map (LDM)  | conditions; it includes information received from on-board sensors and from CAM and DENM messages (ETSI TR 102 893) [5]
---|---
protocol control | The protocol control assets select an appropriate message transfer protocol for an outgoing message request and send the message to the lower layers of the protocol stack in a format that can be processed by those layers. Incoming messages are converted into a format that can be handled within the C-ITS station and passed to the relevant functional asset for further processing (ETSI TR 102 893) [5]

1.3. **Strategy for information security**

1.3.1. *Information security management system (ISMS)*

1. Each C-ITS station operator shall operate an ISMS in accordance with ISO/IEC 27001 and with the constraints and additional requirements laid down in this section.

2. Each C-ITS station operator shall determine external and internal issues relevant to C-ITS, including:
   - COM(2016) 766 final [10];
   - the GDPR [6].

3. Each C-ITS station operator shall determine parties that are relevant to the ISMS and their requirements, including all C-ITS stakeholders.

4. The ISMS scope shall include all the operated C-ITS stations and all other information-processing systems that process C-ITS data in the form of C-ITS messages that comply with the following standards:
   - CAM [7]
   - DENM [8]
   - IVIM [9]
   - SPATEM [9]
   - MAPEM [9]
   - SSEM [9]
   - SREM [9]

5. Each C-ITS station operator shall ensure that its information security policy is consistent with this policy.

6. Each C-ITS station operator shall ensure that its information-security objectives include and are consistent with the security objectives and high-level requirements in this policy.

7. C-ITS station operators shall classify the information referred to in section 1.4.

8. C-ITS station operators shall apply an information security risk assessment process as set out in section 1.5 at planned intervals or when significant changes are proposed or occur.

9. C-ITS station operators and/or C-ITS station manufacturers shall determine requirements for mitigating security risks identified in the information security risk assessment process, in line with section 1.6.
(10) C-ITS station manufacturers shall design, develop and assess C-ITS stations and other information processing systems so as to ensure that they meet applicable requirements.

(11) C-ITS station operators shall operate C-ITS stations and all other information-processing systems that implement appropriate information security risk treatment controls in line with section 1.6.

1.4. Information classification

This section lays down the minimum requirements for information classification. This does not prevent any C-ITS stakeholder from applying more stringent requirements.

(12) C-ITS station operators shall classify handled information, whereby a security category can be represented as:

Security Category information = {(confidentiality, impact), (integrity, impact), (availability, impact)};

(13) C-ITS stakeholders shall classify managed information, whereby a security category system can be represented as:

Security Category information system = {(confidentiality, impact), (integrity, impact), (availability, impact)};

(14) The acceptable values for potential impact are low, moderate and high, as summarised Table 1.

Table 1 Potential impact definitions for each security objective of confidentiality, integrity and availability

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>Preserving authorised restrictions on information access and disclosure, including means for protecting personal privacy and proprietary information</td>
<td>The unauthorised disclosure of information could be expected to have a limited adverse effect on organisational operations, organisational assets or individuals.</td>
<td>The unauthorised disclosure of information could be expected to have a serious adverse effect on organisational operations, organisational assets or individuals.</td>
<td>The unauthorised disclosure of information could be expected to have a severe or catastrophic adverse effect on organisational operations, organisational assets or individuals.</td>
</tr>
<tr>
<td>Integrity</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Guarding against improper information modification or destruction; this includes ensuring information non-repudiation and authenticity</td>
<td>The unauthorised modification or destruction of information could be expected to have a limited adverse effect on organisational operations, organisational assets or individuals.</td>
<td>The unauthorised modification or destruction of information could be expected to have a serious adverse effect on organisational operations, organisational assets or individuals.</td>
<td>The unauthorised modification or destruction of information could be expected to have a severe or catastrophic adverse effect on organisational operations, organisational assets or individuals.</td>
</tr>
</tbody>
</table>
(15) The following information classification impact types shall be considered in terms of the degree of damage or costs to the C-ITS service and C-ITS stakeholders caused by an information security incident:

- road safety — where the impact places road users at imminent risk of injury;
- safety — where the impact places any of the C-ITS stakeholders at imminent risk of injury;
- operational impacts — where the impact is substantially negative for road traffic efficiency, or other societal impact such as environmental footprint and organised crime;
- legal — where the impact results in significant legal and/or regulatory compliance action against one or more of the C-ITS stakeholders;
- financial — where the impact results in direct or indirect monetary costs for one or more of the C-ITS stakeholders;
- privacy – the GDPR having both legal and financial impact;
- reputation — where the impact results in reputational damage for one or more C-ITS stakeholders and/or the C-ITS network, e.g. adverse press coverage and/or major political pressure on a national or international scale.

(16) C-ITS stakeholders shall respect the following minimum impact values for the information handled:

<table>
<thead>
<tr>
<th>Information originated by fixed C-ITS stations</th>
<th>Information originated by mobile C-ITS stations</th>

### 1.5. Risk assessment

#### 1.5.1. General

(17) Risk assessment shall be periodically conducted in line with ISO/IEC 27005. It shall include appropriate documentation of:

- the scope of the risk assessment, i.e. the system being assessed and its boundaries and system purpose, and the information that is handled;
- the security risk criteria;
- risk assessment, including identification, analysis and evaluation.

#### 1.5.2. Security risk criteria

(18) Risk evaluation criteria shall be determined considering the following aspects:

- the strategic value of the C-ITS service and C-ITS network to all C-ITS stakeholders;
- the strategic value of the C-ITS service and C-ITS network to the C-ITS station operator of the service;
- the consequences for the reputation of the C-ITS network;
- legal and regulatory requirements and contractual obligations.

(19) Risk impact criteria shall be determined in the light of the information classification impact types referred to in section 1.4.

(20) Risk acceptance criteria shall include the identification of risk levels that are unacceptable for the C-ITS service and C-ITS stakeholders, by impact type.

#### 1.5.2.1. Risk identification

(21) Risks shall be identified in accordance with ISO/IEC 27005. The following minimum requirements shall apply:

- the main assets to be protected are C-ITS messages as referred to in section 1.3.1;
supporting assets should be identified, including:

- information used for C-ITS messages (e.g. local dynamic map, time, protocol control, etc.);
- C-ITS stations and their software, configuration data and associated communication channels;
- central C-ITS control assets;
- every entity within the EU CCMS;
- threats to those assets, and their sources, shall be identified;
- existing and planned controls shall be identified;
- vulnerabilities that can be exploited by threats to cause harm to assets or to the C-ITS stakeholders shall be identified and described as incident scenarios;
- the possible consequences of security incidents on the assets shall be identified on the basis of the information classification.

1.5.2.2. Risk analysis

(22) The following minimum requirements apply to risk analysis:

- the impact of the identified information security incidents on the C-ITS service and the C-ITS stakeholders shall be assessed on the basis of the information and information system security category, using at least the three levels set out in section 1.4;
- the levels of impact shall be identified for:
  - the total existing C-ITS network/services; and
  - an individual C-ITS stakeholder/organisational entity;
- the highest level shall be taken as total impact;
- the likelihood of the identified incident scenarios shall be assessed using at least the following three levels:
  - unlikely (value 1) – the incident scenario is unlikely to occur / difficult to realise or the motivation for an attacker is very low;
  - possible (value 2) – the incident scenario may occur/ is possible to realise or the motivation for an attacker is reasonable;
  - likely (value 3) – the incident scenario is likely to occur / easy to realise and the motivation for an attacker is high;
- the levels of risk shall be determined for all identified incident scenarios on the basis of the product of impact and likelihood, resulting in at least the following risk levels: low (values 1,2), moderate (values 3,4) and high (values 6,9), defined as follows:
Table 3: Risk levels

<table>
<thead>
<tr>
<th>Risk levels as product of impact and likelihood</th>
<th>Likelihood</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>unlikely (1)</td>

</tr>
<tr>
<td>high (3)</td>
<td>high (9)</td>
</tr>
<tr>
<td>high (3)</td>
<td></td>
</tr>
</tbody>
</table>

1.5.2.3. Risk evaluation

(23) Levels of risk shall be compared against risk evaluation criteria and risk acceptance criteria to determine what risks shall be subject to treatment. At least moderate- or high-level risks applicable to the C-ITS service and C-ITS network shall be treated, in line with section 1.6.

1.6. Risk treatment

1.6.1. General

(24) Risks shall be treated in one of the following ways:

- risk modification by using controls identified in section 1.6.2 or 1.6.3, so that the residual risk can be reassessed as being acceptable;
- risk retention (where the level of risk meets the risk acceptance criteria);
- risk avoidance.

(25) Risk sharing or transfer is not allowed for risks to the C-ITS network.

(26) Risk treatment shall be documented, including:

- the statement of applicability in line with ISO 27001, which sets out the necessary controls and determines:
  - the residual likelihood of occurrence;
  - the residual severity of impact;
  - the residual risk level;
  - the reasons for risk retention or avoidance.

1.6.2. Controls for C-ITS stations

1.6.2.1. Generic controls

(27) C-ITS stations shall implement appropriate countermeasures to modify risk, in line with section 1.6.1. Those countermeasures shall implement generic controls as defined in ISO/IEC 27001 and ISO/IEC 27002.

1.6.2.2. Controls for communication between C-ITS stations

(28) The following minimum mandatory controls shall be implemented on the sender side:
Table 4: Controls on the sender side

<table>
<thead>
<tr>
<th>Confidentiality</th>
<th>Information originated by fixed C-ITS stations</th>
<th>Information originated by mobile C-ITS stations</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>-</td>
<td>The personal data contained in messages shall be secured using an adequate AT change procedure to ensure a level of security adequate to the risk of re-identification of drivers based on their broadcasted data. Therefore, C-ITS stations shall change ATs adequately when sending messages and shall not re-use ATs after a change, except in cases of non-average driver behaviour.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Integrity</th>

<th>All messages shall be signed in accordance with TS 103 097 [14].</th>
</tr>
</thead>
<tbody>
<tr>
<td>Availability</td>
<td>-</td>
<td>-</td>
</tr>
</tbody>
</table>

(29) The following minimum mandatory controls shall be implemented on the receiver side:

Table 5: Controls on the receiver side

<table>
<thead>
<tr>
<th>Confidentiality</th>
<th>Information originated by fixed C-ITS stations</th>
<th>Information originated by mobile C-ITS stations</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>-</td>
<td>Received personal data should be retained for as short a time as possible for business purposes, with a maximum retention of five minutes for raw and identifiable data-elements. A received CAM or SRM shall not be forwarded/broadcast. A received DENM may be forwarded/broadcast only within a limited geographical area.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Integrity</th>
<th>The integrity of all messages used by ITS applications shall be validated in accordance with TS 103 097 [14].</th>
<th>The integrity of all messages used by ITS applications shall be validated in accordance with TS 103 097 [14].</th>
</tr>
</thead>
<tbody>
<tr>
<td>Availability</td>
<td>-</td>
<td>A received SRM shall be processed and produce an SSM broadcast to the originator of the SRM.</td>
</tr>
</tbody>
</table>

(30) To support the security requirements of confidentiality, integrity and availability set out in the tables above, all C-ITS stations (mobile C-ITS stations (including vehicle C-ITS stations) and fixed C-ITS stations) shall be assessed and certified using security assessment criteria as specified in the ‘common criteria’ / ISO 154082. Due to the different features of the different types of C-ITS station and different location privacy requirements, different protection profiles may be defined.

---

1 The definition of average driving behaviour shall be based on relevant statistical analysis of the driving behaviour in the European Union, e.g. based on data from the German Aerospace Centre (DLR).

2 ‘Common criteria’ portal: [http://www.commoncriteriaportal.org/cc/](http://www.commoncriteriaportal.org/cc/)
(31) All protection profiles and related documents applicable for the security certification of the C-ITS stations shall be evaluated, validated and certified in line with ISO 15408, applying the Mutual Recognition Agreement of information technology security evaluation certificates of the Senior Officials Group on Information Systems Security (SOG-IS), or an equivalent European cybersecurity certification scheme under the relevant European cybersecurity framework. In the development of such protection profiles, the scope of the security certification of the C-ITS station may be defined by the manufacturer, subject to assessment and approval of the CPA and a SOG-IS conformity assessment body or at least equivalent as described in the next paragraph.

(32) Given the importance of maintaining the highest possible security level, security certificates for C-ITS stations shall be issued under the common criteria certification scheme (ISO 15408) by a conformity assessment body recognised by the management committee in the framework of the SOG-IS agreement, or issued by a conformity assessment body accredited by a national cybersecurity certification authority of a Member State. Such a conformity assessment body shall provide at least equivalent conditions of security evaluation as envisaged by the SOG-IS Mutual Recognition Agreement.

1.6.2.3. Controls for C-ITS stations as an end-entity

(33) C-ITS stations shall comply with the certificate policy [1] according to their role as an EU CCMS end-entity.

1.6.3. Controls for EU CCMS participants

(34) EU CCMS participants shall comply with the certificate policy [1] according to their role in the EU CCMS.

1.7. Compliance with this security policy

(35) C-ITS station operators shall periodically request and obtain certification for compliance with this policy following the guidelines for an ISO 27001 audit in [12].

(36) The auditing body shall be accredited and certified by a member of European Accreditation. It shall fulfil the requirements of [11].

(37) With the objective of obtaining certification, C-ITS station operators shall generate and maintain documents addressing the requirements on documented information in [3], clause 7.5. In particular, C-ITS station operators shall generate and maintain the following documents related to the ISMS:

- scope of the ISMS (section 1.3.1 and [3], clause 4.3);
- information security policy and objectives (section 1.3.1 and [3], clauses 5.2 and 6.2);
- risk assessment and risk treatment methodology details (section 1.5 and [3], clause 6.1.2);

3 In the road transport sector, SOG-IS has already been involved in the smart tachograph security certification, for example. The SOG-IS Agreement is currently the only scheme in Europe that can support the harmonisation of security certification of electronic products. At this stage, SOG-IS supports only the ‘common criteria’ process, so the C-ITS stations must be assessed and certified in line with the ‘common criteria’; see https://www.sogis.org/
• risk assessment report (section 1.5 and [3], clause 8.2);
• statement of applicability (section 1.6 and [3], clause 6.1.3d);
• risk treatment plan (section 1.6 and [3], clauses 6.1.3e and 8.3);
• documents required for the implementation of selected controls (section 1.6 and [3], Annex A).

(38) In addition, C-ITS station operators shall generate and maintain the following records as evidence of results achieved:
• records of training, skills, experience and qualifications ([3], clause 7.2);
• monitoring and measurement results ([3], clause 9.1);
• internal audit programme ([3], clause 9.2);
• results of internal audits ([3], clause 9.2);
• results of the management review ([3], clause 9.3);
• results of corrective action ([3], clause 10.1).
