## 1.0 EXECUTIVE SUMMARY

Syngenta has developed Bt11 x 59122 x MIR604 x TC1507 x GA21 maize (*Zea mays* L., corn) by combining five individual transformation events using conventional breeding.

A systematic literature search and scoping review for the Bt11 x 59122 x MIR604 x 1507 x GA21 stack maize and all sub-combinations in scope was conducted following the requirements of the European Food Safety Authority (EFSA) technical note on literature searching to GMO risk assessment guidance in the context of an annual post-market environmental monitoring (PMEM) report on GMOs (EFSA 2019).

A broad literature search was performed using a pre-defined comprehensive search strategy over a collection of bibliographic databases, covering a database entry period from June 01, 2020 to July 01, 2021. A total of four public databases based on their coverage of scientific literature were searched via Ovid search interface. The records were de-duplicated after combining records retrieved from all the databases to generate unique references. Similarly, the internet pages of regulatory agencies and risk assessment bodies that are involved in the risk assessment of stacks and post their risk assessments on their websites were searched.

This literature search identified a total of 190 records from database search, of which all 190 records were excluded and no subsequent steps of reviews were carried out. Similarly, the literature search identified a total of 22 full-text records from the internet search, of which all 22 records were excluded.

Therefore, the literature search results, and review support the existing safety assessment of the Bt11 x 59122 x MIR604 x 1507 x GA21 stack maize and all sub-combinations in scope.

## 2.0 METHODS

### 2.1 Objective of the Scoping Review

The objective of this systematic literature search and scoping review was to search scientific publications in order to collect, identify, and assess evidence that is relevant to the risk assessment of Bt11 x 59122 x MIR604 x 1507 x GA21 stack maize and all sub-combinations in scope in the context of an annual post-market environmental monitoring (PMEM) report on GMOs authorized in the EU market.

Syngenta has developed Bt11 x 59122 x MIR604 x TC1507 x GA21 maize (*Zea mays* L., corn) by combining five individual transformation events using conventional breeding.

Maize plants derived from transformation Event Bt11 contain the transgene *cry1Ab*, which encodes the insecticidal protein Cry1Ab, and the transgene *pat*, which encodes the enzyme phosphinothricin acetyltransferase (PAT). The native, full-length Cry1Ab produced by the soil bacterium *Bacillus thuringiensis* subsp. *kurstaki* is active against certain lepidopteran insect pests of maize, including *Ostrinia nubilalis* and *Sesamia nonagrioides*. The Cry1Ab produced by Bt11 maize is a truncated version of native Cry1Ab that retains activity against

lepidopterans. The transgene *pat* was derived from the soil bacterium *Streptomyces viridochromogenes*. PAT acetylates glufosinate-ammonium, thus inactivating it and conferring tolerance to glufosinate-ammonium in herbicide products. PAT was used as a selectable marker in the development of Bt11 maize.

Maize event 59122 (DAS-59122-7) was developed using *Agrobacterium*-mediated transformation to insert a DNA fragment from plasmid PHP17662 into the maize genome. DAS-59122-7 expresses the *B. thuringiensis* strain PS149B1's Cry34Ab1 and Cry35Ab1 (Cry34/35Ab1) binary insecticidal proteins which are active against Corn Rootworm (*Diabrotica* spp). DAS-59122-7 also produces the PAT protein from *Streptomyces viridochromogenes* which provides tolerance to glufosinate herbicides.

Maize plants derived from Event MIR604 provide control of certain coleopteran insect pests. Event MIR604 maize plants contain the transgene *mcry3A*, which encodes the insecticidal protein mCry3A, and the transgene *pmi*, which encodes the enzyme PMI. The native Cry3A from the soil bacterium *B. thuringiensis* subsp. *tenebrionis* is active against certain coleopteran pests of maize. The mCry3A produced by MIR604 was modified to have enhanced activity against the *Diabrotica virgifera virgifera* and other related coleopteran pests. PMI was used as a selectable marker in the development of MIR604 maize. PMI expressed in MIR604 maize differs from the *E.coli* PMI by two amino acids and has been designated MIR604 PMI.

Maize event 1507 (TC1507) was developed by insertion of a DNA fragment, PHI8999, into the maize genome using microprojectile bombardment. TC1507 expresses the *B. thuringiensis* var. *aizawai* Cry1F insecticidal protein, which confers protection against certain lepidopteran pests such as European Corn borer (*Ostrinia nubilalis*) and *Sesamia* spp. TC1507 also produces the PAT protein from *Streptomyces viridochromogenes* which provides tolerance to glufosinate herbicides.

Maize plants derived from transformation Event GA21 contain the transgene *mepsps*, which encodes the enzyme double-mutated 5-enol pyruvylshikimate-3-phosphate synthase (mEPSPS). The native 5-enol pyruvylshikimate-3-phosphate synthase (EPSPS) from *Z. mays* is involved in synthesis of aromatic amino acids and is inhibited by glyphosate. The double-mutated mEPSPS produced by GA21 maize has low affinity for glyphosate compared to the native EPSPS, thus conferring tolerance to glyphosate in herbicide products.

## 2.2 Formulating Review Questions and Clarifying Their Purpose

### 2.2.1 Review Question

The review question associated with this literature search was:

Do either food/feed products derived from Bt11 × 59122 × MIR604 × 1507 × GA21 maize including all sub-combinations in scope or the combined intended traits have adverse effects on human and animal health, and/or the environment?

This review question followed the PICO/PECO structure with key elements “Population, Intervention/Exposure, Comparator, Outcomes” (Table 1).

**TABLE 1            Review Question in PICO/PECO Structure**

<b>Element</b>	<b>Components of review question</b>
<u>P</u> opulation	human and animal health and the environment
<u>I</u> ntervention/ <u>E</u> xposure	Bt11 × 59122 × MIR604 × 1507 × GA21 maize and all sub-combinations in scope, derived food/feed products, and/or relevant combinations of Cry1Ab, phosphinothricin acetyltransferase (PAT), Cry34Ab1, Cry35Ab1, mCry3A, phosphomannose isomerase (MIR604 PMI), Cry1F and mEPSPS and closely related variants
<u>C</u> omparator	conventional counterpart (if applicable)
<u>O</u> utcome	adverse effects

Because the search approach was not exclusionary (i.e., did not exclude the presence of any other events in retrieved records) searching the name of any of the single events comprising the Bt11 × 59122 × MIR604 × 1507 × GA21 maize stack has the possibility to return literature relevant to the stack of interest and all sub-combinations. A binary search term approach was developed to return literature on those titles related to all the possible stack combinations of this application. A similar approach was used for the proteins associated with the events. The sub-combinations relevant to Bt11 × 59122 × MIR604 × 1507 × GA21 maize EU market authorization are listed in Table 2.

### **2.2.2 Eligibility/Inclusion Criteria**

High level key concepts for inclusion/exclusion criteria intended to establish relevance of retrieved records are provided in the order of importance or ease of finding information on the criteria within a publication (Table 3). The first failed eligibility/inclusion criterion was used as the primary reason for exclusion, and the remaining criteria were not assessed.

**TABLE 3 Eligibility/inclusion Criteria to Establish Relevance**

Concepts	Criteria	Comment
Stacked events obtained by conventional crosses/sub-combinations	A publication is included when it addresses the highest order breeding stack and/or a sub-combination or sub-combinations of the single events of the highest order breeding stack, independently of its/their origin.	This permits the selection of publications on the higher order breeding stack and/or sub-combinations of the single events of the higher order stack that are in scope of the Bt11 × 59122 × MIR604 × 1507 × GA21 application, independently of their origin. This permits the exclusion of publications only on the single events of the higher stacked event, because the risk assessment of GMO applications for stacks covers only products in the scope of the GMO application – i.e., the higher order stack and sub-combinations of the singles involved, independently of their origin.
Intervention/exposure	Bt11 × 59122 × MIR604 × 1507 × GA21 maize and all sub-combinations in scope, derived food/feed products, and/or the intended trait(s)	Intended traits include glufosinate herbicide tolerance, glyphosate herbicide tolerance, coleopteran insect resistance, lepidopteran insect resistance, and mannose metabolism. Closely related variants of the insecticidal proteins included as relevant were those that shared the same tertiary level of Crickmore nomenclature for Cry1Ab, Cry3Ab, and Cry35Ab; and those that shared the same secondary level of Crickmore nomenclature for mCry3A and Cry1F. Any enzyme classified as a 5-enol pyruvylshikimate-3-phosphate synthase was considered relevant if the EPSPS protein imparts the glyphosate tolerance trait. Any enzyme classified as a phosphinothricin acetyl transferase was considered relevant. Any enzyme classified as a phosphomannose isomerase was considered relevant. Only unique protein combinations relevant to the stack and its sub-combinations were in scope.
Information/data requirements	Data inform one or more information/data requirement(s) for the GMO and derived food/feed products under consideration, including the intended trait(s)	Publications that potentially contribute to the knowledge informing the risk assessment of Bt11 × 59122 × MIR604 × 1507 × GA21 maize (information/data requirements provided in Table 4) and all sub-combinations in scope were considered relevant. Based on the scope of the application certain information/data requirements were excluded. These are also detailed in Table 4. Publications addressing issues such as benefits, socioeconomics, ethics, crop protection, detection methods, efficacy, public perception and risk communication were excluded using this criterion, as they are not relevant to the risk assessment as defined in this document.
Scope of GMO application	The pathways and level of exposure to the GMO, derived food/feed products, and the intended trait(s) addressed in the publication	Publications must address pathways and levels of exposure relevant to the scope of the application: import and processing of Bt11 × 59122 ×

Concepts	Criteria	Comment
	are relevant for the intended uses of the GMO and derived food/feed products under regulatory review	MIR604 × 1507 × GA21 maize and all sub-combinations in scope for food/feed uses.
Reporting format	Original/primary data are presented in the publication or it is a risk assessment from a relevant key organization (such as regulatory agencies and risk assessment bodies involved in the risk assessment of GMOs)	Records that do not present original/primary data (e.g., editorials, reviews, position papers) were excluded. Risk assessments performed and reported by relevant key organizations were included as relevant if they address Bt11 × 59122 × MIR604 × 1507 × GA21 maize, any of the relevant sub-combinations, and unique combinations of Bt11, 59122, 1507, and GA21 events or Cry1Ab, PAT, Cry34Ab1, Cry35Ab1, Vip3Aa20, PMI, mCry3A, mEPSPS, Cry1F and closely related variants.
Previously risk assessed publications	As indicated by EFSA, a publication should be included if it has not been previously risk assessed by EFSA and/or its GMO Panel and is not cited/referenced in an EFSA/GMO Panel output	If a publication has previously been considered by EFSA it will be excluded. Any cited/referenced publications contained within documents produced by EFSA and/or its GMO Panel will be excluded.
Access	Full-text document is accessible	If potentially relevant full-text documents cannot be obtained, then they will be listed in a table with a description of the (unsuccessful) methods used to try to obtain a copy.
Population	Human and animal health, and/or the environment are addressed as general protection goals	All of the information/data requirements categories described in Table 4 are thought to inform the risk assessment related to human and animal health, and/or the environment. Therefore, if a publication meets the inclusion criteria described in this Table and meets the information/data requirements in Table 4 it will be considered relevant.
Outcomes	Effects/impacts on human and animal health, and/or the environment are addressed	Publications that address Bt11 × 59122 × MIR604 × 1507 × GA21 maize, or sub-combinations in scope also need to address effects/impacts on entities of concern, and potential determinants of exposure that place these entities at risk in order to be relevant to the risk assessment of Bt11 × 59122 × MIR604 × 1507 × GA21 maize, or sub-combinations in scope.
Comparator	If the publication is a comparative study that uses plant material as a test material, eligible publications must report a non-GM variety	Publications that address Bt11 × 59122 × MIR604 × 1507 × GA21 maize or sub-combinations in scope, must also include a conventional counterpart as a comparator in those cases where comparative analysis is conducted and plant material is used as test material. Any uncertainties about the appropriateness of the comparator was addressed in the assessment of the publication.

Concepts	Criteria	Comment
Plant species	The publication may address the same plant species as the GMO under consideration, but could also address any plant species producing unique combinations of Bt11, 59122, 1507, and GA21 events or Cry1Ab, PAT, Cry34Ab1, Cry35Ab1, Vip3Aa20, PMI, mCry3A, mEPSPS and Cry1F proteins in the stack or sub-combinations in scope of the application.	The review question addresses the safe use of the intended trait(s) of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and sub-combinations in scope. Therefore, GMOs that contain combinations of Bt11, 59122, 1507, and GA21 events or Cry1Ab, PAT, Cry34Ab1, Cry35Ab1, Vip3Aa20, PMI, mCry3A, mEPSPS and Cry1F or closely related variants unique to the product and sub-combinations in scope, but are introduced into another plant species may be included. For certain types of data, the presence of the transgenic proteins in a different plant species does not impact the assessment of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and sub-combinations in scope. Those types of data are identified as event specific in Table 4.
Target pest/organisms	Target pests/organisms addressed in the study are established in the EU	Records related to the intervention/exposure and target pests/organisms will be excluded because the scope of the application is import for food/feed uses and this concept would be relevant for cultivation applications only.
Reporting format	A study should only be presented once, but if it is presented in more than one publication, all publications should be listed and grouped.	Duplicate publications will be excluded at the initial screening stage. Only one copy of a study will be presented even if it is reported in different publications.

Expert knowledge on data used in the risk assessment of the GMO is required. Some examples of relevant data/information on the information/data requirements concept included in Table 3 are listed in Table 4. If certain data are considered stack/sub-combination specific or specific to the unique transgenic protein combinations expressed in Bt11 × 59122 × MIR604 × 1507 × GA21 maize and the sub-combinations in scope, it is noted. If the record did not contain enough information to determine if the protein being evaluated is a closely-related variant, then it was included.

Assessment of interactions with target organisms	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. The scope of this application covers the import, processing and food and feed use of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and any sub-combinations in scope in the EU. According to the EFSA ERA Guidance (EFSA, 2010): “<i>resistance development is only relevant for applications with scope cultivation of GM plants and not for applications restricted to import and processing of GM plants and their products</i>” (EFSA, 2010). Therefore, an assessment of the potential resistance development in target organisms resulting from the import, processing and food and feed use Bt11 × 59122 × MIR604 × 1507 × GA21 maize is not relevant for this application.</li> </ul>
Assessment of interactions with nontarget organisms	<ul style="list-style-type: none"> <li>The EFSA ERA Guidance (EFSA 2010) states that: “in cases where the application does not include cultivation in the EU, direct environmental exposure of NTOs to the GM plant is via accidental release into the environment of seeds or propagules during transportation and processing. This may result in sporadic occurrence of feral plants and therefore exposure of NTO populations is likely to be negligible. The ERA will then focus on indirect exposure to products of the GM plant (e.g., through manure and faeces from animals fed the GM plant, and other by-products of industrial processes)”. Therefore, any publications that discuss direct exposure in test protein and laboratory studies or field survey data was considered not relevant based on scope of application.</li> </ul>
Assessment of interactions with biogeochemical and abiotic processes	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. The scope of this application covers the import, processing and food and feed use of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and any sub-combinations in scope in the EU. According to the EFSA ERA Guidance (EFSA, 2010): “<i>applications concerning food/feed uses and import and processing do not require scientific information on possible environmental effects associated with the cultivation of the plant</i>” therefore, an assessment of the impacts of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and any sub-combinations in scope on biogeochemical processes resulting from specific cultivation, management and harvesting techniques is not relevant given the scope of this application.</li> </ul>
Assessment of impact of specific cultivation, management and harvesting techniques	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. The scope of this application covers the import, processing and food and feed use of Bt11 × 59122 × MIR604 × 1507 × GA21 maize in the EU. Cultivation of Bt11 × 59122 × MIR604 × 1507 × GA21 maize in the EU is not included in the scope. According to the EFSA ERA guidance (EFSA 2010): “<i>for GM plants for import and processing that are not intended for cultivation in the EU, there is no need for an ERA for altered cultivation, management and harvesting techniques</i>”. Therefore, an assessment of impact of specific cultivation, management and harvesting techniques of Bt11 × 59122 × MIR604 × 1507 × GA21 maize and any sub-combinations in scope is not relevant for this application.</li> </ul>
Risk mitigation	<ul style="list-style-type: none"> <li>Excluded based on the scope of the application. ### 3.0 SEARCHING FOR/IDENTIFYING RELEVANT PUBLICATIONS

#### 3.1 Electronic Bibliographic Databases

To search for different types of publications and unpublished work that could provide information on the review question, multidisciplinary citation databases which include grey literature (i.e., not peer reviewed) was used. A total of four public databases including MEDical Literature Analysis and Retrieval System Online (Medline), Agricola, Commonwealth Agricultural Bureaux (CAB) Abstracts, and BIOSIS Previews® were searched via Ovid search interface (provided by Ovid Technologies). Each of the databases has a thesaurus. These databases were selected based on their coverage of scientific literature for relevant subjects including, but not limited to, biomedicine, plant diseases, agriculture, life sciences, pesticides, human health and nutrition, animal health, plant science, biotechnology, and environmental studies. The document types in these databases include journal articles, technical letters and notes, conference proceedings, book chapters, reports, and articles in press.

Due to the use of multiple (i.e., 4) multi-disciplinary databases and redundancy in coverage it is unlikely that late edition of a publication would be missed.

#### 3.2 Internet Searches

##### 3.2.1 Key organizations

The internet pages of regulatory agencies and risk assessment bodies that are involved in the risk assessment of stacks and post their risk assessments on their websites (Table 5) were searched for documents related to Bt11 × 59122 × MIR604 × 1507 × GA21 maize.

**TABLE 5 Key Organization Pages Included in the Search**

<sup>b</sup>Reports that reflect individual reviewer opinions are excluded from evaluation because they are considered when developing the official final opinion of the agency.

Note: Regulatory agencies in Mexico (Intersecretarial Commission on Biosafety of GMOs) and Argentina (National Advisory Commission on Agriculture Biotechnology) do not post the relevant document types on their respective agency websites, and will not be searched.

### **3.2.2 Web-based Search Engines and Databases**

General search engines such as GOOGLE Scholar and web-based databases known to contain information specifically on effects of GMOs were not searched. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

### **3.2.3 Manual Searches**

#### **3.2.3.1 Checking Reference Lists**

Reviews of methodological publications, guidelines, and scientific opinions from regulatory agencies were retrieved using the search strategy and no documents were classified as relevant to the review question.

#### **3.2.3.2 Hand Searching**

Hand searching was not conducted. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

#### **3.2.3.3 Citation Searching**

Citation searching was not conducted. The search of the databases and key organization websites is considered to provide an adequately comprehensive search of literature.

## **3.3 Constructing the Search Strategy**

### **3.3.1 Database Searching**

#### **3.3.1.1 Approaches to Develop Searches**

The “lumping” approach was utilized. A single search strategy was developed to capture all categories of information of interest in one search. This strategy was used because previous experience indicated that a manageable number of studies was returned.

#### **3.3.1.2 Search Terms**

##### **Identifying search terms**

Search terms were identified by:

- Assessing subject indexing terms of relevant publications recorded in those electronic bibliographic databases that use thesauri
  - All publications returned from literature search reports that aim to comply with the EFSA explanatory note and deemed relevant to the review questions were examined to determine the subject indexing terms associated with it.
- Seeking suggestions from experts and stakeholders

- The search terms were developed using a multi-disciplinary team (i.e., risk assessors, information specialists, regulatory affairs managers).

### **Free-text terms and subject indexing terms**

The searches with the Ovid platform utilized the keyword search in the advanced search window. The keyword search uses a default set of fields designated .mp, which vary by database. Therefore, Ovid uses the term “keyword” to indicate that it is executing a multi-field search. In each database the specific fields searched are a different combination of free-text and controlled vocabulary fields, with Ovid switching automatically to the appropriate fields when a database is selected.<sup>1</sup>

In Ovid, the fields used in the .mp keyword search are word searchable, therefore any search only has to find a single word in a controlled vocabulary field that contains phrases to return as search results all references indexed to that subject heading. Thus, a search strategy which includes “genetic\*” will return the following (highlighted below):

- **Genetically modified** foods or **genetic engineering** in the Subject Headings field in Agricola,
- Zea mays: species, maize, common, **genetically modified**, strain-Bt10 [Gramineae] in the Organism field in BIOSIS Previews,
- **Genetically engineered** organisms in the Subject Headings field in CAB Abstracts,
- Plants, **Genetically Modified** / ge [Genetics] or **Genetic Engineering** in MeSH Subject Headings in Medline

Subsequent combining of terms, (genetic\* AND (modif\* OR engineer\*)) (in bold), yields all references with these headings to be in the final results for that search set. Therefore, it was not necessary to search each exact controlled phrase in order to return all references for each of the specific headings.

Appendix A provides 1) the search history (including the full strategy used and fields searched as run in the database) and the number of publications identified (line by line) for each bibliographic database prior to de-duplication, and 2) the subject indexing used by each database as shown within the brackets after each search term.

<sup>1</sup>In Agricola the .mp fields are: free-text—abstract; geographic area; identifier; meeting information; map information; note; original title; personal name as subject; title—and controlled vocabulary—category code; subject heading.

In BIOSIS Previews the .mp fields are: free-text—abstract; book title; gene name; miscellaneous descriptors; methods & equipment; original language book title; title—and controlled vocabulary—biosystematic codes; chemicals & biochemicals; concept codes; diseases; geopolitical locations; major concepts; organisms; parts, structure & systems of organisms; sequence data; super taxa; taxa notes; time.

In CAB Abstracts the .mp fields are: free-text—abstract; identifiers; original title; title—and controlled vocabulary—broad terms; geographic location; organism descriptors; subject headings.

In Medline the .mp fields are: free-text—abstract; keyword heading word; original title; synonyms; title; unique identifier—and controlled vocabulary—floating sub-heading word; name of substance word; organism supplementary concept word; protocol supplementary concept word; rare disease supplementary concept word; subject heading word.

3.3.1.3 Free-text Searching Functions

The search terms were selected to incorporate a wide variety of synonymous and related terms. Truncation and wildcards were used where appropriate to capture different conventions in spelling and variation in the endings of terms.

3.3.1.4 Search Strings

Search strings were combined with Boolean and proximity operators appropriate for the scope of the review.

3.3.1.5 Key Elements of Review Questions to Use for Best Results

A very large number of publications were returned using only the four key elements of Event, Intended trait, newly expressed protein(s), and Trade Name. To prevent a very large number of publications from being returned while still achieving sensitivity, additional key elements were added to the search strategy. Sensitivity was defined as the ability to return the previously deemed relevant articles with the new search string. ‘A very large number’ is not defined in the Explanatory Note (EFSA 2019); however, the number returned with other search strategies (e.g., (Event OR Intended Trait OR Newly Expressed Protein(s) OR Trade Name) or (Event OR Trade name OR ((Intended Trait OR Newly Expressed Protein(s)) AND (Plant Species or GMO)))) was so large that it could not be de-duplicated by the search platform.

Therefore, the search structure included the following search concepts/key elements; Event, Trade Name, Newly Expressed Protein(s), or Intended Trait in the same publications as terms describing plant species and/or GMO general terms. The search strategy employed was:

- Single event combinations OR Trade name OR Newly expressed protein combinations, OR (((Intended trait AND GMO general) OR GMO general × Intended trait) AND Plant species) OR GMO general × Intended trait - insecticidal

The search strategy employed captured literature relevant to Bt11 × 59122 × MIR604 × 1507 × GA21 maize (Table 6). The same search string was used in all databases. Since the Ovid search platform simultaneously searches free-text and subject headings there is no disadvantage to using all search terms in all databases. For example, if ‘Genetically engineered organisms’ is a subject heading in CAB Abstracts but not in Agricola including this term in the search of the Agricola databases still allows for free-text searching of this term.

<sup>a</sup>Trade names for all of the single events, the highest order stack and commercial sub-combinations all have Agrisure in their names. Therefore, by simply searching Agrisure it is possible to capture all relevant literature.

Various single event and sub-combinations within the scope of this literature review include:

- Bt11 × 59122 × MIR604 × 1507 × GA21 maize - Agrisure 3122, Agrisure 3122A, Agrisure 3122 E-Z Refuge, Agrisure Artesian 3122A E-Z Refuge, Agrisure 3122 Refuge Renew
- Bt11 × 1507 × GA21 maize - Agrisure 3120, Agrisure 3120A, Agrisure 3120 E-Z Refuge, Agrisure Artesian 3120A E-Z Refuge, Agrisure EZ-Refuge

- MIR604 maize - Agrisure RW
- GA21 maize - Agrisure GT, Agrisure TG, Agrisure Artesian GTA

Because the binary search strategy is not exclusionary it allowed for the possibility of returning records on all of the subcombinations in scope of the application without searching all of the subcombinations separately (see Table 7 for an example matrix for the event terms).

### 3.3.1.6 Use of Multiple Languages

The search terms used were in the English language or utilized the Roman alphabet. For the event name and trade names that do not use words in the English language, translations are unlikely to exist.

### 3.3.1.7 Time Period

Due to the use of multiple (i.e., 4) multi-disciplinary databases and redundancy in coverage, it is unlikely that late edition of a publication would be missed. Therefore, the returned literature was limited to that which was published between June 1, 2020 and the date of the last database update prior to the search. Searches were executed on or after July 1, 2021.

Internet websites were searched, and the results were manually excluded if the records were dated outside the period of June 1, 2020 and the date the search was conducted. Searches were executed on or after July 1, 2021. If a date was undetermined on an internet website or result record, the result(s) was reviewed using the criteria in Tables 3 and 4.

### 3.3.1.8 Internet Searching of Regulatory Agency Webpages

The search terms selected are the event and protein names from the International Service for the Acquisition of Agri-Biotech Applications (ISAAA) (Table 8). The descriptions and information for the top 50 hits or 10% of the total hits (whichever is greater) for each search term/web page was collected.

Internet websites were searched and the results were manually excluded if the records were dated outside the period of June 1, 2020 until July 1, 2021. If a date was undetermined on an internet website or result record, the results were reviewed using the criteria in Tables 3 and 4.

MIR604	Phosphomannose isomerase	Newly expressed protein
GA21	GA21	Event name
GA21	Modified 5-enolpyruvylshikimate-3-phosphate synthase enzyme	Newly expressed protein

## 3.4 Reference Publications

The search strategy is the same as the one that was previously validated with reference publications [REDACTED]

## **4.0 SUMMARIZING AND REPORTING THE DATA**

### **4.1 Selecting Publications**

#### **4.1.1 Database Records**

The process for selecting relevant publications is conducted in two stages. The first stage, Stage 1 requires a preliminary assessment of titles and abstracts. Those records that are clearly not relevant from reviewing the title only are excluded from further review. For those records that appear relevant or have unclear relevance, the abstracts are reviewed. A kappa test is performed after the Stage 1 review and before any discussion of abstracts over which there was disagreement by the reviewers. Those records that are clearly not relevant from reviewing the abstract are excluded from further review, while records that are relevant or have unclear relevance are reviewed in Stage 2.

Full-length articles are reviewed in Stage 2. An explanation of exclusion is provided for any full-length records that are deemed not relevant in Stage 2. Any relevant records identified in Stage 2 are subjected to reliability assessment and evaluation of the implications of the record on the food and feed, or environmental risk assessments.

Two independent reviewers examined the records for inclusion/exclusion for each eligible information/data requirement at all stages of review. During the preliminary assessment process (Stage 1), only records that were deemed clearly not relevant by all reviewers were excluded from further review. This conservative approach ensured that all potentially relevant records were evaluated until they were deemed to be either relevant or clearly not relevant in Stage 2. Following the Stage 1 reviews, reviewers scored the records as either 1) relevant or unclear relevance, 2) clearly not relevant.

#### **4.1.2 Internet Records from Key Organizations**

The records returned from searching the websites of key organizations were considered relevant if they were risk assessments, scientific opinions/reports concerning the commercial release of GMO being examined or documents on the biology of the crop of interest sponsored by the key organization. The regulatory agency webpages that were searched do not post primary data; therefore, all other document types were not considered relevant. The eligibility/inclusion criteria do not include risk assessments/dossiers submitted to regulatory authorities, only risk assessments performed and reported by relevant key organizations. Documents must have been authored by the key organizations and not the applicants to qualify as relevant.

The format of records returned from regulatory agency websites does not often meet those (i.e., title and abstract is not often provided) required to assess them using the 2-stage process followed for the database records. Those websites at which the records are published in English were assessed by two independent reviewers. Due to their format, internet full-text documents were assessed to determine their relevance in stage 2 only. For those websites where the records are not published in English, the results were translated into English and two independent reviewers determined if it met the criteria for inclusion.

The rationale for exclusion was provided only when records were classified as one of the relevant document types and were authored by the agency and excluded based on other eligibility criteria.

The following process applied to the types of internet agency documents described below. We defined a unique internet record, for the purpose of reporting the statistics, as a unique URL. Documents clearly labeled as draft or with a line for a signature that is blank were not reviewed and were classified as not relevant. If the URLs for two documents were identical except for file format (e.g., pdf versus .doc or .docx), one of the documents was considered a duplicate document and it was excluded from statistical accounting. For the group of relevant records, it was confirmed that there were no duplicate records in that group by visual examination.

## **4.2 Results of the Publication Selection Process**

For electronic bibliographic databases, the date on which the search was conducted, the date of the most recent update of the database, the service provider used, date span of the search, any limits applied to the search (e.g., study types, dates, languages) and the total number of records retrieved across all databases was recorded (Table 9). The records were de-duplicated after combining records retrieved from all the databases. Additionally, the line-by-line strategy with the number of publications identified per line was presented in the final report. See Appendix A.

Of the 190 records reviewed from the databases at Stage 1, both the reviewers agreed to exclude all of the 190 records. This yielded a kappa test score of 0. Because of the format of documents retrieved from internet searching of key organizations (i.e., title and abstract is not often provided) the kappa test was conducted only on the output of the database search. Since all of the 190 records were excluded, no subsequent steps of reviews were carried out and no tie breaker review was needed.

For records from websites, the following were recorded (if available): the website name and service publisher used, justification for choosing the source, the URL, the date on which the search was conducted, the date of the most recent website update at the time it was searched, the date span of the search, the search terms used, any limits to the search, and the number of relevant records retrieved (Table 10). The results of the selection process from both database and internet searches are recorded in Table 11.

Of the 22 records reviewed from the internet records from key organizaions, both the reviewers agreed to exclude all of the 22 records (Table 12).

## **4.3 Relevant Publications**

The reviewers determined that zero publications were relevant for this scoping review.

## **4.4 Excluded Publications After Detailed Assessment of Full-Text Documents**

The reviewers determined that zero publications from the review were relevant for this scoping review. All 22 records reviewed from the internet records from key organizaions were excluded and listed on Table 12 with the reasons given based on eligibility/inclusion criteria (Table 3).

#### **4.5 Unobtainable Publications**

No publications were considered unobtainable.

#### **4.6 Unclear Publications**

No publications were considered unclear.

#### **4.7 Full-Text Documents**

No publications were considered relevant for full-text documents.

#### **4.8 Implications of Relevant Publications on Risk Assessment**

No publications were considered relevant for full-text documents.
