

eSignature

Connecting
Europe

Facilitating public administrations, businesses, and citizens to sign electronically any document, anywhere in Europe, at any time.

eIDAS: a new era for e-signatures in Europe

The eIDAS Regulation establishes an European legal framework for e-signatures, e-seals and the Trust Service Providers that offer related services.

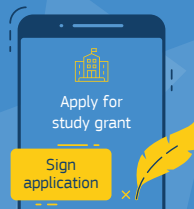

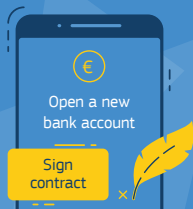

Defines three e-signature levels: basic, advanced and qualified e-signatures.

Distinguishes between e-signatures for use by natural persons and e-seals for use by legal persons (e.g. businesses).

Supports technical and legal cross-border interoperability.

Qualified e-signatures and e-seals

Qualified e-signatures meet high standards of security and are legally equivalent to handwritten signatures.

CEF eSignature building block

The eSignature building block of the Connecting Europe Facility (CEF) helps public administrations, businesses and citizens sign electronically through a number of practical supporting services.

DSS open-source library

Need to build a signing solution?

Build your signing solution around the DSS library and enjoy out-of-the-box compliance with the eIDAS Regulation and related standards.

Trusted List Browser

Need a secure certificate?

Find your provider of qualified certificates for e-signing, e-sealing or website authentication. There are more than 100 available providers of certificates and other trust services, such as e-delivery or timestamping.

E-sig validation tests

Need to test your signing solution?

Test the conformance of your solution to the eIDAS Regulation and related standards using the e-signature validation test cases.
