

22ND eHEALTH NETWORK MEETING 7 NOVEMBER 2022, BRUSSELS, BELGIUM

COVER NOTE

5 Update on EHDS related activities

1. Issue at stake

The Commission has adopted the proposal for the Regulation on the European Health Data Space (EHDS) (COM/2022/197 final) on 3 May 2022.

The proposal contains rules on improved access of patients to their own electronic health data, interoperability and security requirements for manufacturers of electronic health records systems, as well as rules on secondary use of electronic health data for research and innovation and regulatory purposes. On governance, the proposal envisages setting up the EHDS Board, which will replace the eHealth Network in its current form.

MyHealth@EU is expanding the services, connecting more and more countries in Europe and is developing citizens' access to their data.

HealthData@EU will pilot the use of health data for research, innovation and policymaking, setting the basis for a new decentralised EU-infrastructure for secondary use to support cross-border projects.

A strategic overview of on-going activities will be presented.

2. Summary

The Commission will provide a short update on the state of play of the EHDS proposal and other EHDS related activities.

3. Format of procedure in the meeting

No action required from eHN members, point for their information. There will be sufficient time reserved for MS to ask questions.
