

25TH EHEALTH NETWORK MEETING 28 NOVEMBER 2023, BRUSSELS

COVER NOTE

4.2. State of Play, KPIs, and Roadmap ahead (*for information*)

1) Introduction

The MyHealth@EU infrastructure has been live since 2019. Currently, 12 Member States are connected to MyHealth@EU and many more countries are receiving direct grants to establish National Contact Points for eHealth (NCPeH) and deploy one or more services. Currently, there are 3 services that are supported by the infrastructure: Patient Summary, ePrescription and Original Clinical Documents. In addition, new services are expected to be launched in the coming years, starting from 2024 to 2026: laboratory results, medical images and imaging reports as well as hospital discharge reports. These services are being expanded on the basis of eHealth Network guidelines and Change Proposals. In addition, several pilots will support MyHealth@EU infrastructure. PATHeD, the pilot project on patient access to their translated health data, has been launched in January 2023 and will run during eighteen months. The POTENTIAL project is developing the display of a translated version of eP/eD envisioning also additional user experience for personal health record and digital wallet use. The Vaccination card project will promote the enhancement of MyHealth@EU taking as a basis the EU DCC example and widespread use of smartphones/QR code technologies.

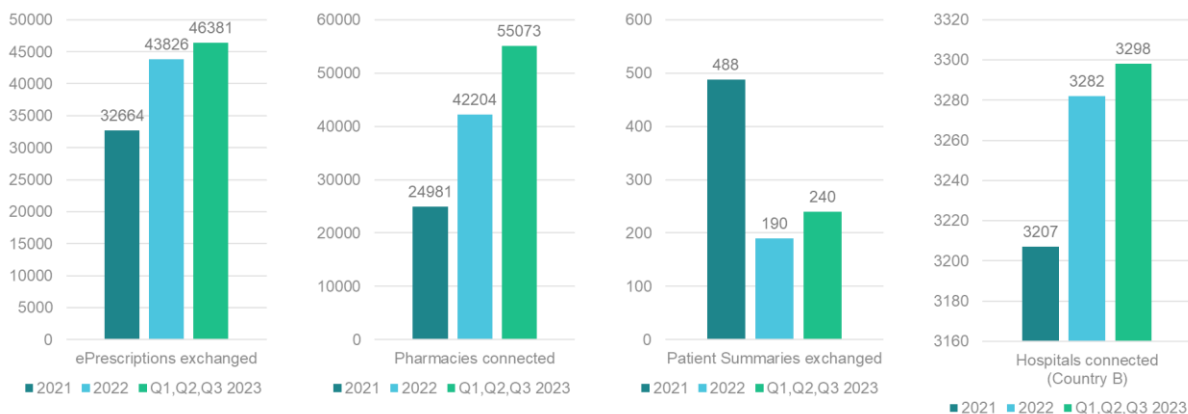

2) Issue at stake

On the one hand, the KPIs monitor the performance of the MyHealth@EU services, which are gradually expanding. While the number of ePrescription transactions and pharmacies connected shows a steady increase, the number of Patient Summary transactions is slightly

increasing from 2022, however the exchange is still really low compared to expectations. The number of hospitals connected greatly increased. Currently 75.7 million citizens can benefit from MyHealth@EU. The KPI taskforce continues to work towards further improvement of the KPIs.

Below the KPIs reported between 2021 and Q1-2-3 2023 across eP/eD and PS exchanges as well as the number of connected points of care (pharmacies and hospitals).

On the other hand, the roadmap shows the strategic developments for MyHealth@EU over the next few years. The proposed EHDS regulation provides the long-term vision for MyHealth@EU but is still under negotiations. The timeline for adoption remains therefore uncertain. The upcoming Joint Action on primary use will provide important support for the implementation of EHDS regulation. In addition, a new contract on Capacity building, which is included in the roadmap, will provide Member States an opportunity to exchange experiences related to the implementation of digital health services and strengthen their national infrastructures. CEF and EU4Health grants provide investments for the setting up NCPeHs and deployment of services at national level.

Laboratory Results guidelines were adopted last year, while the first drafts of the Hospital Discharge Reports (HDR) and Medical Images guidelines have been presented during the last eHealth Network meeting, and a second version will be presented to the eHealth Network based on consultations and recommendations provided by MS and key stakeholders. The process of both the public national and EU-level consultation of the HDR Guidelines and Medical Imaging Studies and Reports Guidelines started on 19th June 2023 and was really successful, a lot of comments were processed by the Sematic and Tech IOP Subgroups.

3) Summary

The MyHealth@EU infrastructure continues to expand, both in coverage and in services. The KPIs demonstrate the performance of the services is increasing on different aspects but the uptake of the services remains limited. The roadmap shows the strategic developments in the years ahead.

4) Format of procedure in the meeting

EUROPEAN COMMISSION

DG HEALTH AND FOOD SAFETY

DG COMMUNICATIONS NETWORKS, CONTENT AND TECHNOLOGY

eHealth-units
