## STATEMENT OF DATA CONFIDENTIALITY CLAIMS

*The following statement applies to submissions to the United States Environmental Protection Agency (US EPA).*

### Statement of No Data Confidentiality Claim

No claim of confidentiality is made for any information contained in this report on the basis of its falling within the scope of Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 10 (d) (1) (A), (B), or (C).

**Company:** *Syngenta Seeds, LLC*

**Company Representative:**

October 26, 2021

Date

These data are the property of Syngenta Seeds, LLC and, as such, are considered to be confidential for all purposes other than compliance with the regulations implementing FIFRA Section 10. Submission of these data in compliance with FIFRA does not constitute a waiver of any right to confidentiality that may exist under any other provision of common law or statute or in any other country.

*The following statement applies to submissions to regulatory agencies and other competent authorities other than the US EPA and all other viewers.*

## GOOD LABORATORY PRACTICE COMPLIANCE STATEMENT

This is not a study as defined by 40 CFR Part 160.3 and is therefore not subject to Federal Insecticide, Fungicide, and Rodenticide Act Good Laboratory Practice Standards (GLPS; US EPA, 1989). However, all components of this analysis were performed according to accepted scientific practices, and relevant records have been retained.

## 1.0 EXECUTIVE SUMMARY

Syngenta has developed maize (*Zea mays* L., corn) line derived from transformation event 5307.

A systematic literature search and scoping review for the 5307 maize was conducted following the requirements of the European Food Safety Authority (EFSA) technical note on literature searching to GMO risk assessment guidance in the context of an annual post-market environmental monitoring (PMEM) report on GMOs (EFSA 2019).

A broad literature search was performed using a pre-defined comprehensive search strategy over a collection of bibliographic databases, covering a database entry period from June 01, 2020 to July 01, 2021. A total of four public databases based on their coverage of scientific literature were searched via Ovid search interface. The records were de-duplicated after combining records retrieved from all the databases to generate unique references. Similarly, the internet pages of regulatory agencies and risk assessment bodies that are involved in the risk assessment of GMOs and post their risk assessments on their websites were searched.

This literature search identified a total of 220 records from database search, of which 219 were excluded at the title review stage and 1 record was found relevant after the full-text review stage. Similarly, the literature search identified a total of 77 records from the internet search, of which all of the 77 records were excluded at the full-text review stage. The assessment of the relevant information obtained from these records does not change the risk assessment for 5307 maize.

Therefore, the literature search results, and review support the existing safety assessment of the 5307 maize.

## 2.0 METHODS

### 2.1 Objective of the Scoping Review

The objective of this systematic literature search and scoping review was to search scientific publications in order to collect, identify, and assess evidence that is relevant to the risk assessment of 5307 maize in the context of an annual post-market environmental monitoring (PMEM) report on GMOs authorized in the EU market.

Syngenta developed maize plants derived from transformation event contains the gene *ecry3.1Ab*, which encodes the insecticidal protein eCry3.1Ab, and the gene *pmi*, which encodes the enzyme phosphomannose isomerase (PMI). The engineered protein eCry3.1Ab is a chimera of mCry3A and Cry1Ab. The native, full-length Cry1Ab from the soil bacterium *Bacillus thuringiensis* subsp. *kurstaki* is active against certain lepidopteran insect pests; however, the portion of Cry1Ab included in eCry3.1Ab has not preserved the activity of Cry1Ab against lepidopterans. The native Cry3A from *B. thuringiensis* subsp. *tenebrionis* is active against certain coleopteran insect pests of maize; it was modified to have enhanced activity against Western corn rootworm (*Diabrotica virgifera virgifera*) and other related coleopteran pests. The gene *pmi* (also known as *manA*) was derived from *Escherichia coli*

strain K-12. PMI enables transformed plant cells to utilize mannose as a primary carbon source; it was used as a selectable marker in the development of 5307 maize.

## 2.2 Formulating Review Questions and Clarifying Their Purpose

### 2.2.1 Review Question

The review question associated with this literature search was:

Do either food/feed products derived from 5307 maize or the intended traits have adverse effects on human and animal health and/or the environment?

This review question followed the PICO/PECO structure with key elements “Population, Intervention/Exposure, Comparator, and Outcomes” (Table 1).

**TABLE 1      Review Question in PICO/PECO Structure**

<b>Element</b>	<b>Components of Review Question</b>
<u>P</u> opulation	human and animal health and the environment
<u>I</u> ntervention/ <u>E</u> xposure	5307 maize, derived food/feed products, eCry3.1Ab and closely related variants and phosphomannose isomerase (PMI)
<u>C</u> omparator	conventional counterpart (if applicable)
<u>O</u> tcomes	adverse effects

### 2.2.2 Eligibility/Inclusion Criteria

High level key concepts for inclusion/exclusion criteria intended to establish relevance of retrieved records are provided in the order of importance or ease of finding information on the criteria within a publication (Table 2). The first failed eligibility/inclusion criterion was used as the primary reason for exclusion, and the remaining criteria were not assessed.

Expert knowledge on data used in the risk assessment of the GMO is required. Some examples of relevant data/information on the information/data requirements concept included in Table 2 are listed in Table 3. If certain data are considered event-specific or specific to the transgenic protein expressed in 5307 maize, it is noted. If the record does not contain enough information to determine if the protein being evaluated is a closely related variant then, it will be included.

**TABLE 2 Eligibility/inclusion Criteria to Establish Relevance**

Concepts	Criteria	Comment
Intervention/exposure	5307 maize, derived food/feed products, and/or the intended or closely related trait(s)	Intended traits include coleopteran pest resistance and mannose metabolism. Closely related variants of eCry3.1Ab (i.e., those that share the same tertiary level of Crickmore nomenclature) will be included as relevant. Any records on enzymes classified as PMI will be considered relevant.
Information/data requirements	Data inform one or more information/data requirement(s) for the GMO and derived food/feed products under consideration, including the intended trait(s)	Publications that potentially contribute to the knowledge informing the risk assessment of 5307 maize (information/data requirements provided in Table 3) will be considered relevant. Publications addressing issues such as benefits, socio-economics, ethics, crop protection, detection methods, efficacy, public perception, and risk communication will be excluded using this criterion, as they are not relevant to the risk assessment as defined in this document.
Scope of GMO application	The pathways and level of exposure to the GMO, derived food/feed products, and the intended trait(s) addressed in the publication are relevant for the intended uses of the GMO and derived food/feed products under regulatory review	Publications must address pathways and levels of exposure relevant to the scope of the application: import and processing of 5307 maize for food/feed uses.
Reporting format	Original/primary data are presented in the publication or it is a risk assessment from a relevant key organization (such as regulatory agencies and risk assessment bodies involved in the risk assessment of GMOs)	Records that do not present original/primary data (e.g., reviews, editorials, position papers) will be excluded. Risk assessments performed and reported by relevant key organizations will be included if they address 5307 maize, eCry3.1Ab, or closely related variants and PMI.
Previously risk assessed publications	As indicated by EFSA, a publication should be included if it has not been previously risk assessed by EFSA and/or its GMO Panel and is not cited/referenced in an EFSA/GMO Panel output	If a publication has previously been considered by EFSA it will be excluded. Any cited/referenced publications contained within documents produced by EFSA and/or its GMO Panel will be excluded.
Access	Full-text document is accessible	If potentially relevant full-text documents could not be obtained, then they will be listed in a table with a description of the (unsuccessful) methods that have been used to try to obtain a copy.

Concepts	Criteria	Comment
Population	Human and animal health, and/or the environment are addressed as general protection goals	All of the information/data requirements categories described in Table 3 are thought to inform the risk assessment related to human and animal health, and/or the environment. Therefore, if a publication meets the inclusion criteria described in this Table and is relevant to the information/data requirements in Table 3 it will be considered relevant.
Outcomes	Effects/impacts on human and animal health, and/or the environment are addressed	Publications that address 5307 maize need to address effects/impacts on entities of concern, and potential determinants of exposure that place these entities at risk in order to be relevant to the risk assessment of 5307 maize.
Comparator	If the publication is a comparative study that uses plant material as a test material, eligible publications must report a non-GM variety	Publications that address 5307 maize must also include a conventional counterpart as a comparator in those cases where comparative analysis is conducted and plant material is used as test material. Any uncertainties about the appropriateness of the comparator will be addressed in the assessment of the publication.
Plant species	The publication addresses the same plant species as the GMO under consideration, but could also address any plant species producing the eCry3.1Ab or PMIroteins.	This review question addresses the safe use of the intended traits(s) of 5307 maize. Therefore, GMOs that contain eCry3.1Ab or PMI or closely related variants, but are introduced into another plant species may be included. For certain types of data, the presence of the transgenic proteins in a different plant species will not impact the assessment of 5307 maize. Those types of data are identified as event specific in Table 3.
Target pest/organisms	Target pests/organisms addressed in the study are established in the EU	Records related to the intervention/exposure and target pests/organisms will be excluded because the scope of the application is import for food/feed uses and this would be relevant for cultivation applications only.
Reporting format	A study should only be presented once, but if it is presented in more than one publication, all publications should be listed and grouped.	Duplicate publications will be excluded at the initial screening stage. Only one copy of a study will be presented even if it is reported in different publications.

**TABLE 3 Overview of Main Categories of Information/Data Requirements**

Information/data requirement	Non-exhaustive list of specific information/data requirements
Molecular characterization of the genetic modification of the GMO	<ul style="list-style-type: none"> <li>• Information on the insert including: sequence, size, copy number, genetic element arrangement, deletions, location, sequence similarity searches, and analysis of open reading frames (5307 maize only)</li> <li>• Expression data of inserted/modified sequences (5307 maize only)</li> <li>• Genetic stability (5307 maize only)</li> <li>• Molecular and biochemical characterization of the protein(s) such as: primary structure, molecular weight, post-translational modifications (eCry3.1Ab or PMI as expressed in 5307 maize only)</li> <li>• Assessment of enzymatic activity including substrate specificity and reaction products with respect to safety and/or nutritional balance</li> <li>• Data on the equivalence between plant-produced and microbially-produced proteins (eCry3.1Ab or PMI from 5307 maize plants and a microbial source)</li> </ul>
Agronomic, phenotypic and compositional characterization of the GM plant	<ul style="list-style-type: none"> <li>• Comparative assessment of agronomic and phenotypic characteristics under field or controlled conditions (5307 maize only)</li> <li>• Comparative analysis of key nutritional constituents (5307 maize only)</li> </ul>
Toxicological assessment of newly expressed protein(s), new constituents other than proteins, and the whole GM food/feed	<ul style="list-style-type: none"> <li>• Amino acid sequence comparison between the newly expressed protein(s) (eCry3.1Ab or PMI as expressed in 5307 maize only) and toxic proteins</li> <li>• Stability of the protein(s) under relevant processing and storage conditions</li> <li>• Investigation of proteolytic susceptibility of the newly expressed proteins</li> <li>• Toxicity studies</li> <li>• Feeding studies that used plant material (5307 maize only)</li> </ul>
Allergenicity assessment of the newly expressed protein and the GM food/feed, and adjuvanticity	<ul style="list-style-type: none"> <li>• Amino acid sequence comparison between the newly expressed protein(s) and known allergens or celiac disease peptide sequences (eCry3.1Ab or PMI as expressed in 5307 maize only)</li> <li>• Serum screening</li> <li>• Pepsin susceptibility testing</li> <li>• <i>In vivo</i> tests in animal models</li> <li>• Expression data for endogenous allergens in maize (5307 maize only)</li> <li>• Comparison of newly expressed proteins to known strong adjuvants</li> </ul>
Nutritional assessment of the newly expressed protein(s), other new constituents, as well as potential alterations in the total diet of the consumer or the animal	<ul style="list-style-type: none"> <li>• Anticipated dietary intake of food/feed from 5307 maize and the resulting nutritional impact</li> <li>• Comparative growth performance studies with young rapidly growing animal species (5307 maize only if the diet contains transgenic plant material)</li> </ul>

Information/data requirement	Non-exhaustive list of specific information/data requirements
Post-market monitoring	<ul style="list-style-type: none"> <li>Description of mechanisms for determining actual changes to overall dietary intake patterns of the GM food, to what extent this has occurred and whether or not the product induces known (side) effects or unexpected side effects</li> <li>Information on the reliability, sensitivity and specificity of the post market monitoring</li> </ul>
Persistence and invasiveness assessment, including plant-to-plant gene transfer	<ul style="list-style-type: none"> <li>Measurements of volunteer occurrence and establishment (5307 maize only)</li> <li>Replacement capacity (i.e., # of plants present at specific observation time/# of plants present after initial sowing) (5307 maize only)</li> <li>Fitness of the GM plant expressing eCry3.1Ab or PMI in various environmental conditions – in the same or in different plant species may be considered relevant</li> </ul>
Assessment of plant to micro-organism gene transfer	<ul style="list-style-type: none"> <li>Homology searches at nucleotide level between the GM event and microorganisms. (5307 maize only)</li> </ul>
Assessment of interactions with target organisms	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. The scope of this application covers the import, processing and food and feed use of 5307 maize in the EU. According to the EFSA ERA Guidance (EFSA 2010): “...resistance development is only relevant for applications with scope cultivation of GM plants and not for applications restricted to import and processing of GM plants and their products” (EFSA 2010). Therefore, an assessment of the potential resistance development in target organisms resulting from the import, processing and food and feed use, 5307 maize is not relevant for this application.</li> </ul>
Assessment of interactions with nontarget organisms (NTO)	<ul style="list-style-type: none"> <li>The EFSA ERA Guidance (EFSA 2010) states that: “In cases where the application does not include cultivation in the EU, direct environmental exposure of NTOs to the GM plant is via accidental release into the environment of seeds or propagules during transportation and processing. This may result in sporadic occurrence of feral plants and therefore exposure of NTO populations is likely to be negligible. The ERA will then focus on indirect exposure to products of the GM plant (e.g., through manure and faeces from animals fed the GM plant, and other by-products of industrial processes)...”. Therefore, any publications that discuss direct exposure in test protein(s) and laboratory studies or field survey data can be considered not relevant based on scope of application.</li> </ul>
Assessment of interactions with biogeochemical and abiotic processes	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. The scope of this application covers the import, processing and food and feed use of 5307 maize in the EU. According to the EFSA ERA Guidance (EFSA 2010): “applications concerning food/feed uses and import and processing do not require scientific information on possible environmental effects associated with the cultivation of the plant” therefore, an assessment of the impacts of 5307 maize on biogeochemical processes resulting from specific cultivation, management and harvesting techniques is not relevant given the scope of this application.</li> </ul>

Information/data requirement	Non-exhaustive list of specific information/data requirements
Assessment of impact of specific cultivation, management, and harvesting techniques	<ul style="list-style-type: none"><li>Excluded based on the scope of the application. The scope of this application covers the import, processing, and food and feed use of 5307 maize in the EU. Cultivation of 5307 maize in the EU is not included in the scope. According to the EFSA ERA guidance (EFSA 2010): “...for GM plants for import and processing that are not intended for cultivation in the EU, there is no need for an ERA for altered cultivation, management and harvesting techniques”. Therefore, an assessment of impact of specific cultivation, management and harvesting techniques of 5307 maize is not relevant for this application.</li></ul>
Risk mitigation	<ul style="list-style-type: none"><li>Excluded based on the scope of the application. Risk mitigation measures such as high dose/refuge strategy, isolation distance from protected habitats hosting species of conservation concern that are at risk, integrated pest/weed management are only relevant to cultivation. The scope of this application covers the import, processing, and food and feed use of 5307 maize.</li></ul>
Post-market environmental monitoring	<ul style="list-style-type: none"><li>Excluded based on the scope of the application. Monitoring such as insect resistance is relevant only to cultivation. The scope of this application covers the import, processing, and food and feed use of 5307 maize.</li></ul>

### 3.0 SEARCHING FOR/IDENTIFYING RELEVANT PUBLICATIONS

#### 3.1 Electronic Bibliographic Databases

To search for different types of publications and unpublished work that could provide information on the review question, multidisciplinary citation databases which include grey literature (i.e., not peer reviewed) was used. A total of four public databases including MEDical Literature Analysis and Retrieval System Online (Medline), Agricola, Commonwealth Agricultural Bureaux (CAB) Abstracts, and BIOSIS Previews® were searched via Ovid search interface (provided by Ovid Technologies). Each of the databases has a thesaurus. These databases were selected based on their coverage of scientific literature for relevant subjects including, but not limited to, biomedicine, plant diseases, agriculture, life sciences, pesticides, human health and nutrition, animal health, plant science, biotechnology, and environmental studies. The document types in these databases include journal articles, technical letters and notes, conference proceedings, book chapters, reports, and articles in press.

Due to the use of multiple (i.e., 4) multi-disciplinary databases and redundancy in coverage it is unlikely that late edition of a publication would be missed.

#### 3.2 Internet Searches

##### 3.2.1 Key organizations

The internet pages of regulatory agencies and risk assessment bodies that are involved in the risk assessment of GMOs and post their risk assessments on their websites (Table 4) were searched for documents related to 5307 maize.

**TABLE 4 Key Organization Pages Included in the Search**

Regulatory agency/risk assessment body	Web address
Food Standards Australia New Zealand	<a href="http://www.foodstandards.gov.au/consumer/gmfood/applications/Pages/default.aspx">http://www.foodstandards.gov.au/consumer/gmfood/applications/Pages/default.aspx</a>

US Food and Drug Administration	<a href="https://www.accessdata.fda.gov/scripts/fdcc/?set=Biocon">https://www.accessdata.fda.gov/scripts/fdcc/?set=Biocon</a>

<sup>a</sup>Also searches Environment and Climate Change Canada (<https://www.canada.ca/en/environment-climate-change.html>) and Canadian Food Inspection Agency (<http://www.inspection.gc.ca/plants/plants-with-novel-traits/notices-of-submission/eng/1300143491851/1300143550790>).

<sup>b</sup>Reports that reflect individual reviewer opinions are excluded from evaluation since they are considered when developing the official final opinion of the agency.

Note: Regulatory agencies in Mexico (Intersecretarial Commission on Biosafety of GMOs) and Argentina (National Advisory Commission on Agriculture Biotechnology) do not post the relevant document types on their respective agency websites, and were not searched.

### **3.2.2 Web-based Search Engines and Databases**

General search engines such as GOOGLE Scholar and web-based databases known to contain information specifically on effects of GMOs were not searched. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

### **3.2.3 Manual Searches**

#### **3.2.3.1 Checking Reference Lists**

Reviews of methodological publications, guidelines, and scientific opinions from regulatory agencies were retrieved using the search strategy and no documents were classified as relevant to the review question.

#### **3.2.3.2 Hand Searching**

Hand searching was not conducted. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

#### **3.2.3.3 Citation Searching**

Citation searching was not conducted. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

## **3.3 Constructing the Search Strategy**

### **3.3.1 Database Searching**

#### **3.3.1.1 Approaches to Develop Searches**

The “lumping” approach was utilized. A single search strategy was developed to capture all categories of information of interest in one search. This strategy was used because previous experience indicated that a manageable number of studies was returned.

#### **3.3.1.2 Search Terms**

##### **Identifying search terms**

Search terms were identified by:

- Assessing subject indexing terms of relevant publications recorded in those electronic bibliographic databases that use thesauri
  - All publications returned from literature search reports that aim to comply with the EFSA explanatory note and deemed relevant to the review questions were examined to determine the subject indexing terms associated with it.
- Seeking suggestions from experts and stakeholders
  - The search terms were developed using a multi-disciplinary team (i.e., risk assessors, information specialists, regulatory affairs managers).

### **Free-text terms and subject indexing terms**

The searches with the Ovid platform utilized the keyword search in the advanced search window. The keyword search uses a default set of fields designated .mp, which vary by database. Therefore, Ovid uses the term “keyword” to indicate that it is executing a multi-field search. In each database the specific fields searched are a different combination of free-text and controlled vocabulary fields, with Ovid switching automatically to the appropriate fields when a database is selected.<sup>1</sup>

In Ovid, the fields used in the .mp keyword search are word searchable, therefore any search only has to find a single word in a controlled vocabulary field that contains phrases to return as search results all references indexed to that subject heading. Thus, a search strategy which includes “genetic\*” will return the following (highlighted below):

- **Genetically modified** foods or **genetic engineering** in the Subject Headings field in Agricola,
- **Zea mays: species, maize, common, genetically modified, strain-Bt10 [Gramineae]** in the Organism field in BIOSIS Previews,
- **Genetically engineered organisms** in the Subject Headings field in CAB Abstracts,
- **Plants, Genetically Modified / ge [Genetics]** or **Genetic Engineering** in MeSH Subject Headings in Medline

<sup>1</sup>In Agricola the .mp fields are: free-text—abstract; geographic area; identifier; meeting information; map information; note; original title; personal name as subject; title—and controlled vocabulary—category code; subject heading.

In BIOSIS Previews the .mp fields are: free-text—abstract; book title; gene name; miscellaneous descriptors; methods & equipment; original language book title; title—and controlled vocabulary—biosystematic codes; chemicals & biochemicals; concept codes; diseases; geopolitical locations; major concepts; organisms; parts, structure & systems of organisms; sequence data; super taxa; taxa notes; time.

In CAB Abstracts the .mp fields are: free-text—abstract; identifiers; original title; title—and controlled vocabulary—broad terms; geographic location; organism descriptors; subject headings.

In Medline the .mp fields are: free-text—abstract; keyword heading word; original title; synonyms; title; unique identifier—and controlled vocabulary—floating sub-heading word; name of substance word; organism supplementary concept word; protocol supplementary concept word; rare disease supplementary concept word; subject heading word.

Subsequent combining of terms, (genetic\* AND (modif\* OR engineer\*)) (in bold), yields all references with these headings to be in the final results for that search set. Therefore, it was not necessary to search each exact controlled phrase in order to return all references for each of the specific headings.

Appendix A provides 1) the search history (including the full strategy used and fields searched as run in the database) and the number of publications identified (line by line) for each bibliographic database prior to de-duplication, and 2) the subject indexing used by each database as shown within the brackets after each search term.

### **3.3.1.3 Free-text Searching Functions**

The search terms were selected to incorporate a wide variety of synonymous and related terms. Truncation and wildcards were used where appropriate to capture different conventions in spelling and variation in the endings of terms.

### **3.3.1.4 Search Strings**

Search strings were combined with Boolean and proximity operators appropriate for the scope of the review.

### **3.3.1.5 Key Elements of Review Questions to Use for Best Results**

A very large number of publications were returned using only the four key elements of Event, Intended trait, newly expressed protein(s), and Trade Name. To prevent a very large number of publications from being returned while still achieving sensitivity, additional key elements were added to the search strategy. Sensitivity was defined as the ability to return the previously deemed relevant articles with the new search string. ‘A very large number’ is not defined in the Explanatory Note (EFSA 2019); however, the number returned with other search strategies (e.g., (Event OR Intended Trait OR Newly Expressed Protein(s) OR Trade Name) or (Event OR Trade name OR ((Intended Trait OR Newly Expressed Protein(s)) AND (Plant Species or GMO)))) was so large that it could not be de-duplicated by the search platform.

Therefore, the search structure included the following search concepts/key elements; Event, Trade Name, Newly Expressed Protein(s), or Intended Trait in the same publications as terms describing plant species and/or GMO general terms. The search strategy employed was:

- Event OR Trade name OR (Newly expressed proteins AND (GMO general OR plant species)) OR (Intended trait - insecticidal AND (GMO general AND Plant species)) OR GMO general x intended traits

The search strategy employed captured literature relevant to 5307 maize (Table 5). The same search string was used in all databases. Since the Ovid search platform simultaneously searches free-text and subject headings there is no disadvantage to using all search terms in all databases. For example, if ‘Genetically engineered organisms’ is a subject heading in CAB Abstracts but not in Agricola including this term in the search of the Agricola databases still allows for free-text searching of this term.

**TABLE 5 Search String Strategy**

Set	Field	Search string	Concepts/Key elements
1	Topic	5307 OR "SYN-25377-1"	Single Event 5307
2	Topic	Duracade*	Trade name for 5307
3		#1 OR #2	Event OR Trade name
4	Topic	"eCry3.1AB" OR "e-Cry3.1AB" OR eCry3 1AB OR e-Cry3 1AB OR "eCry3.1 AB" OR "e-Cry3.1" AB OR eCry3 1 AB OR e-Cry3 1 AB OR "eCry 3.1AB" OR "e-Cry 3.1AB" OR eCry 3 1AB OR e-Cry 3 1AB OR "eCry 3.1" AB OR "e-Cry 3.1 AB" OR eCry 3 1 AB OR e-Cry 3 1 AB	Newly expressed protein in 5307 (Insecticidal)
5	Topic	Phosphomannoisomerase OR Mannose 6-phosphate isomerase OR Phosphomannoseisomerase OR Phosphomannose isomerase OR 9023-88-5 OR AAA24109 OR "EC 5.3.1.8" OR "E.C. 5.3.1.8"	Newly expressed protein in 5307
6		#4 OR #5	Newly expressed proteins
7	Topic	((Insect OR insects OR coleoptera* OR pest OR pests OR rootworm* OR root worm* OR Diabrotica OR D virgifera OR D barberi OR MCR OR MCRW OR NCRW OR WCRW OR WCR) ADJ2 (toleran* OR resistan* OR protect* OR control*)) OR Bacillus thuringiensis OR B thuringiensis	Intended traits - insecticidal
8	Topic	GMO* OR LMO* OR GM OR GE OR transgen* OR ((genetic* OR living OR biotech*) ADJ3 (modif* OR transform* OR manipul* OR improv* OR engineer* OR deriv*))	GMO general
9	Topic	Maize* OR corn* OR Zea mays OR Z mays	Plant species
10	Topic	((Bt OR Bacillus thuringiensis OR B thuringiensis) ADJ5 (maize* OR corn* OR mays)) OR Btmaize* OR Btcorn*	GMO general x intended traits
11		#6 AND (#8 OR #9)	Newly expressed proteins AND (GMO general OR plant species)
12		#7 AND (#8 AND #9)	Intended trait - insecticidal AND (GMO general AND Plant species)
13		#3 OR #11 OR #12 OR #10	Event OR Trade name OR (Newly expressed proteins AND (GMO general OR plant species)) OR (Intended trait - insecticidal AND (GMO general AND Plant species)) OR GMO general x intended traits

### 3.3.1.6 Use of Multiple Languages

The search terms used were in the English language or utilized the Roman alphabet. For the event name and trade names that do not use words in the English language, translations are unlikely to exist.

### 3.3.1.7 Time Period

Due to the use of multiple (i.e., 4) multi-disciplinary databases and redundancy in coverage, it is unlikely that late edition of a publication would be missed. Therefore, the returned literature was limited to that which was published between June 1, 2020 and the date of the last database update prior to the search. Searches were executed on or after July 1, 2021.

Internet websites were searched, and the results were manually excluded if the records were dated outside the period of June 1, 2020 and the date the search was conducted. Searches were executed on or after July 1, 2021. If a date was undetermined on an internet website or result record, the result(s) was reviewed using the criteria in Tables 2 and 3.

### 3.3.1.8 Internet Searching of Regulatory Agency Webpages

The search terms selected are the event and protein names from the International Service for the Acquisition of Agri-Biotech Applications (ISAAA) (Table 6). The descriptions and information for the top 50 hits or 10% of the total hits (whichever is greater) for each search term/web page was collected.

Internet websites were searched and the results were manually excluded if the records were dated outside the period of June 1, 2020 until July 1, 2021. If a date was undetermined on an internet website or result record, the results were reviewed using the criteria in Tables 2 and 3.

**TABLE 6 Nomenclature For the Single Event and Newly Expressed Proteins from the ISAAA Database for use in Searching Regulatory Agency Web Pages**

Event	Search term	Concepts/Key elements
5307	5307	Event name
5307	eCry3.1Ab	Newly expressed protein
5307	Phosphomannose isomerase	Newly expressed protein

## 3.4 Reference Publications

The search strategy is the same as the one that was previously validated with reference publications ( ).

## 4.0 SUMMARIZING AND REPORTING THE DATA

### 4.1 Selecting Publications

#### 4.1.1 Database Records

The process for selecting relevant publications is conducted in two stages. The first stage, Stage 1 requires a preliminary assessment of titles and abstracts. Those records that are clearly not relevant from reviewing the title only are excluded from further review. For those records that appear relevant or have unclear relevance, the abstracts are reviewed. A kappa test is performed after the Stage 1 review and before any discussion of abstracts over which there was

disagreement by the reviewers. Those records that are clearly not relevant from reviewing the abstract are excluded from further review, while records that are relevant or have unclear relevance are reviewed in Stage 2.

Full-length articles are reviewed in Stage 2. An explanation of exclusion is provided for any full-length records that are deemed not relevant in Stage 2. Any relevant records identified in Stage 2 are subjected to reliability assessment and evaluation of the implications of the record on the food and feed, or environmental risk assessments.

Two independent reviewers examined the records for inclusion/exclusion for each eligible information/data requirement at all stages of review. During the preliminary assessment process (Stage 1), only records that were deemed clearly not relevant by all reviewers were excluded from further review. This conservative approach ensured that all potentially relevant records were evaluated until they were deemed to be either relevant or clearly not relevant in Stage 2. Following the Stage 1 reviews, reviewers scored the records as either 1) relevant or unclear relevance, 2) clearly not relevant.

#### **4.1.2 Internet Records from Key Organizations**

The records returned from searching the websites of key organizations were considered relevant if they were risk assessments, scientific opinions/reports concerning the commercial release of GMO being examined or documents on the biology of the crop of interest sponsored by the key organization. The regulatory agency webpages that were searched do not post primary data; therefore, all other document types were not considered relevant. The eligibility/inclusion criteria do not include risk assessments/dossiers submitted to regulatory authorities, only risk assessments performed and reported by relevant key organizations. Documents must have been authored by the key organizations and not the applicants to qualify as relevant.

The format of records returned from regulatory agency websites does not often meet those (i.e., title and abstract is not often provided) required to assess them using the 2-stage process followed for the database records. Those websites at which the records are published in English were assessed by two independent reviewers. Due to their format, internet full-text documents were assessed to determine their relevance in stage 2 only. For those websites where the records are not published in English, the results were translated into English and two independent reviewers determined if it met the criteria for inclusion.

The rationale for exclusion was provided only when records were classified as one of the relevant document types and were authored by the agency and excluded based on other eligibility criteria.

The following process applied to the types of internet agency documents described below. We defined a unique internet record, for the purpose of reporting the statistics, as a unique URL. Documents clearly labeled as draft or with a line for a signature that is blank were not reviewed and were classified as not relevant. If the URLs for two documents were identical except for file format (e.g., pdf versus .doc or .docx), one of the documents was considered a duplicate document and it was excluded from statistical accounting. For the group of relevant

records, it was confirmed that there were no duplicate records in that group by visual examination.

## **4.2 Results of the Publication Selection Process**

For electronic bibliographic databases, the date on which the search was conducted, the date of the most recent update of the database, the service provider used, date span of the search, any limits applied to the search (e.g., study types, dates, languages) and the total number of records retrieved across all databases was recorded (Table 7). The records were de-duplicated after combining records retrieved from all the databases. Additionally, the line-by-line strategy with the number of publications identified per line was presented in the final report. See Appendix A.

For records from websites, the following were recorded (if available): the website name and service publisher used, justification for choosing the source, the URL, the date on which the search was conducted, the date of the most recent website update at the time it was searched, the date span of the search, the search terms used, any limits to the search, and the number of relevant records retrieved (Table 8). The results of the selection process from both database and internet searches are recorded in Table 9.

Of the 220 records reviewed from the databases at Stage 1, both the reviewers agreed to exclude 219 records. This yielded a kappa test score of 0. Because of the format of documents retrieved from internet searching of key organizations (i.e., title and abstract is not often provided) the kappa test was conducted only on the output of the database search. For the remaining 1 record reviewed from the databases at Stage 2, both the reviewers agreed on the record to be relevant (Table 10) and no record was excluded (Table 11). The information obtained from these records does not change the risk assessment for 5307 maize.

Of the 77 records reviewed from the internet search at Stage 2, both the reviewers agreed to exclude all of the 77 records (Table 14). No internet records were found to be relevant (Table 13).

## **4.3 Relevant Publications**

There was 1 relevant full-text document retrieved from the database search. A list of the full bibliographic references for all relevant publications (if any), ordered by category of information/data requirement is recorded in Tables 10 and 13.

## **4.4 Excluded Publications After Detailed Assessment of Full-Text Documents**

A list of references for all excluded studies (if any) retrieved from database and internet searching after detailed assessment of full-text documents for relevance (i.e. stage 2), with justification for their exclusion, is recorded in Tables 11 and 14.

## **4.5 Unobtainable Publications**

No publications were considered unobtainable.

#### **4.6 Unclear Publications**

No publications were considered unclear.

#### **4.7 Full-Text Documents**

Full text documents for all relevant publications were compiled using a reference management software (.RIS format) and accompany this final report.

#### **4.8 Implications of Relevant Publications on Risk Assessment**

The implications of the relevant publications on the risk assessment was assessed by considering whether the record presents new hazards, modified exposure pathways or new scientific uncertainties.

The information obtained from the relevant records does not change the risk assessment for 5307 maize. Therefore, the literature search results, and review support the existing safety assessment of the 5307 maize.

The record reliability and its implication on the risk assessment was recorded in Tables 12 and 15.

**TABLE 7      Electronic Bibliographic Database Search Results**

Database	Search Date dd/mm/yyyy	Service provider	Date span of the search dd/mm/yyyy <sup>a</sup>	Any limits applied to the search	Number of records retrieved <sup>b</sup>
Agricola	09/07/2021	Ovid Technologies	01/06/2020– 01/07/2021	Dates	64
BIOSIS Previews	09/07/2021	Ovid Technologies	01/06/2020– 01/07/2021	Dates	223
CAB Abstracts	09/07/2021	Ovid Technologies	01/06/2020– 01/07/2021	Dates	135
Medline	09/07/2021	Ovid Technologies	01/06/2020– 01/07/2021	Dates	172
Total					594

<sup>a</sup>Ovid only allows results to be limited by year. The frequency of database update varies. Ovid has provided us with the following update information: Agricola updated monthly on the 1<sup>st</sup> of the month, BIOSIS Previews updated weekly on Mondays, CAB Abstracts updated weekly on Mondays and Medline updated daily.

<sup>b</sup> The results were de-duplicated after combining records retrieved from all the databases.

**TABLE 8 Regulatory Agency Webpage Search Details**

Regulatory agency name	URL	Date of search dd/mm/yyyy	Date of most recent website update dd/mm/yyyy	Date span of search <sup>a</sup>	Total number of records retrieved after removing duplicates	Number of relevant records

<sup>a</sup> Both from electronic bibliographic databases and other sources of scientific literature.

<sup>b</sup> A total of 594 publications were identified for the database search, of them 374 publications were duplicates and were removed.

<sup>c</sup> Internet results are not screened at stage 1 because they have no title or abstract.

NA=Not Applicable.

**TABLE 10      Report of all Relevant Publications Retrieved After Detailed Assessment of Full-text Database Documents for Relevance**

List of bibliographic references for all relevant publications, classified by category of information/data requirements			
Category of information/data requirement(s)	Study (Author(s) and year)	Title	Source
Allergenicity assessment of the newly expressed protein and the GM food/feed, and adjuvanticity	Herman <i>et. al.</i> 2021	History of safe exposure and bioinformatic assessment of phosphomannose-isomerase (PMI) for allergenic risk	Transgenic Research

**TABLE 11      Report of all the Publications Excluded from the Risk Assessment After Detailed Assessment of Full-text Database Documents**

List of bibliographic references for all publications excluded from the risk assessment, classified by authors			
Study author(s) and year	Title	Source	Reason(s) for exclusion based on eligibility/inclusion criteria table
No publications in this category			

**TABLE 12      Report of the Reliability and Implications for the Risk Assessment of all Relevant Publications Retrieved after Detailed Assessment of Full-text Database Documents**

List of bibliographic references for all relevant publications, classified by category of information/data requirements			
Category of information/data requirement(s)	Study (Author(s) and year)	Summary of reliability appraisal	Implications for the risk assessment
Allergenicity assessment of the newly expressed protein and the GM food/feed, and adjuvanticity	Herman <i>et. al.</i> 2021	Not assignable because this document is an assessment and not an original study	This document is a risk assessment. Risk assessment describes bioinformatics analyses identified an eight-amino acid contiguous match between PMI and a frog parvalbumin allergen (CAC83047.1). Short amino acid matches have been shown to be a poor predictor of allergen cross-reactivity. The match was shown to be of negligible risk of causing cross-reactivity with known allergens and confirmed past results for the PMI sequence. Also, PMI has been expressed in commercialized genetically engineered crops since 2010 with no known reports of allergy. Therefore, the information does not change the conclusion of the risk assessment of 5307 maize.
