AS4 Message Exchange Protocol – Helping You Secure Data Exchange Regardless of Sector ©Pixabay The secure exchange of data across borders is a prerequisite, for not only the Digital Single Market, but also any trans-European initiative, such as the develo...

Building the digital single market

The digital arm of the Connecting Europe Facility improves daily lives of European citizens via investments in digital building blocks, cross-border digital infrastructures and broadband networks. It facilitates the cross-border interaction between public administrations, businesses or citizens. It promotes economic growth and supports the completion and functioning of the internal market, enhancing the competitiveness of the European economy. CEF supported projects help create and maintain a European ecosystem of interoperable and interconnected digital services, and thus help sustain the Digital Single Market.

apps

Use a Digital Building Block

Reusable digital building blocks that help public and private sector teams deliver digital services faster and comply with regulation.

Secure digital public services

We can only get the best out of the opportunities offered by digital tools, online networks and digital services if we trust them. People may hesitate to use digital services if they are not confident that they are reliable, safe and secure.

Europeans still face barriers when using (cross-border) online tools and services. This means that citizens miss out on goods and services and businesses miss out on market potential, while also governments cannot fully benefit from digital technologies. The EU's Digital Single Market aims to overcome these challenges by creating the right environment for digital networks and services to

flourish. This is not only achieved by setting the right regulatory conditions, but also by providing cross-border digital infrastructures and services.
