3.2 Overview of current means to build MyHealth@EU

How PATHeD and POTENTIAL contribute in MyHealth@EU

These two independent, however closely related projects will open up new possbilities by involving citizens in the management and control of their health data, adding new functionalities to the existing infrastructure.

The market analysis and the development of business requirements in the PATHeD project have resulted in a common platform that can also guide future developments, putting people at the centre and built around six solid pillars:

1. EU – Regulation
2. MyHealth@EU infrastructure in the eHealth Ecosystem
3. Reuse2Advance
4. Communication-Dissemination-Education
5. eID
6. Power to the People

PATHeD focuses on displaying the Patient Summary on citizens' mobil devices translated into a selected European language for presentation to a health professional. The project will end on 30 June 2024 with a test and evaluation of deployment of the mobile app in six Member States.

The eHealth Use Case of POTENTIAL will apply the new EUDI Wallet for ePrescription. The PID function will provide uniform patient identification method across pharmacies in Europe, and the wallet will store and display information of ePrescriptions that will be finalised in June. The project will be completed on 31 March 2025 with the evaluation of the pilot deployment of the EUDI Wallet application in nine Member States.

1) **Format of procedure in the meeting**
