The		FIL:- 2027 C-	

ALBANIA is an **Emerging Innovator** with performance at 41.1% of the EU average. Performance is below the average of the Emerging Innovators. Performance is increasing at a rate lower than that of the EU (8.5%-points). The country's performance gap to the EU is becoming larger.

Relative strengths

Environment-related technologies Sales of innovative products Product innovators Lifelong learning Population with tertiary education

Relative weaknesses

People with above basic overall digital skills R&D expenditures in the public sector R&D expenditure in the business sector Medium and high-tech goods exports Public-private co-publications

Strong increases since 2016

Environment-related technologies Population with tertiary education Most cited publications

Strong decreases since 2016

Foreign doctorate students Innovative SMEs collaborating with others Product innovators

Strong increases since 2022

Design applications
Most cited publications

Strong decreases since 2022

Innovative SMEs collaborating with others Knowledge-intensive services exports Product innovators

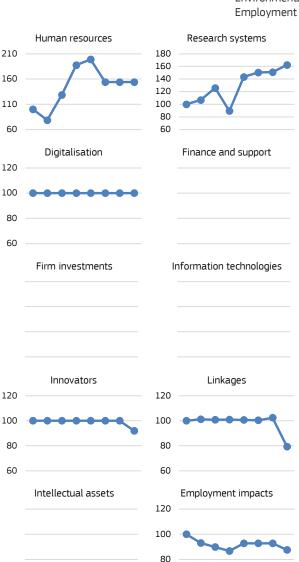

The second column shows performance relative to that of the EU in 2023. Colours next to the column show matching colour codes: dark green: above 125% of the performance of the EU in 2023; light green: between 100% and 125%; light orange: between 70% and 100%; dark orange: below 70%. The next columns show performance change over time between 2016 and 2023 and between 2022 and 2023, with scores relative to those of the EU in 2016. Positive (negative) performance changes are shown in green (red).

^{*} Results for Albania are less reliable due to limited data availability. ** Data are not available, and it has been assumed that the normalised and relative to EU values equal 0, the same as the worst performing country. This assumption has been made to maximize data availability to allow to include Albania in the EIS and is in line with the latest known low R&D intensity of 0.15 in 2008.

The graph on the left shows the evolution of **innovation performance over time** against the performance of the country in 2016. Innovation performance initially increased and then declined in 2018. After a more modest increase in 2019, performance increased strongly in 2020 and declined in 2021, followed by a modest increase in 2022 and a modest decrease in 2023, leading to a 17% performance increase in 2023.

The graphs below show the evolution of innovation performance in the different **innovation dimensions** against the performance of the country in 2016. Performance increased most strongly for Human resources, Research systems and Environmental sustainability. Performance declined for Innovators, Linkages and Employment impacts...

Structural differences with the EU are shown below:

- Albania has lower per capita income, but a faster growing economy. SMEs account for a larger share of turnover.
- FDI net inflows add positively to the innovation climate, Entrepreneurial Activity, Top R&D spenders, and Buyer sophistication add negatively.
- Information on Innovation profiles is not available.
- Government procurement is below the EU average as driver of research and innovation.
- Information on Climate change related indicators is not available.
