

Information – Security Data

Context

From 1st July 2009, security data has to be provided **before** arrival or departure of the goods into or out of the Community customs territory.

What does "security data" exactly mean?

It is the information in other words it is the "data elements" detailed in [Annex 30A](#) of the Customs Code Implementing Provisions.

Transitional period

The transitional period in place between 1st July 2009 and 31st December 2010 for the provision of [Entry Summary Declaration](#) and [Exit Summary Declaration](#), implies that these data elements are requested as of 1st July 2009 only for export declarations.

Data requirements

The data requirements can be found in Tables 1 to 6 of [Annex 30A](#).

Annex 30A defines the following specific datasets:

- **at entry**, datasets for some modes of transport (air, sea, inland waterways, rail and road) and for AEOs;
- similarly, **at exit**, datasets for air, sea, inland waterways, air and ship supplies and for AEOs;
- Finally, there are specific datasets for postal and express consignments operations at entry at exit.

The requirements are explained in the [accompanying explanatory notes](#) that contain data definitions and specifications.

Attention must be drawn to the fact that from 1st July 2009, the registration numbers attributed nationally will be available at Community level ([EORI](#)). Therefore, all registration numbers of persons that, according to legislation, must be established in the Community will be controlled.

Simplified procedures

Annex 30A also contains harmonized datasets in table 7 of [Annex 30A](#) for the various types of simplified procedures.
