

## 24<sup>TH</sup> EHEALTH NETWORK MEETING 1-2 JUNE 2023, STOCKHOLM, SWEDEN

### COVER NOTE

#### 3.1 State of Play, KPIs and Roadmap (for information)

##### 1) Introduction

The MyHealth@EU infrastructure has been live since 2019. Currently, 11 Member States are connected to MyHealth@EU and many more countries are receiving direct grants to establish National Contact Points for eHealth (NCPeH) and deploy one or more services. Currently, there are 3 services that are supported by the infrastructure: Patient Summary, ePrescription and Original Clinical Documents. In addition, new services are expected to be launched in the coming years: laboratory results, medical images and imaging reports as well as hospital discharge reports. These services are being expanded on the basis of eHN guidelines and Change Proposals. In addition, a pilot project on patient access to their translated health data has been launched in January 2023 and will run during eighteen months.

##### 2) Issue at stake

On the one hand, the KPIs monitor the performance of the MyHealth@EU services, which are gradually expanding. While the number of ePrescription transactions shows a steady increase, the number of Patient Summary transactions is stalling. The KPI taskforce continues to work towards further improvement of the KPIs.

On the other hand, the roadmap shows the strategic developments for MyHealth@EU over the next few years. The proposed EHDS regulation provides the long-term vision for MyHealth@EU but is still under negotiations. The timeline for adoption remains therefore uncertain. The upcoming Joint Action on primary use will provide important support for the implementation of EHDS regulation. In addition, a new contract on Capacity building, which is included in the roadmap, will provide Member States an opportunity to exchange experiences related to the implementation of digital health services and strengthen their national infrastructures. CEF and EU4Health grants provide investments for the setting up NCPeHs and deployment of services at national level. Finally, the implementation of new services (laboratory results and reports, hospital discharge reports, medical images and image reports) is currently under discussion in the eHN (guidelines) and eHMSEG (change proposals and specifications).

##### 3) Summary

The MyHealth@EU infrastructure continues to expand, both in coverage and in services. The KPIs demonstrate the performance of the services is increasing on different aspects but the uptake of the services remains limited. The roadmap shows the strategic developments in the years ahead.

##### 4) Format of procedure in the meeting

This agenda point is for information.
