### NOTE TO THE FILE

**Subject: FEBRUARY 2010 update on recent agricultural commodity and food price developments in the EU**

#### Development in agricultural prices

The prices for major agricultural commodities showed a mixed picture in January 2010. While the prices for soft wheat, maize, skimmed milk powder, cheese (Edam), beef and poultry meat increased, the quotations for durum wheat, butter and pork fell in January 2010 as compared to December 2009. Barley prices remained unchanged (cf. Table 1).

For several products, January 2010 price levels were still below the levels observed one year ago (soft wheat (-7%), durum wheat (-16%), barley (-7%), beef (-3%), pig meat (-4%) and poultry meat (-6%)) (cf. Table 2, Graphs A2 and A3 in annex). January 2010 price levels for maize (+14%) and for bulk dairy products like skimmed milk powder (+14%) and butter (+35%) and prices for cheese (Edam) (+4%) were remarkably higher than in January 2009 (cf. Table 2, Graph A4 in annex).

**Table 1 Change in EU agricultural commodity prices (% , January 2010 compared to December 2009)**

|                | Soft wheat | Durum wheat | Maize | Barley | SMP | Butter | Cheese (Edam) | Beef | Pork | Poultry |

### Development in consumer prices

While prices for major agricultural commodities came back to levels comparable to those reached before the start of the price surge, consumer prices for food still remain at rather high levels (including prices for the staple foods bread and cereals based products, meat and dairy products) (cf. Graphs A1-A4 in annex). Food prices in January 2010 were 9.8% higher than in January 2007. Food price inflation (+9.8%) was higher than the overall consumer price inflation (+7.1%) over the last three years. Food prices fell by 0.7% in January 2010 as compared to January 2009 and increased by 0.6% in January 2010 as compared to December 2009 (cf. Tables 3 and 4).

**Table 3 Change in EU consumer prices for food (%), January 2010 compared to December 2009)**

The comparison of monthly and annual rates of change of overall consumer price inflation and food price inflation in the EU in January 2010 shows the following: the annual and monthly rates of change of the general inflation amounted to +1.7% and -0.5%, respectively, while the annual rate of change in food price inflation was still negative (-0.7%) whereas the monthly rate of change in food price inflation was positive (+0.6%) (cf. Graph 1 and Graph A5 in annex).

**Graph 1 Annual rate of change in EU overall and food consumer prices (% , 1997-Jan2010)**

Source: Eurostat.

Regarding the relation between agricultural commodity and food price developments, it should be noted that lower cereals prices could be expected to release the pressure on the consumer prices for bread and cereals based products (though, respective consumer prices in January 2010 were still 14.9% higher than in January 2007 and 0.5% lower than one year before, while bread wheat prices in January 2010 were 19.1% lower than in January 2007 and 6.9% lower than in January 2009). This should also contribute to ease animal product and meat price increases (both at agricultural and consumer level) due to the price-lowering impact on feed as a major input cost factor (January 2010 consumer prices for meat were 8.6% higher than in January 2007 and 0.2% lower than one year ago, while agricultural market prices for beef, pork and poultry meat were 3.1%, 1.7% and 2.8% higher in January 2010 as compared to January 2007 and 3.2%, 4.5% and 6.3% lower, respectively, as compared to January 2009).

Lower raw milk and dairy commodity prices at producer level should also contribute to ease consumer prices for derived products by tendency. The consumer prices for milk, cheese and eggs in January 2010 remained 13.1% higher than in January 2007, but were 2% lower than in January 2009. Agricultural market prices for skimmed milk powder decreased by 8.2% while butter and cheese (Edam) prices were 23.2% and 17.1% higher in January 2010 as compared to January 2007. Skimmed milk powder, butter and cheese (Edam) prices were 14.1%, 35.2% and 9.1% higher in January 2010 as compared to one year ago.

Concerning food price formation at retail level, it should be kept in mind that the developments of the prices of non-agricultural cost components (labour, capital and energy costs, margins along the downward-supply chain) have a much greater weight on food price inflation than changes in the prices for raw agricultural components.

In this context, it should be noted that the potential for EU food consumer prices to fall would particularly be limited by the fact that non-agricultural costs of food supply in the EU like energy and capital related costs along the downward supply chain appear to be much higher nowadays than in the past. Despite their sharp fall in the second half of 2008, current energy prices (crude oil, Brent Europe) are still quoted around four times higher than their long-term historic averages (and are forecast to stay, at least, at these levels), and capital costs appear to have increased remarkably over recent times (for example, agricultural (borrowed) capital costs are estimated to have increased by 20% over the period 2005 until 2009).
