

eTranslation

Connecting Europe

CEF eTranslation's main goal is to help European and national public administrations exchange information across language barriers in the EU, by providing machine translation capabilities that will enable all Digital Service Infrastructures (DSIs) to be multilingual. Public administrations, citizens and businesses in the EU will thus be able to use digital services in the language they choose.

While CEF eTranslation is mainly intended to be integrated into such digital services, it also offers useful stand-alone services for the translation of documents or text snippets.

Benefits

Machine Translation

- Draws upon decades worth of work by EU translators (over 1 billion sentences in the 24 official EU languages), thus capable of understanding specific EU policy and legal terminology;
- Designed to retain the format of structured documents;
- Can translate multiple documents into multiple languages at once.

Confidential and secure

- Unlike other systems, eTranslation passes the Intellectual Property Rights back to the owner of the original text submitted for translation.

Cross-border Information Exchange

- Allows for the exchange of information and access to online content and services across borders in any of the supported languages.

Continuity and Quality of Service

Who is involved?

European Institutions & National public administrations

eTranslation can be integrated into digital services to guarantee support in all the languages of the European countries participating in the CEF programme.

Officials working in EU public administrations

Documents can be submitted to the stand-alone translation service to make day-to-day work easier.

Language resource holders

Through the European Language Resource Coordination (ELRC) initiative, the Commission is looking for language resource holders who are willing and able to contribute to improving the translation engines.
