

19TH eHEALTH NETWORK 3 JUNE 2021, BRUSSELS, BELGIUM

COVER NOTE

4.1 Progress on eHealth Digital Service Infrastructure ePrescription and patient summary use cases implementation

1. Issue at stake

To present to MS the scope of the call for grants from the EU4Health Programme to enlarge the geographic coverage and scope of MyHealth@EU (eHealth Digital Service Infrastructure - eHDSI).

2. Summary

Once set up, a National Contact Point for eHealth (NCPeH) has the ability to exchange different types of data, both structured and unstructured. The eHDSI is being enhanced with new use cases to ensure reusability of the infrastructure put in place and to further empower the citizen's access to data. At the same time, Member States should continue their work on broadening the coverage of eHDSI and the scope of the system (Figure 1).

In Q4 2021, the European Health and Digital Executive Agency (HaDEA) will launch the call for grants from the EU4Health Programme (indicative 11 mil EUR) for Member States to enlarge the geographic coverage and scope of MyHealth@EU (eHDSI).

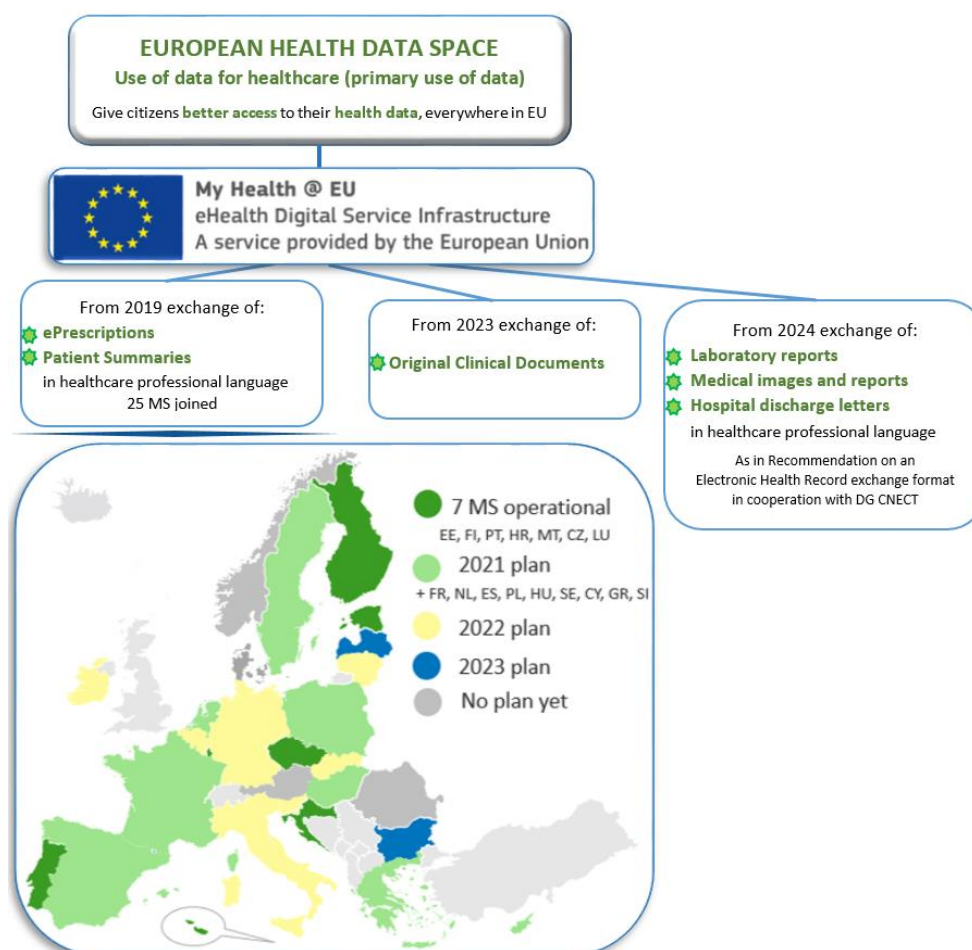

There will be one call where Member States will be able to apply to achieve at least one of the following aims:

1. Set up National Contact Point for eHealth to aggregate the patient information from national electronic health records or other infrastructure and share it cross-border (for Member States which haven't yet committed to set up NCPeH);
2. Deploy the ePrescriptions (eP) and patient summaries (PS) in Member States that have not yet launched these services;
3. Launch new services in all the Member States:
 - Exchange of unstructured documents:
 - Original Clinical Documents
 - ⇒ Member States can apply only if they have commitment to deploy ePrescriptions and/or patient summaries – use case is already included in the eHDSI Wave 5 specifications.
 - ⇒ Member States can apply only if they will also apply to deploy at least one of the below exchange of structured documents use cases.
 - Exchange of structured:
 - medical images and image reports;
 - laboratory results;
 - hospital discharge letters.

- ⇒ Member States with commitment to deploy the NCPeH can apply for any of those cases. Functional, technical and semantic specifications will be developed by the X-eHealth project and implemented in the eHDSI (technical implementation will be developed by the open NCP community).

Countries without commitment to set up NCPeH							
AT, DE, RO, DK, NO							
Countries <u>without</u> commitment to set up the eP and/or PS services							
LU	eP B	PL	PS A, PS B	BE	eP A, eP B	NL	PS A, eP A, eP B
MT	eP A, eP B	FR	PS A, eP A, eP B	SE	PS A, PS B	SK	PS A, eP A, eP B
