Food for thought

Simon Broek

# Thoughts on the concept of learning

- Learning is a broad concept having **different intensities**, such as adding bits of new knowledge to your body of knowledge and overthrowing everything you once understood as being true.
- In addition, learning can have **different purposes**; for instance being able to answer a question, to carry out a task, or using your knowledge and understanding to develop new knowledge and start innovations.

	<b>Intensity of learning: added to the (personal) existing body of knowledge (constructive)</b>		
<b>Purpose of learning: directly use knowledge and understanding</b>			<b>Purpose of learning: use what is learned to develop new knowledge and start innovations and new opportunities</b>
	<b>Intensity of learning: creating a (personal) 'paradigm shift' (disruptive)</b>		

	Intensity of learning: added to the (personal) existing body of knowledge (constructive)		
Purpose of learning: directly use knowledge and understanding	<p>Learning contributes to slightly improving conducting a task.</p> <p>For example: instruction course on working with an ICT tool</p>	<p>Learning contributes to build further towards new knowledge, innovation and new opportunities</p> <p>For example: a language course/ specific non-work related subject course</p>	Purpose of learning: use what is learned to develop new knowledge and start innovations and new opportunities
	<p>Learning contributes to do things differently on the basis of a new understanding.</p> <p>For example: a training on management skills or a personality training</p>	<p>Learning contributes to changes in career, work, society etc.</p> <p>For example: learning by experiencing a life-changing, disruptive event</p>	
	Intensity of learning: creating a (personal) 'paradigm shift' (disruptive)

# Aspects characterizing Adult Learning (quality), differentiating it from initial education

- it should be motivational for the learners,
- the learning environment should be rich and reflective,
- the provision should be tailor made, learner centred and
- attuned to the specific learning needs of the adult learning.
- Furthermore, the provision should respect the background of the adult learner and
- the knowledge and experience of the adult learner should be used as resource in the learning process.
- In addition, the provision should be offered in a flexible manner in terms of duration, time, and place.
- Finally, the learning should be both relevant for the adult learner and – potentially – other stakeholders (e.g. employers, societal organisations ).

# Features that influence the development and delivery of formal training programs:

- The extent to which learning is valued and rewarded within the enterprise
- The role of knowledge in setting the competitive climate for the enterprise
- The size of the workplace or site
- The range of products, processes, and/or services provided by the work-place
- The capacity and willingness of the workplace to network with other related organizations

EC (2010), Key competences for adult learning professionals Contribution to the development of a reference framework of key competences for adult learning professionals
