to the Union of Hotel and Recreational Establishment Employees of Cyprus (SYXKA-PEO) –affiliated to the Pancyprian Federation of Labour (PEO)– changes to the current system are being considered in order to provide incentives to employers in the tourist sector to keep on seasonal employees.

Recent measures to promote training

The recent “Emergency Plan for the Training of Unemployed in Business”, which is based on a partnership of the Department of Labour of the Ministry of Labour and Social Insurance, the Human Resources Development Authority, the Cyprus Productivity Centre and the Higher Hotel Institute of Cyprus (HHIC) aims at including unemployed in “in-house” training programs (including the unemployed in the tourist industry during the winter months). This project is one of the five plans of the *Special Action Plan* implemented by the Human Resource Development Authority with the aim of warding off unemployment.

2.1.3 MEASURES AND STRATEGIES AIMED AT COPING WITH SKILLS GAPS, EDUCATIONAL AND VOCATIONAL TRAINING AND DEVELOPMENT OF HUMAN RESOURCES

The table below presents some of the most important measures related to improving workforce performance in Cypriot businesses.

Measures for the Development of Human Resources

Measure	Implementing authority	Description
Transition from low productivity to high productivity work positions	Cyprus Productivity Center	Provided for the enterprise training scheme to replace low productivity work positions with high productivity work positions
Incentives plan for implementing mechanisms of lifelong learning and improvement	Cyprus Productivity Center	Support for businesses to adopt mechanisms of lifelong learning and improvement as well as aid in the diffusion of accumulated knowledge and experiences.
Single-enterprise Continuous Vocational Training	Human Resources Development Authority	The programmes are directed to employers (businesses/organisations) active in all sectors of the economy and interested in training for their staff. They are also available to businesses facing difficulties in keeping their employees fully employed and occupied

It should be underlined that the Cypriot economy is presenting a serious deficit in production. Indicatively, between 2002 and 2007 the annual growth rate in work productivity was just 0.3% compared to an average rate of 1.4% in the ÅU-27. In 2007, the level of work productivity in Cyprus (GNP per employee) was 78% of the average rate in the ÅU-15¹¹. This sluggish increase in productivity not only inhibits actual convergence with ÅU-15 average rates of development but at the same time threatens the future levels of competitiveness of Cypriot enterprises. Seen from this perspective –and as long as the experiences of restructuring in the clothing sector during the 1990s is taken into account– supporting productivity will most likely play a decisive role in the prevention of any mass layoffs in the future.

2.2 Measures and Tools for Managing Restructuring

2.2.1 MEASURES FOR MANAGING RESTRUCTURING IN CYPRUS

A relatively wide variety of ways to manage mass layoffs comes to the surface after examining restructurings taking place in Cyprus over the past few years. Specifically, the following cases are noteworthy:

- Business measures for training employees and promoting them to new employment positions (BAT).
- Guaranteed loans to semi-private sector businesses experiencing difficulties (Cyprus Airways, Kofinou Slaughterhouse).
- Use of social dialogue to find satisfactory solutions for workers (Cyprus Airways / Swissport).
- Agreement on measures for early retirement (Ports of Limassol and Larnaka).
- Operation of employment offices by labour organisations (PEO).
- Utilisation of social dialogue for the payment of higher compensations than those provided for by the law, with either collective agreements foreseeing this option (construction sector) or not (industrial sector, tourist industry, BAT).

It should also be noted that both the **Redundancy Fund** and the **Fund for the Protection of Employees Rights in Case of Employer Insolvency** are two permanent mechanisms with a significant role in managing the impact of restructuring.

¹¹ Cyprus Labour Institute, *Economy and Employment Report 2008*.

2.2.2 PROPOSALS BY EMPLOYER ORGANISATIONS FOR MANAGING REDUNDANCIES

In addition to the proposals aimed at anticipating restructuring, the Cyprus Employers and Industrialists Federation (İİÅ) have also suggested meeting three targets to help reduce unemployment:

- Using the reserves of the Redundancy Fund to cover employer contributions, on condition that jobless individuals are hired within the first two or three months since the day they became unemployed.
- Distributing benefit payments to unemployed individuals joining the Human Resource Development Authority's vocational training programme. The benefit will be equivalent to 75% of their previous earnings.
- Announcing the establishment of a state prize for corporate social responsibility based on the hiring of unemployed individuals.

2.2.3 TERRITORIAL STRATEGIES AND PLANNING FOR ECONOMIC DEVELOPMENT AND REVITALIZATION

Due to the limited size, incidence and spatial concentration of restructuring in Cyprus as well as the situation of almost full employment prevalent in the Cypriot labour market during the past decade, measures aimed at expanding employment opportunities or attracting new jobs at a regional or local level are quite limited. Job creation schemes in regional development strategies are primarily aimed at rural areas. Efforts by public authorities aim to foster job creation mainly through enhancing the competitiveness of local enterprises and improving the attractiveness of rural areas. In the Strategic Development Plan 2007-2013 of the Planning Bureau of the Republic of Cyprus, the following measures aimed at promoting rural areas as business locations are mentioned¹²:

- Creating new economic activities and employment opportunities for the entire population.
- Further promoting tourism in rural areas.
- Creating a business infrastructure.

2.2.4 THE CYPRIOT SYSTEM OF BIPARTITE SOCIAL DIALOGUE: A FUNDAMENTAL RESOURCE FOR MANAGING RESTRUCTURING

The Efficiency of the Cypriot System of Social Dialogue

After examining cases of restructuring in recent years, it is clear that *bipartite social dialogue* is an extremely valuable resource for the management of restructuring in Cyprus. This conclusion is based on two points:

¹² However, it should be noted that these initiatives are barely linked with restructuring issues.

- Firstly, most negotiations were carried out in an amicable environment without any labour disputes
- Secondly, workers received larger sums of compensation than was anticipated by law in all restructuring cases.

The extreme importance of social dialogue in Cyprus can be seen not only as a means of securing long-term industrial peace, but also as a common way to approach a broad spectrum of issues related to economic and social policy, is a well-documented fact¹³. As Soumeli (2006) points out, “according to both employers’ organisations and trade unions, the experience gained from participating in the various Tripartite Bodies, the Economic Advisory Committee and the Industrial Advisory Board in particular, has been extremely positive because there is a real possibility of dialogue with a view to achieving consensus, whereas as a rule, government’s commitment is achieved through unanimous decisions”. Overall, the smooth functioning of social dialogue in Cyprus owes much to the following factors (Constantinou, 2005):

1. The will for dialogue by the social partners or the parties involved.
2. Strong, representative and independent worker and employer organisation, governed internally by discipline and democracy.
3. Knowledge of the subject under discussion, adequate for effective participation in decision-making, as well as a positive attitude to consult and cooperate.
4. Climate of mutual trust, respect and understanding amongst the social partners or the parties involved.

The Importance of Social Dialogue for Managing Cases of Restructuring

The unique characteristics of the collective bargaining system in reaching collective agreements becomes very important when focussing on the contribution of social dialogue to the management of restructuring, for three main reasons:

- Firstly, because of the decentralised structure of collective bargaining in Cyprus, many of the Collective Labour Agreements are concluded at enterprise level. According to Soumeli (2006), more than 450 enterprise collective agreements were in force in 2006 (mainly in the manufacturing, wholesale and the tertiary sector).
- Secondly, all issues arising from collective agreements at enterprise level are resolved at the direct negotiation stage since employers do not wish to enter in lengthy procedures.
- Thirdly and most importantly, as pointed out once more by Soumeli (2006), negotiations in private enterprises are more easily concluded as trade union and employers’ organisations maintain closer and more harmonious relations.

As is the case with collective agreements, all the above factors seem to have contributed substantially –based on experiences up until now– to the negotiations in cases of restructuring being conducted smoothly.

¹³ For example, see: Soumeli, E. (2006), *Capacity building for social dialogue in Cyprus*, European Foundation for the Improvement of Living and Working Conditions.

3.1 Active Measures

3.1.1

Reduction in Work Hours Due to Reduction in Export Market Demand (*Muskita and Alco*)

Following a proposal by the management, part of the 250 workers at the manufacturing branch of the Muskita Aluminium Industries worked 2 to 3 weeks less in total, over a period of six months (until August). The decision was taken due to decreased demand in the United Kingdom, which is the company's primary export destination.

Similarly, workers at the Alco automobile filter industry worked four days a week from March until 31 June 2009. The decision was taken, as in the case of Muskita, because of decreased demand from the United Kingdom. Trade unions accepted the decision based on two reasons. Firstly, the workforce at the specific plant is made up of highly-skilled female employees, a fact that makes it particularly difficult to place them in corresponding work positions in other factories in Cyprus. Secondly, at the request of labour representatives, the management has accepted to continue paying the workers' social contributions (social insurance and benefits fund) based on the usual five-day working week.

In both of these examples in the industrial sector, workers have been subjected to a reduction in salary but not in social benefits. The reduction has been proportional to the reduction in the hours of work. Based on the examples we have up till now, these reductions, due to their relatively small scale and duration, do not cause any significant changes in the total income of employees.

In both of the aforementioned industrial plants, the agreement on the reduction of work-hours was not incorporated into each company's collective agreement due to the temporary nature of the specific measure. There was however, a written and clearly defined agreement reached at by both sides. It is worth mentioning that when this measure was competed, the normal working time applied again for all workers.

3.1.2

Utilisation of Social Dialogue to Prevent Mass Layoffs (*Arab Bank*)

In a letter addressed to the Minister of Labour and Social Insurance in September 2005, Arab Bank announced the termination of its business activities in Cyprus. Specifically, Arab Bank announced that it would cease operations in Cyprus and dismiss its 176 employees. The letter from Arab Bank officially rejected the Ministry of Labour's mediation proposal submitted on 2 September 2005 with regard to efforts to resolve a labour dispute between the Bank and the Cyprus Union of Bank Employees (ETYK).

It should be noted that this labour dispute arose in the context of the restructuring process begun by the Bank in December 2004, which was aimed at reducing labour costs. According to its former Country Manager, wages made up 75% the total operating costs of Arab Bank, which has been operating in Cyprus since 1984. In order to remain competitive and retain part of its business in Cyprus, the bank decided to cut back on labour-intensive services, by dismissing a total of 68 employees.

A dispute between the bank and ETYK followed, mainly involved with the amount of severance pay due to the employees. The direct intervention of the Cyprus Central Bank contributed decisively to the continuation of the negotiations, which had reached an impasse. After almost two months of difficult negotiations, Arab Bank and the Cyprus Union of Bank Employees (ETYK) managed to reach an agreement. Arab Bank recalled its decision to cease operations in Cyprus and dismiss its 176 employees. According to the content of the new agreement, the bank decided to reduce dismissals from a total of 68 employees down to 60 employees.

As far as severance pay was concerned (actually the main cause of dispute between the bank and ETYK), the bank agreed to pay compensation in the range of CYP 2.5 million, representing 8-week pay for each year of service of the 60 dismissed employees, over and above the compensation from the Redundancy Fund and based on the procedures provided for collective dismissals.

The bank also accepted the term for a minimum compensation sum of CYP 15.000. Although the content of the new agreement differed from ETYK's initial demands, failure to achieve agreement would have had extremely negative results on employment.

As part of its expansion in the Cypriot market, Piraeus Bank has recently acquired Arab Bank (winter of 2007). The acquisition marks Piraeus Bank's integration into a growing business in Cyprus, and at the same time puts an end to the climate of uncertainty caused by fears that Arab Bank would, one day or another, cease doing business altogether in Cyprus.

3.1.3

Utilisation of Mediating Bodies for Reaching Mutually Acceptable Solutions for Both Company and Employee (*Cyprus Airways' Ground Handling Services*)

In September 2007, the management of the national airline, Cyprus Airways, decided to assign its Ground Handling Services to a joint venture with Swiss company Swissport (Cyprus Airways maintain a 25% share in the joint venture). The decision (part of a wider range of measures in restructuring the company) was taken without any prior consultation with employee representatives. It was met with the outright opposition of labour unions, which deemed that the decision was a unilateral breach of earlier agreements settled upon in context with the company's restructuring scheme. These agreements had specifically ruled out transferring any services to the private sector or any further reductions in the number of employees. Two trade unions, SYNIKA - SEK and SIDIKEK - PEO, declared the status of Cyprus Airways staff (specifically the 140 in the departments being affected) as non-negotiable, at the same time announcing a series of strike actions. In April 2008, Cyprus Airways and labour union executives signed an agreement after a mediatory proposal was put forward by the Labour Relations

Department of the Ministry of Labour and Social Benefits. According to the agreement, the 140 employees were given the opportunity of choosing one of three options:

- To leave employment voluntarily and receive increased severance pay. A total of 41 employees took this option (the estimated amount of severance pay for all the employees was EUR 4 million).
- To work for Swissport under the same terms and conditions of employment while maintaining the right to leave until the 1st of November 2008.
- To temporarily work for Swissport and reserve the right to return to Cyprus Airways after a period of three years.

In total, compensations are to be given to all of the employees that are affected by the joint venture, regardless of their choice. According to trade union officials, the deal was the best possible, as it satisfied the basic demand of the workers, namely having the largest possible number of choices. It should be noted that this particular agreement, which was based on the proposals of the Ministry of Labour's mediating service, could not have been achieved without the Ministry of Finance's significant contribution in taking on the financing of payments due to workers deciding to leave the company. The Ministry's decision to lend a hand rested on the fact that due to Cyprus' great dependence on tourism, everything should be done to avoid strike actions from occurring in any one of the country's airports.

3.1.4

Government Guarantees on Loans Granted to Businesses Facing Problems (*Central Slaughterhouse in Kofinou*)

The Central Slaughterhouse in Kofinou, the biggest in Cyprus, is facing a range of severe financial problems, following its inability to pay off a debt estimated at around EUR16 million. A substantial part of this debt initially arose from borrowing with a view to modernising the slaughterhouse's premises. This investment was deemed to be necessary in order for the organisation to comply with the operating specifications set by the European Union. It was calculated that thanks to internationalisation and expansion of the slaughterhouse's business, the debt would eventually be paid off.

However, the liberalisation of the market, which permitted the operation of private slaughterhouses, has brought serious competitive pressures to bear against this semi-private organisation. Management and workers of the municipal slaughterhouse have accused private enterprises of having serious competitive advantage over them, since they employ foreign workers who do not come under the provisions of the collective agreement. It is estimated that this fact, which translates into a loss of competitiveness, has played a decisive role in the overall worsening of the slaughterhouse's financial situation and its inability to pay back its initial debt. These developments have raised serious concerns over the future of all 120 slaughterhouse workers. The fact that management was unable to pay workers their wages for the month of December 2008 is indicative of the situation. Government, management and workers are examining various solutions, with a view to boosting the competitiveness of the enterprise, adapting it to the conditions of strong competition now prevalent in the market, and safeguarding the 120 jobs. It is worth noting that no question of privatising the slaughterhouse has been raised, according to the participants in these talks. The Ministry of Interior has drawn up a rescue plan for the Slaughterhouse of Kofinou. The plan seeks to provide government

guarantees on a loan of EUR 1.6 million so that the slaughterhouse meets its current financial obligations. In addition, the Ministry of Interior has assigned to consultants the development of a restructuring plan aimed at transforming the slaughterhouse into a financially viable business. This plan has been submitted for approval to the European Commission.

3.1.5

Employment Offices Operated by Labour Unions (*Pancyprian Federation of Labour & Cyprus Workers' Confederation*)

Over the years, Labour Unions have taken significant initiatives in order to combat unemployment and collective redundancies. Indicatively, the Pancyprian Federation of Labour (PEO) and the Cyprus Workers' Confederation (SEK) maintain job-seeking offices. Indicatively, PEO's office managed in 2008 to find jobs for about 30 unemployed individuals per month (on average). Trade unionists report on workplace vacancies they record to the office. The office then undertakes sending 5-6 candidates for interviews with the employer. SEK's district job-seeking offices function in a similar approximately way. Also noteworthy is the initiative taken by the Cyprus Building, Wood, Mine and General Workers Trade Union (affiliated to PEO) for the reduction of unemployment. The union maintains an employment office which deals with finding jobs for the unemployed. The office's activities are based on the daily contacts between unionists and employers. Due to the crisis, the office's services have been recently upgraded. It is worth remembering that worker's unions played a defining role in finding employment positions for workers who had lost their jobs during the 1990s due to the mass layoffs that had taken place at the time in the clothing and footwear industries. A third job-seeking office run by a labour union is also in operation at the PEO: that of the Civil Servants, which is geared at hiring construction workers for public works.

3.2 Passive Measures

3.2.1

Negotiation and Implementation of Early Retirement Measures (*Ports of Limassol and Larnaka*)

On June 2008, the Port Councils of Limassol and Larnaka announced the implementation of a voluntary early retirement plan that could result in the loss of 133 jobs for dockworkers. The decision aims at reducing operating costs and increasing the ports' competitiveness by hiring 155 younger dockworkers. The new dockworkers will earn approximately 60% less than their older fellow workers. The annual earnings of the newly-hired workers are estimated to range between EUR 34,000 and 40,000 (compared to approximately EUR 100,000 for current dockworkers). The cost of the older dockworkers' compensation will be borne by the Cyprus Shipping Association and has been estimated at around EUR 43,000 per year for each worker; it

will be paid out annually up to the year of retirement. The average age of workers taking up voluntary retirement is 61. The bill, which is the result of long-lasting negotiations between trade unions, maritime agencies and the Ministry of Communications and Works, has been approved by the House of Representatives (the Parliament of Cyprus). The bill defines how funds will be raised and used in order to finance the voluntary retirement scheme.

3.2.2

Combining Anticipating and Managing Measures in Major Restructuring Plans (*Cyprus Airways*)

The restructuring of Cyprus Airways was accompanied by the largest case of collective redundancies to have ever occurred in the Republic of Cyprus during the last decade. This specific case was special because it combined measures which both anticipated as well as managed the restructuring. **Because of this, the Cyprus Airways case calls for greater examination in comparison to other cases of restructuring.**

The Most Important Restructuring Cases of the Last Decade

The Cypriot state owns 69.62% of the share capital of Cyprus Airways. The company is listed on the Cyprus Stock Exchange. The company was restructured after it developed severe financial problems that became evident following the liberalisation of air transport, the abolition of state aid and the loss of revenues from Duty Free shops.

Indicatively, Cyprus Airways suffered losses of around EUR45 and EUR25 million in 2004 and 2005 respectively. As a result of the restructuring of Cyprus Airways, to date, around 573 workers have become redundant. From this point of view, Cyprus Airways constitutes the most important case of restructuring in recent years in Cyprus.

The restructuring process was carried out in two stages. First, a rescue plan for the company was implemented, the objective being approval of a EUR51 million loan for the purpose of meeting its short-term obligations. In the second stage, management at Cyprus Airways committed itself to drawing up a restructuring plan, within a specific deadline, aimed at ensuring the company's long-term viability.

The case of Cyprus Airways has a number of features in common with other recent cases of restructuring in Cyprus, such as payment of additional compensation (beyond that provided for by law) to redundant workers, efforts by public authorities to rescue enterprises experiencing difficulties (e.g Central Slaughterhouse of Kofinou) and the absence of a specific plan at the company level, created to support redundant workers and help them find new jobs.

Parties Involved in the Restructuring

The following parties were involved in the broader procedures leading to the creation of the restructuring plan for Cyprus Airways:

- A joint ministerial committee made up of the Ministry of Commerce, Industry and Tourism, the Ministry of Communications and Works, the Ministry of Employment and the Ministry of Finance.
- Management at Cyprus Airways.

- The trade union organisations representing Cyprus airways employees (SYNIKA, SIDIKEK, SYPKA, ASYSEKA, PASYPI).

It is important to note that the European Commission was indirectly involved in the progress of the consultations, setting conditions for the approval of the rescue plan as well as the restructuring plan for the company later on.

Consultation with Trade Unions

The restructuring of Cyprus Airways was divided into two main stages:

- Initially the company created a short-term plan known as the “rescue plan,” which was approved by the European Commission in May 2005. The contents of the rescue plan were announced for the first time in August 2004. This plan provided, inter alia, for the dismissal of 172 workers. However, the management never reached agreement with the union organisations, a fact that led to mediation by the Ministry of Labour. The proposal by the Ministry of Labour was announced on 28 November 2004. The new plan provided for more modest changes and the redundancy of 120 workers.
- Next, Cyprus Airways went ahead to create the restructuring plan for the company, which it presented for the first time in September 2005; the plan was submitted to the European Commission for approval in January 2006. The European Commission approved the restructuring plan in March 2007. This plan provided for the redundancy of another 388 employees of Cyprus Airways.

The employees’ trade union organisations were not involved in designing either the rescue plan or the restructuring plan. The union organisations were invited to hold discussions with management on the basis of plans that had already been worked out.

In the case of the rescue plan, the deadlock reached in the bargaining caused the Ministry of Employment to mediate. The Ministry’s mediation committee submitted a conciliation proposal that was accepted by only three of the five unions. Despite the rejection of the plan by two union organisations, it was implemented and sent for approval to the European Commission (Community authorities had set approval of the rescue plan as a basic condition for the approval of a EUR51 million loan to Cyprus Airways to be guaranteed by the Cypriot state).

Following this, management at Cyprus Airways had six months to draw up a restructuring plan that would ensure the long-term viability of the company (and be acceptable to the unions).

This plan was announced in late September. The unions complained about the delay in announcing the plan as well as their exclusion from the procedures for drawing it up. By and large, the short deadlines set by the European Commission on the one hand and the worsening financial situation of Cyprus Airways on the other, appear to have prevented long-term consultations in which the unions would have been more involved.

Consultations with the unions on the restructuring plan lasted around three months (from late September 2005 until early January 2006). First, the consultations helped the employees and the unions to realise that it was necessary to create a drastic restructuring plan, due to the serious financial problems plaguing the company as a result of market liberalisation. The consultation process with the employees contributed, that is, to the unions’ acceptance of the restructuring plan, and therefore to the rescue of the company itself and a substantial number of jobs.

As a whole, the following issues were discussed in the context of the rescue and restructuring plan for Cyprus Airways:

- Which international destinations would be retained and which would not (abolition of loss-making routes, less frequent flights to other destinations).
- Issues regarding a decrease in the company's total employment costs (staff wages, benefits and terms and conditions of employment).
- Number of redundant staff, terms and conditions of departure and amount of severance pay.

Major Voluntary Exit Plan (Measures to Manage Changes)

The departure of the workers was carried out on the basis of a voluntary exit plan. The number of workers who became redundant on the basis of the restructuring plan is estimated at 388. This number was the result of a compromise between the requirements of the European Commission for a “drastic” reduction in the number of employees on the one hand, and the desire of the unions to save employees’ jobs wherever possible on the other. The workers who opted for redundancy received additional compensation over and above that provided for by law. The maximum amount of compensation paid to Cyprus Airways employees was equivalent to two years’ wages. The amount of compensation paid varied according to factors such as total time employed and wage scale. The company and the Ministry of Finance financed the payments.

State Guarantees Loan (Measures Anticipating Change)

The state guaranteed a loan of EUR51 million which was extended to Cyprus Airways so that the company could meet its short-term financial obligations (and remain viable). The European Commission’s condition for approving this loan was the design, within six months, of a restructuring plan that would ensure the company’s long-term viability. It is important to note that one of the basic reasons that the European Commission approved the loan had to do with social criteria (Cyprus Airways is one of the most important employers in Cyprus). The loan allowed Cyprus Airways to avoid the danger of bankruptcy. In conjunction with the restructuring plan, the loan helped the company survive in the new competitive environment and helped save a total of over a thousand jobs. It should be noted that the public authorities seem to have followed roughly the same procedure for saving the Kofinou Slaughterhouse.

Problems and Complaints about the Consultation Process

The trade union organisations complained of a lack of information from management (in particular with regard to the company’s restructuring plan). The information provided to the unions was judged to be insufficient. The unions asked to be given the studies drawn up by outside consultants. Consultations with the workers appear to have met with two difficulties. Firstly, the negotiations were carried out at a time when the “rules of the game” in the Cypriot air transport market (market liberalisation, abolition of state aid, etc.) were changing. It is estimated that this has destabilised, to some degree, the foundations on which management and the trade union organisations had based their discussions in the past. Secondly, the company’s worsening financial situation, the real danger of bankruptcy, as well as the strict schedules and requirements of the European Commission, caused the bargaining process to speed up, while at the same time decreasing redundant workers’ chances of finding jobs in other departments of subsidiaries of the group. Overall, the company’s restructuring process has helped Cyprus’s national air carrier to adapt to and survive in the new competitive environment that has emerged

from Cyprus's entry into the European Union. In its turn, this specific event has helped ensure more favourable conditions for the departure of employees now being made redundant, on the basis of certain measures included in the restructuring plan, as in the recent case of the 140 Cyprus Airways Ground Handling Services employees.

Specific Support for Redundant Workers (Measures to Create Jobs)

No explicit efforts have been made in the case of the company's rescue plan and the company's main restructuring plan to find redundant staff new jobs in other parts of the organisation or group. The reason no efforts were made to find employees new jobs lies in the fact that the company had been employing too many people. The only objective of the plan, as regards employment, was to reduce labour costs, either via re-negotiation of the terms and conditions of employment and employees' wages, or via the redundancy of a substantial part of the total workforce (voluntary exit plan). On the other hand, due to the low frequency and extent of restructurings in Cyprus, there are no specialised structures or services to support workers who become victims of collective dismissals. It seems that moreover there have been no specific attempts to monitor the effects of the restructuring at Cyprus Airways, despite the fact that the extent of the plan was unprecedented, by Cypriot labour market standards.

3.2.3

Utilisation of Social Dialogue to Ensure Higher Compensations than Those Provided For by Law (*British American Tobacco, Vassiliko Cement Work*)

Payment of additional compensation (beyond that provided for by law) to redundant workers is a common feature of restructuring cases in Cyprus. Collective agreements often foresee this option (construction, forestry), although in some cases they do not (industrial sector). On the whole, quite a few companies handed out higher sums of compensation than those provided for by law, such as Cyprus Airways, British American Tobacco and the Vassiliko Cement Work.

These restructuring cases seem to confirm, generally speaking, the safeguarding of favourable terms for the redundant staff working in branches and business where the trade union density is high. In the construction sector, the collective agreements of certain companies provide for the payment of higher compensations. A characteristic example is that of the Cyprus Forest Industries Ltd. Similar provisions also exist in the collective agreements of large companies in the mining industry or the cement industry. A common characteristic found in all the companies above is their high labour union membership. In the industrial sector, collective agreements do not foresee higher compensations than those provided for by the law. Nevertheless, after negotiations between labour unions and employers, the sums paid out in cases of dismissal are usually higher. The same applies to the tourist sector. Nevertheless, union representatives of the sector have noted unwillingness on the part of employers to pay out extra compensation in recent cases of dismissals, foreshadowing a possible change in the attitude of some employers for the duration of the current crisis.

Cement Factories Agreement Memorandum

After long procedures, the Cyprus Competition Committee approved the intention of the Cement Works of Vassiliko and Moni to merge. The Vassiliko Cement Works will proceed with the construction of a modern production unit in Vassiliko, take over the management of the cement production of Moni and acquire a number of its subsidiary companies in the building sector. In the future, the deal states that the cement production of Moni will be terminated or else significantly reduced.

The option to merge has led trade unions PEO and SEK to sign an Agreement Memorandum with the management of the Cement Plant of Vassiliko, regarding the compensations for the workers who will be laid off as redundant labour. This agreement underlines:

- The commitment to try and minimise the number of workers being laid off.
- The consultation procedures regarding the number of people who will be affected by the merge, based on collective agreements.
- The observance of legislation regarding collective redundancies and termination of employment.

The favourable terms and conditions included in the Memorandum will possibly lead, based on initial estimates, to dozens of workers leaving the factory.

The Case of British American Tobacco

Combining Active and Passive Measures during Restructuring

The case of BAT is particularly interesting in that this multinational company has put a multi-faceted restructuring scheme into effect that combines both active and passive measures. As far as the active measures are concerned, the company –on its own initiative– decided to create a mechanism to enable it to monitor and assist employees until they are reintegrated into the labour market. At the same time, the company has paid out a significant amount of compensation to any worker made redundant.

Stylised Facts

British American Tobacco has decided to terminate operations in Cyprus, leaving 89 employees redundant by the end of March 2006. On March 2006, production of cigarettes ceased at the British American Tobacco (BAT) factory in Cyprus, following a decision to transfer all production to other BAT factories in the EU during the first months of 2006.

Although the loss of jobs was substantial, especially for a country as small as Cyprus, there was no strong opposition from the employees. On the contrary, the negotiations between company management and the employees' representatives were carried out in a climate of cooperation, and the content of the agreement concluded on 8 December 2005, was considered particularly satisfactory. The agreement on the employees' terms of exit signed by company management and representatives of the Pancyprian Federation of Labour (PEO) and the Cyprus Workers' Confederation (SEK) provided for the following:

- Apart from the provisions of legislation on termination of employment, BAT granted to everyone affected by the redundancies, an ex gratia payment equal to two months' pay for each year of service. In addition, the company granted to all employees made redundant an ex gratia payment equal to two months' pay. With regard to the above-mentioned compensation, both sides agreed that the amounts granted to each redundant employee would in no circumstances exceed the amount they would have received if they had stayed on the job until retirement (at age 65).
- The above-mentioned compensation has been calculated on the basis of the pay of the redundant workers on the date that their employment is to be terminated. In this context, it is worth noting that the company-level collective labour agreement between BAT and SEK/ PEO, which expired on 31 December 2005, has been renewed before the company finally closed down, so that the compensation granted may be calculated on the basis of the new pay increases.
- The employees affected had to take all leave coming to them before the date of termination of employment. The company would pay for any leave not taken.

After examining cases of restructuring that have occurred in Cyprus over the past few years, a series of interesting observations arise concerning the characteristics and the outcomes of the negotiations and processes that take place for preventing or dealing with collective redundancies. The table below gives us an overview of the restructuring cases included in this background paper. Specifically:

- The kind of initiatives followed (in preventing and/or managing restructuring).
- The parties taking part in the various processes.
- The reasons that have led to the restructuring of a business.
- The measures taken by a business in answer to its problems.
- Whether the negotiations were characterised by agreement or conflict.
- The key-actors that intervened in case of a dead-end in negotiations or the factors that contributed to a smooth exchange in the talks (i.e. social dialogue and social capital).
- The negotiations' most significant results for employees.
- Whether there were any job creation measures or not.

Reasons behind restructuring: Anticipating or managing restructuring?

Five cases out of a total of eight that have been examined in the context of the present report are not only aimed at helping to prevent restructurings but also at managing their consequences. More specifically, the double aim of measures being decided arises from the fact that a business proceeds with dismissing some of its workers in order to improve its competitiveness as well as save the remaining work positions. At the same time, the business promotes targeted initiatives (mainly of a passive character) for employees being made redundant (Arab Bank, BAT, Cyprus Airways, Limassol and Larnaka Ports). Only two cases were recorded in which initiatives had a purely preventative character and did not involve redundancies (Muskita and Alco, Kofinou Slaughterhouse).

Parties involved in restructuring procedures

There is no doubt that the management and trade union organisations maintain a central role in the processes which precede and follow a restructuring. Nevertheless, in five of the cases examined, there was either indirect or direct involvement recorded by public authorities. The involvement may have been due to various factors related to:

- The nature of the business. The state intervenes whenever it has a share in the property capital of a company or its infrastructure (Cyprus Airways, Kofinou Slaughterhouse, Limassol and Larnaka Ports).
- Whether the negotiations were carried out adversely or amicably (Arab Bank).
- The seriousness of the restructuring in terms of employment and/or the urgency of the changes underway regarding the safeguarding of the business and jobs (Cyprus Airways, Kofinou Slaughterhouse).

Main reasons behind the decision to restructure

The reasons leading up to restructuring vary significantly from business to business. Seven out of eight cases seem to be related to a deficit in structural competitiveness. One case alone had to do with coincidental factors due to reduced demand because of the international crisis (Muskita, Alco). In addition, the restructuring of the Vassilikos Cement Work was related to the company's decision to merge with Moni Cement Works. It is also worth mentioning that three of the cases examined are directly related to Cyprus' entry into the EU (Cyprus Airways, Kofinou). These companies, which belong to the semi-private sector of Cyprus, met with serious financial difficulties after the liberalisation of the services they provide and also after private competitors entered into the market.

Main restructuring measures

As with the reasons that lead to restructuring, the measures adopted also vary from business to business. Undoubtedly, the largest section of measures recorded, are related to employee dismissals (5 out of 8 cases). The way in which dismissals are carried out is also a distinguishing feature between the public and private sector. The public sector offers employees measures of a voluntary nature (i.e. Cyprus Airways) or early-retirement schemes (Limassol and Larnaka Airports). On the contrary, the restructuring plans recorded in the private sector do not provide these kinds of options to employees (BAT, Arab Bank). One exception is the case of the Vassiliko Cement Works. It should be noted that in three cases (Cyprus Airways, Kofinou, Cyprus Airways Ground Handling Services), the government took on an active role in managing the restructuring by either providing guarantees on loans granted to businesses (Cyprus Airways, Kofinou), or by funding the compensation to employees (Cyprus Airways Ground Handling Services). Finally, in two cases only, businesses did not proceed with dismissals but in consultation with the workers, reduced working hours instead, in this way aiming at overcoming the difficulties brought on by the global recession (Muskita, Alco).

Labour disputes

There were labour disputes in only three cases (Arab Bank, Cyprus Airways, Cyprus Airways' Ground Handling Services) out of the eight cases of restructuring examined in total. In general, negotiations in the five remaining cases were regarded to have been carried out under particularly amicable conditions. In one case however, trade union organisations moved ahead with strike action (Cyprus Airways' Ground Handling Services).

Key-actors and Social Capital resources

The quality of social dialogue in Cyprus undoubtedly plays a determinative role in the favourable outcome of negotiations between employee and employer, and that includes cases of restructuring. As noted by Soumeli (2006), 'social dialogue in Cyprus creates a climate of trust, enabling social partners to intervene and take joint decisions on issues of decisive importance'. The quality of social dialogue in Cyprus can be seen as a fundamental immaterial asset, a part of

the local *social capital*¹⁴, with a particularly beneficial effect on the outcome of the various relations that develop between workers, businesses and the state.

The Cypriot state has proven that in situations in which bipartite negotiations have led to an impasse, it possesses the ability to guide opposite sides to a mutually acceptable solution. Particular praise should be given to the Mediating Service¹⁵ of the Labour Relations Department (Ministry of Labour and Social Relations), which has played a decisive role in bridging labour disputes. As the service itself notes about its activities, the mediator has no authority to decide on how the dispute should be settled, and does not try to convince the two sides to accept the settlement he/she believes most appropriate. Essentially, the mediator works towards achieving the settlement which will be accepted by both sides. Procedures followed during the mediation in a labour dispute and the types of labour disputes for which the Department may be called upon to mediate are laid out in the Industrial Relations Code¹⁶. It is also worth mentioning the Cyprus Central Bank's intervention in a confrontation between Arab Bank and the Cyprus Union of Bank Employees (ETYK) in 2006. The mediation allowed negotiations to continue and Arab Bank's management to withdraw its decision to abandon the Cypriot market.

Finally, two cases should be mentioned in which the intervention of the government proved decisive, particularly when the speedy outcome of a solution was of an urgent nature due to economic factors (Cyprus Airways) or the general complexity of the situation (Cyprus Airways' Ground Handling Services). In both cases, the state contributed by funding the compensation that redundant employees received.

Results

In all cases under examination with management of the impact of restructuring, workers received higher compensations than provided for by law. This specific outcome is undoubtedly the most important aspiration from the employee's perspective as much as more collectively, the main result and characteristic of restructuring in Cyprus. It is worth mentioning that this result applies to both private sector businesses and public sector businesses as well. Out of six such cases, only one company entered the process of anticipating active initiatives aimed at reintegrating redundant staff into the job market (BAT). This particular event seems to owe more to the policies this multinational company implements on an international level, rather than the claims made by workers in Cyprus for employment reintegration initiatives. On the whole, there is no doubt that the absence of specially designed active measures for redundant personnel is related, on the one hand, to the condition of almost full employment prevalent in the Cyprus labour market during the past decade, and on the other hand, to the small number as well as limited impact of restructurings, which up until now have dissuaded public authorities or social partners to seek more systematic or composite ways of dealing with their consequences. The current rise of unemployment, due to the international crisis, might heighten among social partners and policy makers the necessity to develop such measures.

¹⁴ According to French sociologist Pierre Bourdieu, social capital is the 'the aggregate of the actual or potential resources which are linked to possession of a durable network of more or less institutionalized relationships of mutual acquaintance and recognition'. Robert Putnam mentions that 'whereas physical capital refers to physical objects and human capital refers to the properties of individuals, social capital refers to connections among individuals – social networks and the norms of reciprocity and trustworthiness that arise from them'.
